LEXINGTON NOTES.

Another glorious rain and snow storn as visited our locality.

Spring seeding is about all done an a few days each farmer in this section cill concentrate his forces and brea very sere of new land possible.

Farming is no longer an experimen nd one hundred days from this writin the air will be filled with the music undreds of harvesters, as they swee ver hillside and plain gathering the est returns ever realized in an agricu-arsi district. Local dealers have been today a large business lately in farmi-oplements. Leach & Armstrong hav seen busy every day. They are liv-nterprising fellows, and aim to suppl-be wants of the people from a hor-ocking chair to a ten-horse harvester. Large concourse of farmers in tow

ermers' alliance. The meeting of the armers' alliance. The meeting of the propers' party club commenced at ordered party club commenced at ordered party club commenced at order in the chair. J. P. Hadley, a star man, an earnest worker in the alliance, was present and made a stirring speech, preceded by some pointed remarks by F. P. Sine. Resolutions wer then passed endorsing the national and state platforms. The meeting was fully attended and by all odds the most enthusiastic of the season. April 21st w.s. set for the county convention of the peoples' party, to be held at Lexington. The me ting will be called to order at In-

The Melanchely Club held anothe session this afternoon. A fair representation was present and it was a pleasure good hay. tation was present and it was a pleasure to note that the utmost barmony prevailed. During the session one of the members had "a spell" and the surgeon of the order was "called." After a careful diagnosis, he pronounced the case one very unusual at this time of the year. He said the patient was suffering from an acute attack of the contracted expansion of the hyronemous, superinduced by influences which have been duced by influences which have been prevalent, but which are being forced by the excellent sanitary measures of the club, toward the importunity of the in-

The recent talk in our midst of doing something to induce emigration to our country is already bearing good fruit. Many have noted the entire lack of Many have noted the cuttre lack of available single ladies and one of the more enterprising has offered to establish a fund to be used exclusively for securing an influx of marriageable single ladies. One gentleman has already contributed forty bushels of oats to the fund, and as the rule, of "first come, first served," holds good, the ladies who are served." holds good, the ladies who are fond of oatmeal will do well to make the nost of the situation LEXINGTON, Mar. 27, '92

s commonly said of famous beauties. she who uses with artistic taste Wisom's Famous Robertine has fortune in the possessing of a complexion to which nothing but the blush of the rose or the reshuess of the lily can be compared. This preparation is just what it is claimed to be—the most delightful toilet

INCUBATORS.

Are Homemade Affairs Profitable, or Will It Pay to Buy Factory Built Machines? One reads in the various agricultural exchanges of the successes made with bomemade incubators, but not often does the amateur manufacturer of a machine air his failures in print. Following is a recounts his lack of success with an incubator constructed with great care and discovered was highly important. A hot water tank supplied the heat; below this tank was placed the egg drawer, and below this was a drawer containing water pans for the supply of moisture. The machine was made double, with packing between the two cases, so that the heat could not readily escape from the interior. The inner door to the egg chamber was of double glass, while the outer was of solid wood with woolen cloth bearings, where it touched the casing to insure perfect tightness. A tested thermometer was used and great care taken to secure good results.

This incubator was run for nearly three months and the result was one miserable little chick. Next ducks eggs were employed, but the machine yielded only a harvest of rotten eggs, showing that the germs within them had started with life, but had either received too much or too little heat soon after starting Such results do not at all indicate that the machine was at fault; it might simply show that it was not properly operated. So the operator purchased a self regulating machine which persons in whose judgment he had confidence assured him would do good work. At the first trial and at a season when the germs of the eggs are less strong than in the spring and summer he hatched 113 clear profit of five cents if they paid the healthy chicks from 136 fertile eggs. The conclusions arrived at, in his own words, are as follows:

"Subsequent hatches confirmed me in proper appliances in a factory built mabother with the homemade article, es- the state. -Philadelphia Times. pecially when the best can be bought at so low a price."

