ing, kalsoming and paper hanging.  
DALLAS, OREGON

**YOUNG CHICKS.**  
Some Points for the Farmer on Feeding and Care.  
Don't be in a hurry to feed the newly hatched chicks, no matter if they hatch rather unevenly. The ones first out will be all right for a couple of days at least. Their systems are full of yolk for some time, and too early feeding does harm rather than good. Have a little fine grit where they can find it as soon as they like.  
Bread crumbs soaked in milk are good for a start, but it is best to give them a scratching food after a day or two. Millet seed or coarse oatmeal scattered in gravel is a good food. They can be successfully raised with nothing but fine, dry grain; no soft food. But most growers prefer to give some soft food for variety. Unless there is plenty of grit it will be necessary to use soft food for the reason that coarse grain cannot be properly digested without plenty of grinding material.  
Young chickens in coops where the hen is confined do not usually get enough animal food. It is their natural

food, even more than grain, and nothing else will make them grow so fast. Milk not old is the best food, but if enough cannot be had fine meat scraps will be good and are convenient to use. Feed with every meal. Hardly one farm flock in ten gets enough animal food to keep it growing at full speed.  
The chickens should have time to get hungry. Don't have food where they can stuff themselves whenever they like and mope the rest of the time. Feed nearly but not quite all they can eat at a time and at regular hours. Poultry specialists feed often, but on a farm in summer it is difficult to feed more than three times a day, and chickens will do very well on three meals, if at regular times, each day.  
If the coops are on grass sward and moved daily a shallow box of sand should be kept inside. A little trough for each coop is a great saver of the soft food, and a chick fountain is a convenience. If saucers and tins are used a shingle float with a hole in the center will keep the chickens out of the liquid.—G. R. Fiske in American Cultivator.

Jim Dumps asserted, "Too much meat in summer causes too much heat. What shall we eat all summer long That, without meat, shall keep us strong, And in the best of summer trim? Why, 'Force,' of course," laughed "Sunny Jim."

**"Force"**  
The Ready-to-Serve Cereal  
the strength of meat without the heat.

Excludes Chops and Steaks.  
"Force" is a regular breakfast food in my family to the exclusion of chops or chops, the old standard.  
A. GIBSON.

**Holverson's SALEM'S BEST STORE**  
I know as the place where the best goods are sold for the least money. Up to date shop keeping is our aim. Slash dash, happy go lucky, win or lose methods do not go here. There is too much at stake. We are building business out of material that will last.

**HONEST GOODS HONEST PRICES HONEST SERVICE**  
Satisfaction in every instance or money refunded. Satisfaction is what you want. We tell the truth about our goods or will refund your money. If your purchase at Salem's best store does not prove entirely satisfactory, a chance to make it right is earnestly requested. Nothing is any bother to us if it results in satisfaction.

Mail Orders Will Receive Prompt Attention

REAL ESTATE DEALERS FARMS AND CITY LOTS  
Purchasing agent for W. C. McClure, of Saginaw, Michigan, and other eastern timber dealers. Room 1, up stairs, Wilson building.  
DALLAS - OREGON

**Hair Falls**  
"I tried Ayer's Hair Vigor to stop my hair from falling. One-half a bottle cured me."  
J. C. Baxter, Braidwood, Ill.  
Ayer's Hair Vigor is certainly the most economical preparation of its kind on the market. A little of it goes a long way. It doesn't take much of it to stop falling of the hair, make the hair grow, and restore color to gray hair. \$1.00 a bottle. All druggists.

**GROVE'S TASTELESS CHILL TONIC**  
Has stood the test of 25 years. Annual sale over 1,500,000 bottles. Does this record of merit appeal to you?  
No Cure... No Pay... 50 Cents...  
Enclosed with every bottle is a 10 cent package of Grove's BLACK ROOT LIVER PILLS.

E. W. Grover  
MUST APPEAR ON EVERY BOX OF THE GENUINE.

**How to Boil Water.**  
"To boil water would seem to be a very simple thing," says a writer in the Boston Cooking School Magazine, "and yet the late Charles Delmonico used to say that very few people know how to do it. 'The secret is,' he said, 'in putting good fresh water into a kettle, already quite warm, setting the water to boiling quickly and then taking it right off for use in tea, coffee or other drinks before it is spoiled. To let it steam and simmer and evaporate until the good water is in the atmosphere and only the lime and iron and dregs left in the kettle is what makes a great many people sick, and it is worse than no water at all. For water boiled like this and flavored with a few drops of lemon juice Mr. Delmonico used to charge as much for his best liquors, and he often recommended it to his customers and friends who complained of loss of appetite. It is worth trying."

**How to Use Beef Marrow.**  
Beef marrow taken from the soup bones and round steak is excellent for cooking purposes. Cut it in small bits, put it in a covered small jar, set in a pan of water and place over the fire to simmer gently. When all melted, strain through a thin cloth into a clean pan, let settle for a few minutes, then press into small jars and tie securely. It will keep for months.

