the familiment of its mission for the abilities are that your buttons brotherhood of man. If the American manufacturer can

stand Parry, organized labor certainly can stand him. He is dangerous only to his friends and associates; to those he chooses to treat as enemies he is perfectly harmless. He cannot open his mouth without injuring his own cause. He is a ranter, intemperate and bigoted, ignorant of the history of labor and the emancipation of industry. Even the element he represents in a measure recognizes the inexpediency of him that he is too radical.

Wandby Is Well Qualified. "The promotion of William S. Waud-by to be commissioner of labor, if it shall be brought about by the active co-operation and demand of the labor forces, will be strictly in keeping with the civil service principles of which the president is a well known advocate," writes a Washington member of the typographical union, of which organization Mr. Wandby is also a member. "MY. Wandby has been a special agent of the bureau of labor for about eight years and is thoroughly familiar with the problems presented. We, as workingmen, want a commissioner of inbor who will be to his peculiar field what the commissioner of Indian affairs is to the Indians, what the commissioner of indian affairs is to the Indians, what the commissioner of indian affairs is to the Indians, what the commissioner of indian affairs is to the Indians, what the commissioner of indians in the c missioner of pensions is to the pensioners, what the commissioner of patents is to the inventors, what the nce is to matters pertaining to public lands, what the commissioner of education is to education—a man interested in the particular work covered by his sphere of action. We ought to have

A SOLAR MOTOR.

Possibly a Practical Solution of the Many attempts have been made at various times to use solar heat as a source of power. A century or more ago great burning glasses were constructed both in France and England which developed a heat intense enough to meit iron, gold and silver. At the Paris exposition of 1878 an exhibit that attracted much attention was a sun engine which furnished the power for a printing press.

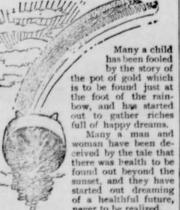

At last a practical solution of the problem seems to have been reached. There has been set up on Edwin Cawston's ostrich farm at Pasadena, Cal., a contrivance which performs its work regularly and with certainty. From one hour and a half after sunrise to half an hour before sunset it drives a ten horse power engine, raising fourteen hundred gallons of water twelve feet per minute. This is enough to irrigate about 500 acres of deciduous trees or 300 acres planted with orange trees.

The solar motor is in shape like a section of a huge umbrella of very substantial construction, having a diameter of twenty-three feet at its widest part and of fifteen feet at its narrowest. The whole inside surface is covered with mirrors, each two feet long by three and one-half inches wide, Nearly 2,000 of these long, narrow mirrors catch the sun's rays and reflect their heat upon a slim boiler just where the handle of the umbrella would be.

The great reflector is set like an as tronomical telescope. It is so nicely adjusted that one person can easily move it in either direction. The boiler is thirteen and one-half feet long and holds 100 gallons of water. When the reflector is not working, the boiler is quite inconspicuous, but when the concentrated heat from the mirrors is focused on it it gleams like polished silver. In a little while it becomes so hot that a stick held against it smokes and bursts into fiame. In about an hour steam is generated and is conveyed from the head of the botler through a flexible metal pipe to the cylinder of the steam engine, being thereafter used in the ordinary manner.-Sunset Magazine.

Buttons That Grow. No. the ivory buttons you wear do a the wilds of Africa, your pearl butions were probably never nearer than no rubber tree was ever tapped to produce the hard rubber buttons that dorn your overcoat. Down in Central to remain in the nut long enough becomes indurated and turns into subused in America, whether termed ivory, pearl, rubber, horn or bone, come from this ivory plant. Thus the probmade from a vegetable milk, and they grow on bushes.

credit for.
"In consulting with my druggist he advised McEirce's Wine of Cardui and Thedford's Black-Draught, and so I took it and have every reason to thank him for a new life opened up to me with restored health, and it only took three months to cure me."