Spring Lambs A good start is essential to success, and ewesshould be in condition to manufacture a large quantity of milk; they therefore must not be too poor. The only food the lamb can take for a few quently high quality cakes, peas, beans, creased the mother provides more than the lamb can take, consequently she is not properly milked out; the milk thus goes bad in the udder, and unless watchful precautions are taken she suffers from mammitis or garget; oats should e and discre-

pest form for corn to take. A well as well as the skimmilk. known authority cites very finely ground fact, on the ordinary farm the best hay are to be forced. It is almost impossible

Shooting Hogs. The Texas Farm and Ranch calls at-tention to the fact that nine persons in ten, without previous instruction or exrience, will in shooting hogs place the bullet too low, making a very bad and lisagreeable job for both parties. The gun or pistol should be loaded with not more than half the usual charge of powder, and with deliberate aim at short range the bullet should be planted where the lines drawn from either eye to the opposite ear cross, if the head is in a natural position, and a little higher if the snout is held low.

Watch the Colt's Feet. they are leveled so that the coronet on each side of the heels will be at the same distance from the bottom of the hoof See that the toes are not allowed to become too long. It pays to look after these little things. Neglecting to do so may result in ruining a valuable young-ster for life.—American Horse Breeder

Here and There.

Statistics show that there is an increase of sheep in all the northern states. The average production of wheat for 1891, as reported to the department at Washington, was 15 1-3 bushels per acre.

These statistics are furnished by the agricultural department at Washington claimed to be—the most oethorical article and the only perfect beautifier known. Read the testimonials from famous artistes, celebrated chemists and eminent physicians.

as representing the aggregate production of cereals for 1891: Corn. 2,060,154,000 bushels; value. \$518,472,711. Oats, 736,394,000 bushels; value, \$232,-

THE MILK WAR.

The Dispute Between Retailer and Pro-

According to the Farmers and Dairymen's association, there is an emergency staring the people of Philadelphia in the face which bids fair to become as serious communication from a Massachusetts
poulterer to Country Gentleman, who
was expected to be. This is a famine in milk. It seems absurd, but the members of the Dairymen's association say operated with patient watchfulness. His it is a grim, cold fact, and that one of machine, like other homemade ones, was not self regulating—a feature he soon getting up to make the family breakfasts will find that there is not a drop of that common commodity wherewith to mix the succulent oatmeal or the nourishing cocoa, unless some means are taken to control the retail milk dealers. who, the association says, are the whole and sole cause of the present state of af-Through the domineering way of the retailers and the persistent manner in

> past that useful and necessary article of diet has become so scarce that the Farmers and Dairymen's Protective as sociation were forced to take some decisive steps to protect the interests of the wholesalers. Accordingly they met together and agreed that no milk should be sold at wholesale for less than 4½ cents per quart. This is a direct increase of 1½ to 2 cents a quart. Hitherto the retailers have been so powerful as to be enabled to purchase milk at about what price they liked. giving anything from 1½ to 3 cents

which they have cornered milk for years

a quart for it, and compelling the far-mers and dairymen to deliver it to them freight paid. In spite of this fact, though, they have persistently kept the price up to the consumer, and have never parted with a single quart of milk for less than eight cents, making at least a highest price for it.

This state of affairs meant starvation to the wholesaler, the small farmer and "Subsequent hatches confirmed me in the dairymen. They remonstrated. The the belief that unless one is willing to retailers were obdurate. For a time put in a large share of his time watching his homemade incubator, and of the increase in the price of fodder and actual work in caring for it-drawing stock, numbers of small dairymen went off the water, heating water to take its place, and in filling up the tank, and in caused a great scarcity in milk, which it the various other onerous duties that is said will further increase. In this un precedented predicament the wholesalers chine make simple and easy—he would better invest a little more at the start and for all to assert their independence. and get something quite sure, if operated with ordinary intelligence, to give no more milk at less than 4% cents a satisfactory results. The loss in time, quart, at least for a time. At this price eggs, patience and in the value of the they say the "milk industry" can be poultry that would be hatched under made to pay, but if the retailers again better conditions, but which will fail to be hatched again and again in a homemade machine, even when run by an ex- with the result that there will be a dispert, makes it decidedly unprofitable to astrons milk famine in this section of

