INCUBATORS VERSUS HENS.
Reasons Why the Former Are Better For Hatching Purposes.
The day is past when the extensive poultryman tries to hatch with hens, as the way is entirely too slow. By the old way when he wanted to set 100 or 200 eggs, as the case might be, he had to find nine or eighteen broody hens and as many separate nests. Then they must each be tested with artificial heat to see if they all really were in earnest, and this took nearly a week, and consequently this much time was lost.
The incubator saves this time, and one will do the work of all these hens. Then after the hens were set they must be fed and watered daily and let out for exercise for at least fifteen or twenty minutes, and then their keeper must see that each one gets on her own nest. This must be done daily for about twenty-six days, including the test days, and yet I have said nothing about dusting for lice and the washing

of some of the eggs which are sure to become dirty and the repairing of nests as a further result.
If all hens would behave just alike, the task would not be quite so hard, but they will not, as some are over-anxious and continually fuss and turn their eggs and break them in their efforts to do well, no matter what kind of nest they have. The incubator is not subject to this failing, but stays quietly in its place, and no broken eggs or crushed chicks are found. The best incubators require but five or ten minutes' attention daily and can be kept in a room of the dwelling or outshed near by and can be looked after very easily, while a sitting hen is such a disagreeable thing that she is best kept at a distance. The incubator has another strong point in its favor from the fact that it is willing to sit when wanted, and this is a matter of no small note, as the chick that is ready for sale when broiler prices are highest is the money maker of the market chicken, while the early pullet is the winter egg producer and prize taker at the fair in the fall.
Of a certainty if you use incubators as hatchers you must use brooders as mothers, and this leaves the hens entirely free to do their best instead of running and eating with chicks and laying up fat which ought to go toward filling the egg basket. Chickens raised by artificial means escape the chance of being filled with lice before they are fairly out of the shell and being trampled to death by the mother hen and living in dirty quarters, for one hen will make more dirt in a day than twenty-five young chicks.—F. Baugle in American Poultry Journal.

Uricosol Cures Rheumatism
Uricosol is a uric acid solvent—that is, Uricosol dissolves the excess of uric acid in the system and eliminates it, curing rheumatism.
Uricosol does this without injuring any part of the body—in fact it aids the stomach, creates an appetite, stimulates the intestinal glands—has a healthy action on the liver. Uricosol is very effective in chronic rheumatism for it can be taken without injuriously effecting any part of the body.
For sale at \$1.00 a bottle by all druggists, or sent prepaid to any address upon receipt of price. Address all communications to Uricosol Chemical Co., 270 West of Mississippi to Los Angeles, Cal. East of Mississippi to P. O. Box 481, Atlanta, Ga.
Uricosol Chemical Co., Atlanta, Ga. Los Angeles, Cal.

A Useful Alarm Clock.
Walter Bernard has secured a small tract of land a few miles east of Olympia, Ore., and stocked the place with a few dozen chickens. As he is compelled to be away from his home during the day he studied out a scheme for caring for his chickens during his absence.
In each yard he had erected troughs to hold food for the hens, and these troughs are connected by wire with his house. Within the house Mr. Bernard has connected the wire with an alarm clock with the usual battery attachment.
When he leaves home in the morning he sets the alarm clock at the hour for feeding the chickens and by an ingenious arrangement when the time arrives the alarm goes off, the connecting wire releases the troughs and the chickens make a rush for their food, which is spread before them as if Mr. Bernard did the job in person.

The gladness of the dawn.
Though but a single note were mine,
If I with music ran.

Weak?
"I suffered terribly and was extremely weak for 12 years. The doctors said my blood was all turning to water. At last I tried Ayer's Sarsaparilla, and was soon feeling all right again."
Mrs. J. W. Fiala, Hadlyme, Ct.
No matter how long you have been ill, nor how poorly you may be today, Ayer's Sarsaparilla is the best medicine you can take for purifying and enriching the blood.
Don't doubt it, put your whole trust in it, throw away everything else.
\$1.00 a bottle. All druggists.
Ask your doctor what he thinks of Ayer's Sarsaparilla. He knows about this grand old family medicine. Follow his advice and we will be satisfied.
J. C. AYER CO., Lowell, Mass.

or constipation is shut up in a small coop and given two grains of colicel at night, followed by one grain quinine pill night and morning for two or three days. If there is any discharge from nostrils, a few drops of camphorated oil is injected into each nostril. If any improvement is manifest in two or three days, they are removed to a small room and a solution of compound added to the drinking water. They are kept here for a week or two, or until they show a complete recovery. If, on the other hand, after two or three days' observation and treatment no improvement is manifested, the bird is killed and buried.—Cor. American Agriculturist.

When the life of Mrs. Ruff was hanging in the balance she used Dr. Pierce's Favorite Prescription and was restored to health. Her experience made her the firm friend of the medicine that cured her.
Dr. Pierce's Favorite Prescription has no equal in its cure of womanly diseases. It establishes regularity, dries the drains that weaken women, heals inflammation and ulceration and cures female weakness.
"Five years ago when my life was hanging in the balance, Dr. Pierce's Favorite Prescription was brought to my home," writes Mrs. Caroline Ruff, Director of the Grand Orphan's Home, residing at 35 Rowan Street, Detroit, Mich. "I took it, and I went me back to health. Ever since that time, I have been its firm friend. I frequently have mothers come to our 'Home' who are suffering with uterine troubles, inflammation, tumors and ulcerations. One great remedy for a female trouble is Dr. Pierce's Favorite Prescription, and we have found nothing so far which would so quickly cure the disease, relieve inflammation and stop pain. It is a good friend to women."
Dr. Pierce's Common Sense Medical Adviser, in paper covers, is sent free on receipt of 21 one-cent stamps to pay expense of mailing only. Address Dr. R. V. Pierce, Buffalo, N. Y.

