DAIRY WISDOM FROM MAINE

Definition of Perfect Butter and Hints About Improving Dairy Cows.

An interesting meeting was planned by Socretary Gilbert recently, at the prevent them changing to worms, and Maine state college, Orono. The meeting was held in the new dairy building and combined practical instruction as simply horse hairs. well as theoretical Professor Chees able to a boy. He might ask: "Well, what were they if not horse hairs?" man, of Massachusetts, has charge of the new datry school.

The first speaker was the college farm as yet and perhaps never will. Many operintendent. Mr. G. M. Goveli, who species of them have been classified and gave a lecture on "Good Butter." His given Latin names. It is further said cemarks were mainly confined to quality that these hair-like so called worms are a butter without reference to cows food or grade of mils - Only in the production of a better article of butter than last year is the dairyman sure of hold ing his market. One of the important factors in good butter is flavor; next firmness; if must never be only or salvy foo much working spoils butter by oreaking down the grain. Butter in et, grasshopper or some other suitable right condition when broken apart should break with a distinct fracture nke cast iron. This sort of fracture-loss not show in hird or talloov, nor m werworked batter There is too much water sold in butter. There is too much goes through another development water sold in butter. Ten per cent of Just what no one knows, but eventually water is the lowest practicable amount it gets back to the hair worm stage while 15 per cent, is not excessive. Much utter pat upon the market contains 25 parasitic on many different things. One o 30 per cent of water Mr. Govell gave the following scale

of judgment for perfect butter Flavor -marked, nutty, sweet and pure, 40 nake, working, printing and packing 20. solidity-firmness, not readily soft ening, 12: texture-compact, closeness of grain, breaking with a distinct fracture. 12: color-such as the market calls for 5: moisture-perfection not over 10 per cent., 5: salt-variation not a defect unless quantity used is excessive; mark of perfection, 100. Professor L P. Roberts, of Cornell uni

versity, New York, spoke on "Milk Pro-duction." Professor Roberts thought the cows we now have about the right size. In certain lines in dairying great advance has been made, but in others but little was manifest. It is not likely that new foods for cattle which will be superior to those now in use will be found. as almost everything has been tried and there have been almost innumerable methods tried for feeding. As a general statement, few cows produce over 3,000 pounds of milk per year, or even 250 pounds of solids. There are cows which will produce more than four times this amount, but they are the better stock of the coming standards to which all must aim. The middle ground is the safest Profits lie in diminished cost and in creased production.

Improvements should, first of all, be gin with the cow. The first and great factor is better food and more of it. second, environment-everything in her surroundings, stable, air. light, litter third, selection; fourth, inbreeding Select the best cows in the herd-those which come nearest to the ideal of the owner to breed

The yearly record of the cow should be kept accurately. The quality of the milk should be tested. With the tester and the scales, a farmer makes a big mis declare that there is little use in trying take who keeps a row over three years to be guided by what anyone clse has that brings in a balance on the wrong fed. "Feed hard boiled eggs for the ade. Scales and the tester are going to weed out the pedigrees. Pedigree is "The old idea that hard boiled eggs are

good, but performance is better The perfect cow will be the animat that, having a peligree, can show a better record than her dam, as she in turn shows a better record than her grandam. The other is to obtain the grandam. The good, but performance is better abject is to obtain the greatest amount writers has succeeded with what he rec t energy in milk production. Comfort ommends. Therefore, if you try cracked and food are more than pedigree. The wheat, which the writer thinks most ex-The petigree should be the recorded unprovements made through several flock, lose no time in trying broken rice