Not long since I was in Chicago and saw a method in vogue for selling California fruits, which I believe could be successfully applied to the New York butter market. A warehouse is provided by the organization having the weeks is milk, and to provide a good matter in charge. As fast as butter ar-supply of this the ewes must be fed with supply of this the ewes must be fed with rives it is put in the warehouse, and at regular intervals—say every other day. with cows and other animals required to or daily, if necessary—it is sold at ano-yield milk, it is necessary that the mother should receive nitrogenous food, conse-buyer with a list of the packages with the makers' names, and the whole lot is oran and oats are all specially valuable at this time, but it not infrequently hapcent. would make a margin large enough pens that when the flow is unduly in- to pay all expenses and the market would thus be cleaned up every day it would do away with the commission business and put the trade in much better shape.-Cor. Rural New Yorker.

with the milk we add twelve to fifteen Until the lambs can feed on their own gallons of cold, sweet skimmilk, then resecount, the mothers should convert into | volve the churn right quickly eight or milk or partially digest, a pound weight ten times, and we can draw off the reof strong corn per day, besides making maining buttermilk thus diluted with milk from additional food; as the lambs skimmilk very closely. We do this as begin to pick about for themselves the this milk will make the very best kind corn may be gradually drafted from the of buttermilk for next morning if propewes trough to the lambs' trough, but it erly stirred. If you have no sale for the is more necessary to consider what is the | buttermilk, of course fresh water will do

linseed cake and the husk of peas as ex- nearly as possible, put cold water in the cellent for keeping lambs healthy.

Where green fodder has not been provided, the best substitute is found in cold weather even about 65 degs., and very finely sliced roots, which should be always have the butter perfectly firm, given at very frequent intervals, and For 100 pounds butter put in about 75 then only in small quantities, otherwise gallons water; before revolving stir the they become stale and the lambs will not butter (with a wooden fork), then rebe tempted to eat them. The ewe and volve fast, as before. In warm weather, both require hay-good hay-in and when churnings are large, I run off this water and repeat the washing. should be set apart for the lambs which | When only about eighty or ninety pounds of butter are churned one washing is to succeed in fattening lambs without sufficient. Then the butter is taken out by a hair sieve and the sides of the churn rinsed off with cold water.

When every particle of butter is taken out (and it is easily done) the water is drawn off. After that being done, please look into the churn, and it looks almost clean. Now I put in boiling hot water, to which I add some sal sods, and wash, first by hand, and be sure not only to leave the venthole open, but also open a few times the faucet through which the buttermilk runs off, turning it upward, and the steam will thoroughly clean the faucet. Then run the churn for two or three minutes and at once draw off the water. This done, there is never any scraping to be done. Only about twice a week we scrub the churn with a brush, Keep sharp watch of the feet of the and it keeps perfectly fresh and clean in coits. Have them rasped or pared as this manner. Always finish with not often as once a month and be sure that water, not with cold, which is the way to do with all creamery utensils and milk cans.-Cor. Creamery Journal.

Bunning the Machine.

I see nothing dangerous in running a 15-inch Danish-Weston at 4.500, so long as every successful operator of the same whom I have heard make a statement in the matter testifies to 4.500 being about the right speed.

So far as my experience goes I am not afraid of a Danish-Weston at 4,500, a De Laval at 7,500 to 8,000, a Sharples Belt the same, a Russian at 8,000, and do not think they are speeded in excess of what some machines are run by first class operators, while as to the amount of milk put through I do not find any one who tries to feed his machine up to manufacturers' claims. -Cor. Creamery

Frank H. Snow, Commissioner U. S. Circuit Court at Lexington, Or., is authorized to receive fees for publication of final proofs.

Cleansing the Chura.

When the butter comes out too freely with the milk we add twelve to fifteen gallons of cold, sweet skimmilk, then revolve the churn right quickly eight or ten times, and we can draw off the remaining buttermilk thus diluted with skimmilk very closely. We do this as this milk will make the very best kind of buttermilk for next morning if properly stirred. If you have no sale for the buttermilk, of course fresh water will do as well as the skimmilk.