We are Opening
Now the most complete line of spring goods that it will be your pleasure to see this year. These goods are all from the manufacturers' direct to our counters.
BROWN & ELLIS
DALLAS
Shoes:
We have now in stock the most satisfactory line of shoes that was ever seen in Dallas. Especially strong in children and misses lines. From Middlesex Manufacturing company, Boston.

Horticultural Notes.
A perpetual blooming form of the popular Crimson Rambler rose is reported from France.
The American Rose society's next exhibition will be held in Philadelphia March 24-25.
Queen of Edgely and Mrs. Oliver Ames are listed for the first time among varieties of roses for which prizes will be awarded by the American Rose society.
It is expected that the horticultural exhibit at the St. Louis world's fair will be the most extensive and best ever made at any exposition.
The new rose Ideal is a bright, clear pink, a sport from La France.
Acahypha bicolor compacta is said to be an exceedingly handsome new budding plant, with unsurpassed color and markings.

The Seed Plant.
An excellent box in which the seeds for early flowers can be sowed is about 15 inches long, 15 inches wide and 3 1/2 inches deep. This box can be placed in the window beside the cutting box. A good soil for the seed box is made of three-fourths soddy loam and one-fourth sand. This mixture gives a soil that drains well and does not run together after it has been watered a few times.
In this box can be sowed pansy, verbenas, petunia, snapdragon, sweet alyssum, Salvia splendens or seeds of any other similar plants that will stand transplanting and are desired for early blooming. Enough plants can be grown in a box of this size to supply a good sized flower garden.

THE STRAWBERRY PLANT.
Not So Cold Blooded After All—Result of Early Mulching.
The figure from Rural New Yorker shows a strawberry plant which T. C. Kevitt of New Jersey dug on Jan. 10. Mr. Kevitt claims that this plant is a strong argument in favor of his plan of mulching before the ground is frozen. He put on a heavy coat of stable manure before a crust formed on the soil.
THE STRAWBERRY PLANT.
This prevented the ground from freezing solid, and the plants kept on growing. Of course this has been an unusual winter, and the soil would have frozen solid in most seasons, yet the early mulching will keep the soil open for some weeks in any season.
The strawberry is called a "cold blooded" plant because it endures much hard weather, but that is no sign that long continued freezing does it any good. The old idea was to mulch so as to keep the frost in the ground and prevent the heave and settle which go with freeze and thaw. It is pretty evident that considerable damage will be done by the light freezing in autumn before the ground freezes solid, by putting the mulch on early we prevent this.
A Beautiful Mixed Border.
A mixed border provides an excellent manner of obscuring the view of a vegetable garden and at the same time giving a brilliant and always interesting aspect to a garden walk. Gardening describes one such border as follows: The back row in the border is of tall growing canna, such as Florence Vaughan, Charles Henderson, Kate Gray, Italia, Austria and Crimson Bedder. Next in front of the canna come Salvia Bouffre, Pennsylvan ruppellii and Abutilon Souvenir de Bonn, planted in masses. Phrygium variegatum, Centaurea gymnocarpa, acalypha, irises, arcyranthus and geraniums in variety occupy the third group, while the immediate foreground is made up of low growing subjects, such as Ageratum Bianche and Blue Perfection, Begonia Vernon and Erfordii, Zinnia haageana, Centaurea caudiciformis and sweet alyssum. Abundant watering and constant trimming, weeding, etc., are of course indispensable. The penultimate above mentioned is worthy of more general cultivation. Seed may be sown in January in shallow boxes, transplanted into two inch pots and planted out of doors in May.

Trolley Lines and Farms.
Some of the latest trolley road enterprises are likely to be of special benefit to small towns. Most of the earlier electric roads were built parallel to steam lines, connecting only the cities and large towns already provided with railroad facilities, and directly useful to such farmers only who happened to live on or near the line of the road. But most of the main towns being already connected, there is now a tendency to reach out and secure the business of the farming towns which have never had a railroad of any kind. Already in western Massachusetts, in Connecticut and in parts of Maine new roads are branching out in all directions, bringing new life to lonely communities and serving as feeders to the steam roads and the main street lines. Many new projects are not street lines at all, but go straight over the fields and meadows, making cuts and fillings when needed at considerable cost. Such lines are capable of high speed and regular service. Many a town will enjoy good passenger facilities and often a freight, mail and express service by the construction of an electric road where a steam road could never hope to do a paying business.—American Cultivator.
Lime and the Land.
Lime makes the father rich and the son poor is an old saying. Lime makes the nitrogen in the soil available, and if I have nitrogen there I am going to put the lime in and get it out, and if my boy wants more nitrogen he can put it in.—E. B. Voorhees, New Jersey.