**How to Make Mayonnaise Dressing.**  
Mix together one teaspoonful each of mustard and salt, a few grains of cayenne and the yolks of two raw eggs. Add slowly one-half a pint of olive oil, two tablespoonfuls of vinegar and two tablespoonfuls of lemon juice. Just before serving add two tablespoonfuls of thick cream, whipped. The cream may be omitted, if preferred. Have everything cold, and set the bowl into a pan of ice water or chopped ice. Add the oil very slowly at first. After the first few tablespoonfuls have been added it can be added more rapidly.

**AN ILLINOIS BARN.**  
A Great Time and Labor Saver for the Cattle Farmer.  
We submit the plan of a cattle barn which we have used for three years and consider the best of any we have seen, write Eastman Bros., of Hancock county, Ill., in Broeder's Gazette. We obtained our plan from John Clark of Illinois, who has used barns like it for many years. The barn is 96 feet by 48 feet. It is a pole barn with posts 20 feet high, and a concrete 80 by 12 feet runs through the center of the barn. The lower boards of the crib are hinged and feed boxes built on level with the crib bottom so as to make practically a self feeder, especially when feeding shelled corn. Hogs sleep under the concrete.  
Hayracks on the sides are eighty feet long. Hay is put in at the ends of the

**THE EASTMAN BARN.**  
Sliding doors, controlled by weights, are used at the ends of the mow. They are closed when the hay is in the mow. There are doors alongside of the haymow. When filling the mow we have a space of four feet between the hay and the sides of the barn, which enables us to throw hay into the racks when feeding. The south end is open. The north end has doors which we close in bad weather. We have lots on the north, south and east of the barn and scales east of the mow, so we can weigh cattle any time.

**SWINE BREEDING**  
I have often heard it said that the runt pig will make the largest hog and this is the belief of many persons. While this is not true no doubt the belief originated from the custom of taking off the runt from the dam and setting it in a separate pen. It is better chance than its mates, says A. J. Legg in Stockman and Farmer. Sometimes it is the case that the runt pig has the principle in it to make the best hog, however, as it becomes the runt because it eats slower than its mates and when the food supply is limited it does not get a fair share and its mates get the start of it because they get more food. The longer they are kept together the greater the difference. If the runt is put by itself and allowed to eat at its leisure it masticates its food better and gives the best growth for food consumed than its stronger and more greedy mates would do. If given a chance it will soon outstrip its mates in growth and give some foundation for the belief that the runt makes the best hog. It makes the best hog really because it gets the best chance. However, in such cases it is a very good plan when one or two pigs are kept up in the pen to select the runts for this purpose, as they will usually make good hogs, but if left with their mates they will always remain runts. The

**Beginning With Pigeons.**  
In answer to the question, "How should I begin squab raising?" the pigeon editor of the Feather says: My advice is first build a nest house, say 10 by 12 feet, setting it up on brick piers about a foot from the ground, so as to avoid all danger from rats. Make the fly of wire netting 8 feet high, 10 by 14 feet. This will accommodate twenty-five pairs of birds. Make nests inside the house a foot square and nine inches high, having the bottoms removable for cleaning out. Keep sand on the floor about a quarter of an inch thick, and use a cheese box lid to feed out of and get a two gallon stone fountain for drinking water, a small box for salt, one for oyster shells and one for charcoal. Level the ground within the fly, and cover about four inches deep with clean, gritty sand—not gravel full of stones, but good sand. You are now ready to get birds. Get some one who knows how to purchase your stock—first class Homers, if possible, from some reliable breeder. Start with, say, five pairs of birds that are surely known to be mated, and study these birds until you become acquainted with them and have successfully raised several pairs of squabs, then add five or ten more pairs of birds as you prefer, but do not put any new birds in the house or fly until they are surely mated.

**The Mottled Moisture Question.**  
The question has often been asked me, "Would you recommend putting eggs into warm water to make it easier for chicks to break the shell?" and I do not put any new birds in the house or fly until they are surely mated.

**FREE.** Dr. Pierce's Common Sense Medical Adviser is sent free on receipt of stamps to pay expense of mailing only. Send twenty-one one-cent stamps for the book in paper covers, or thirty-one stamps for the cloth-bound volume. Address Dr. R. V. Pierce, Buffalo, N. Y.

**WINE OF CARDUI**  
Mrs. Laura S. Webb.  
Vice-President Woman's Democratic Club of Northern Ohio.  
"I decided the change of life which was fast approaching, noticed Wine of Cardui, and decided to try a bottle. I experienced some relief the first month, so I kept on taking it for three months and now I menstruate with no pain and I shall take it off and on now until I have passed the climax."  
Female weakness, disordered menses, falling of the womb and ovarian troubles do not wear off. They follow a woman to the change of life. Do not wait but take Wine of Cardui now and avoid the trouble. When you come to the change of life Mrs. Webb's letter will mean more to you than it does now. But you may now avoid the suffering she endured. Druggists sell \$1 bottles of Wine of Cardui.