Wine of Cardui is a regulator of the enstrual functions and is a most as-nishing tonic for women. It cures tonishing tonic for women. It cures scanty, suppressed, too frequent, irregular and painful menstruation, falling of the womb, whites and flooding. It is helpful when approaching womanhood, during pregnancy, after childbirth and in change of life. It frequently brings a dear baby to homes that have been barren for years. All druggists have \$1.00 bottles of Wine of Cardui.

met, according to the London Chron icle, a king who is more of a Stuart than himself. Both are descended wicks, when the Stuarts were evicted. | tin cup, a clam shell, a saucer youngest child of Charles I. But she was not a Protestant and so was debarred. Thus it was that the British crown was passed to the house of Brunswick by the act of settlement in not represent the death of an elephant 1701. Otherwise the Savoys would now be the royal family.

nollusk and the probabilities are that The famous walking match from London to Brighton held by the members of the London Stock Exchange on America there is a fruit producing interesting costumes. One broker start-May 1 brought out some varied and paim that has quite metamorphosed the button business and formed the nucleus for one of the most important industries in the United States. The seed of this fruit contains a milk that seed of this fruit contains a milk that is sweet to the taste and relished by tweeds. A very few wore knickerthe natives. The milk when allowed bockers and a majority were regular running sults. The winner, E. Broad, did the fifty-two miles in 9h stance as brittle and hard as the ivory 30m, and 1s. The amateur record is from the elephant's tusk. The plant that produces these nuts is called the 54m. and 16s.

Belgium's Military System.

tablished on the basis of voluntary conscription, has already proved a fail-Notwithstanding the active efforts of the enlistment committees but few-volunteers have come forward during the last year, and over half of the men who offered their services were found upon examination to be physically unfit for military service. According to local military authorities, the small pay given is the main cause of the unpopularity of the service, the soldier getting only a franc a day.

THE MELON PLANT LOUSE. Carbon Bisulphide the Remedy-How

to Apply It. From observation and correspondence it appears that the melon plant louse prefers watermelon vines to those of other cucurbits, though it is by no means uncommon on muskmelon, cucumber and squash vines. As soon as the young vines get four or six leaves they should be carefully and frequently examined for plant lice, and at the first appearance of the winged forms they should be fumigated with carbon bisulphide. It has been shown that carbon bisulphide will kill he melon louse without injuring the

The method of fumigation consists in covering the young vines with tight boxes or other covers twelve to eighteen inches in diameter and introducing from James I., but the king of Italy is under each box a vessel containing one also, through his mother, eleventh in descent from Charles I. In strict right phide. One teaspoonful should be al-Victor Emmanuel has more claim to lowed for every cubic foot of space unthe British crown than Edward VII. der the cover, and this will easily kill But for their Catholic religion the Savoys would have been installed to hour, though it will do no have to leave rule over England, and not the Bruns- the cover in place for an hour. A cheap After the children of James II., the open dish will answer to hold the carnext in blood was the Duchess of Savoy, daughter of Henrietta, the that the cover should fit snugly to the ground, either being pressed into the soil a little or having the loose earth pressed against its lower edge; otherwise the heavy vapors will escape from below and not fill the space above. Covers For Fumigating.

Satisfactory covers may be made from gasoline cans cut in two, each may be made from wood or paper, or, as suggested by the New Jersey experiment station, two barrel hoops may be used, one hoop being cut in two and the two halves being crossed so as to make a dome shaped framework over which heavy paper or cheap musin (the latter dipped in linseed oil) may be tacked and pasted and the cover thus made practically tight. With fifty or a hundred of these covers a field can be treated quite rapidly. It may be desirable to say a few words about carbon bisulphide. It is a colorless, volatile liquid with a disagreeable odor. Its vapor is heavy and about as inflammable as that of gasoline, a spark from a cigar or pipe being sufficient to ignite it. It is, however, no more dangerous in this respect than gasoline The vapor is also very poisonous to all animal life, but no one need fear inhaling small quantities of it in the open air. As purchased at drug stores carbon bisulphide is rather expensive, but if bought in fifty pound lots it can be secured for about 10 cents a pound.— J. J. Thornber, Arizona Experiment

Growth of Miners' Union S. M.
