VOL. XXXII.

DALLAS OREGON DECEMBER 15, 1905.

NO. 3.

S a renovator of soil and as a food for stock, the cow pea is unsurpassed. To get the largest possible yield of cow peas from any given soil, a plentiful application of Potash is necessary.

The best methods leading to certain success are fully explained in the 65-page illustrated book, which we send free to farmers who write for it. It tells of the remarkable results attained with cow peas nourished upon Potash.

Address. GERMAN KALI WORKS, 93 Nassau St., New York.

complaisant. WINTER EGG PRODUCTION.

Polats to Observe In the Care and

The production of eggs is an easy matter in spring and summer, when the hens lay naturally, but to raise a summer product in the depth of winter is less easy of attainment, says A. V. pound, as compared with 51/2 cents in Meersch in Western Poultry Journal. There are two reasons why the "egg farmer" should make every effort to secure the production of as great a number of eggs in winter as at other seasons-first, because eggs are very much dearer in winter than in summer, and therefore the profits of the climate. year will largely depend on the proportion of eggs which the hens can be in thrives on water treatment, radishes duced to lay at that season, and, see are improved by nitrate of sods, which the University of Rennes ond, because in order to work up a can be dissolved in water, and beets sound business connection with con- are benefited by salt. sition to supply his customers' wants white and yellowish tinted blooms, is

To secure a good winter supply of eggs the following should be observed:

The hens must be of a highly pro ductive strain and bred if possible from several generations of good winter lay-

winter layers must be hatched neither too early nor too late. The hens must be more than two The houses, yards and all appliances

The pullets which are to be kept for

must be laid out and constructed so as The food must contain a sufficiently large proportion of those elements which are necessary for the formation

of eggs, the repair of tissue and the It may be taken as a general rule that it is a good plan to allow the heny to hatch and raise one, two or three broods of chickens during the season when eggs are cheap. Time apparentthe greater number of eggs produced when they are dearest and in greatest

No single breed can be said to be the best for winter laying, for a breed which will do best under certain circumstances may not be suitable is others. If, however, the different breeds are divided broadly into classes the weight of evidence points to the conclusion that for winter laying the small nonsitting breads are excelled by the heavy sitting varieties. The nonsitters will lay a greater number of eggs during the year, but the "general purpose" or sitting breeds are betton. Faverolle and Langshan, and when kept under favorable conditions fowls of any one of these breeds can be depended upon for a regular supply of winter eggs.

GARDEN SNAPSHOTS Dust is poison to soft conifers. Field and Farm says that in Denver trees of but on shaking them they will be as and the popping lasted for a long time bright as ever. This peculiarity adapts also endure much diversity of soil and The Garden Magazine says lettuce