**WINE OF CARDUI**  
fact that runts grow so well when given a show by themselves does not prove that a better pig would not grow equally well or better if given a chance. It is so natural with many hog raisers to neglect the shots that are running out on pasture in the summer, or, rather, it is such a confirmed habit, that it appears natural.

**Fat Hogs For Four Years.**  
The following was the monthly average price of hogs in the western and central states' markets during the first three months for four years, including this year:

	1900	1901	1902	1903
January	\$5.55	\$5.29	\$5.22	\$4.65
February	4.95	6.12	5.40	4.80
March	5.31	6.58	5.77	5.00

It will be seen that hogs brought better prices this year than during the past three, indicating the shortage which has been claimed to exist for some months past. The extreme range or top prices for choice lots went to \$7.10 in January, and \$7.55 in February and March.—Midland Farmer.

**Care of Breeding Sows.**  
The sows should have plenty of exercise at all times, especially after being bred. In summer they may be turned out to pasture, which should consist of barley, oats, peas and rape, with a little dry feed once a day to counteract the green forage. A little ground oats mixed with clean water or milk is good. In winter one feed of ground oats a day with plenty of water is sufficient. Oats tend to produce good growth of bone and muscle in the sows, as well as good strong litters.

**Demand for Breeders.**  
There is no necessity for a breeder of pure bred hogs sending any stock fit for breeding purposes to the slaughterer nowadays. There never was a better demand for breeding hogs than exists right now. Breeders who advertise are sold close to their limit. Those who cannot sell at good prices are those who do not let the public know that they have good hogs for sale. It pays to breed hogs, and it pays to let the public know it, not only in such times as these, but all the time.

**TRAIN AND TRACK.**  
Austria is to have a transcontinental railway from Adelaide to Port Darwin. The railway from Caracas to Valencia, fifty-five miles, has eighty-six tunnels. Berlin local trains now have special compartments for "passengers with dogs."  
The average cost per year of maintaining a locomotive is \$659 for shop labor and \$656 for roundhouse, the total being \$1,315.  
**JINGLES AND JESTS.**  
So Say We All of Us.  
When I was just a little boy  
My gran'ther used to say,  
"Just keep on growing, sonny, and  
You'll be a man some day."  
Ah, would my gran'ther could decess  
Another kind of joy,  
And I could grow the other way  
Until I was a boy!  
—Baltimore News.

**Mites Liked the Tobacco.**  
Our experience does not confirm the opinion of the many poultry writers who recommend tobacco powder or tobacco stems in nests to keep insect parasites away, especially chicken mites. Some years ago, having an unsalable crop of tobacco on hand, we made all their nests of tobacco leaves, satisfied that we would thereby exterminate mites. The result was the worst attack from these pests we ever suffered. They swarmed among the tobacco leaves by thousands. This tobacco was very strong Connecticut seed leaf and was cured a deep, dark brown; but it seemed that the stronger it was the better the mites liked it as a home.—Farm and Ranch.

**Chickens Entered the Ministry.**  
In an Ohio town the African Methodist Episcopal church of that district held a conference, and for a week the town was filled with colored pulpit orators. A few days after the conference closed its session one of the leading women of the town drove out to Pea Ridge to purchase chickens of an old mummy who had supplied the family for years. Aunt Hannah, coming to the gate, said: "I'm sorry, Miss Allie, I ain't got a chicken left. They all done enter de ministry."—Exchange.

**PEN, PENCIL AND BRUSH.**  
Mrs. Rosa Bonheur was seventy years old when she painted her best picture, "Horses Trampling Out Wheat."  
Mrs. Mary Holland Kinkaid, the author, is described as "a winning, frank spoken, attractive woman, who has led a strenuous life."  
Henri Willem Mesdag, the Holland painter, has decided to offer his famous collection of paintings to the Dutch people. The collection is valued at several million florins.  
The oldest author in England is Dr. Samuel Smiles, the author of "Self Help," who has just turned ninety. Dr. Smiles has now surpassed the age of Landor, who lacked a few months of being ninety when he died.

**The Distinction.**  
"I don't see what right you have to turn up your antennae at me," said the clam. "I am as good as you are."  
"I deny it," said the lobster. "Anybody can be a clam, but in order to be a lobster one has to be born a lobster."  
—Chicago Tribune.

**How He Did It.**  
He stammers painfully, and yet he's won the heart of Mary. The fairest of the forty maids That grace the sanctuary. But Madge, demurest of the lot Of forty winsome maids. Suggests a cause—"Perhaps," she says, "He stutters when he kisses."  
—Brooklyn Eagle.
