SKILLFUL HARNESSING AND PLOWING

How to Bring the Line of Draft Where It Will Exert Greatest Power. How many men are there who know

How many men are there who know to harness a horse or a pair of horses when the plowing of a field is the work to be done? If the putting on of the harness and the buckling of the proper straps is all that is required, all proper straps is all that is required at the proper straps in the qualities.

Askide from excessive heat, the great interaction feeding qualities.

After making my selection, all cattle above the age of calves 1 let have a time of the proper straps in the qualities.

National Bank of Heppner. plow. With one made upon the principle of the true cone or spiral the draft should be direct from the point of bearing against the animal's shoulder to the point where the plow offers the greatest amount at a time.

especially in a second preparation.

I have a great aversion to all kinds of soups. I never dampen the feed but always give it dry; thus it makes a small paunch, which gives the animal a much grander top and side line. The when chicks are two weeks old cracked.

> which he is able to exert his strength. the meeting. The sure test of the proper harnessing of the team is to see whether the plow will run level at the depth required, without the plowman having to exert any strength upon it. If it will not the driver has an opportunity to show his skill by changing the harness, or the clevis at the end of the plowbeam, so as to bring the line of draft where it will exert the greatest power with the least expenditure of strength. The plowman planting and level culture afterward a should be expected only to guide the

plow, not to push it or pull it. The Growth of Standard Vegetables. Wyandottes, Plymouth Rocks, Light Bramabs, Rose and Single Comb Brown Leghorns, Partridge Cochins, Hondams and Silthe earliest were Livingstone's Perfection, Early King Humbert, Livingstone's Early King Humbert, Livingstone's Favorite and Large Round Yellow. Still there is only four days' difference, the Early King Humbert being the earliest. This variety is valuable only for this quality, however. The Large Round Yellow is productive, and has large fruit, but is not a strong grower. Livingstone's Perfection was one of the best. The fruit 1.000 YOUNG FOWLS My Fowls have no Superior. fection was one of the best. The fruit

Of a large number of cauliflowers, the
American Erfurt and Early White Box 55. com.396. Forest Grove, Or French were characterized as very good; also Carter's Extra Early Autumn Giant, While all of these varieties may not do as well in all other sections they have good reputations elsewhere.

A Caution Begarding Blue Grass. of, the species Poa pratensis, commonly known as Kentucky blue crass, is meant. It is important, therefore, to note that a grass, being distinguished as Canadian blue grass. This species is next to worthless for lawns and has little or no value as folder, being so hard that animals do not relish it, hence its other common name, wire grass. Where known it is usually looked upon as a pest hard to eradicate when once established. When ordering blue grass seed for the lawn insist on getting Pon pra-

tensis, advises The American Gardening. Items in Cabbage Culture. It has been reported, as a result of an experiment in one of the United States stations, that if cabbages are slightly tilted over with the plow in the fall it A person usually desires to gain some inproduces a tendency to make them have larger heads. "If the cabbages are formation as to the most desirable routto take, and will purchase tickets via the one that will afford him the quickest and planted shallow," says Dr. H. L. Bailey, of Cornell, "and earthed up, the per-centage of large and heavy heads is best service. Before starting on a trip to Chicago or any point East, you should

A Covered Speed Track. When the big covered track at the Jewett farm was first built there were many prophecies made that horses worked continually over such a track throughout the winter would not do as built expressly for this service, and are exquisite in furnishings and convenient and comfortable in arrangement and so mile track is now under cover.

Test Caterpillars.

Professor Comstock says: "There are all the most elegant ever inaugurated, many species of caterpillars that feed and is operated in the interest of its particle upon the foliage of the apple, pear and quince. The more conspicuous of these Fast trains via the Wisconsin Central are the tent caterpillars, which are so ines leave Minneapolis daily at 12:45 p. large silken tents. These may be readm. and 6 25 p. m., and St. Paul at 1:30 large saken tents. The sum it its destroyed by removing the tents with p. m. and 7:30 p. m., making favorable the tent caterpillars. As this tent serves connection with all trains from the West merely as a residence, the caterpillars The state of the s

CATTLE FOR THE SHOW RING.

emarks Made by James Rankin, the An Experienced Exhibitor Explains His Method of Preparatio

At a farmers' meeting in Boston, Mr.
Rankin, of South Easton, recognized authority on all matters pertaining to poutry, read an essay in which he made these remarks on the rearing of artificially hatched chicks, many of which are select cattle of the low down, blocky, causily applicable to all chicks. equally applicable to all chicks. He sarly maturing type, with a mellow skin and plenty of hair, descended from an-

most every farmer or farmer's son can do it. If it includes the attachment of the team to the load in such a manner of four times what is needed, allow it to great the horses shall be able to pull as oxen pull in a properly made yoke, from the point where the least amount of the chicks.

Before placing chicks in the brooder be the point where the least amount of the chicks.

Before placing chicks in the brooder be the point where the least amount of the chicks.

Before placing chicks in the brooder be the point where the least amount of the chicks.

Before placing chicks in the brooder be the point where the least amount of the chicks. strength exerted will contribute most to 3 feet long and 8 to 10 inches wide will bran, one-third commeal, a little cut the moving of the load, there are not as many and perhaps but few adepts.

There is one rule that is invariable, according to Field and Farm. A direct some thin material. This effectually

cording to Field and Farm. A direct line from the point where the load offers the greatest resistance should be the line of draft. In plowing the driver should first examine the shape of the plow and see where the resistance of the earth to be turned will put the heaviest pull upon the team.

This, says the authority quoted, requires usually a good plowman, but there are those well skilled in handling about it. They know but he movement of the plow in the soil how to exert their own strength, but they know but little how the strength of the team is being taxed. A mathematician who never held a plow might help them in that respect. But there are those who watch the team as well as the plow and know and heave the condensation of the plow might help them in that respect. But there are those who watch the team as well as the plow and know and know and know and know and know and know and the chicks from scratching the prevents the chicks from scratching the food off the board into the dirt and filth, and also from mixing the dirt into the food.

This board should be kept free from sour food and filth. Grannilated atment should be kept on it constantly for the new cont of hair bleached by the hot sun, so detrimental at that time of year. At night 1 let them have the run of a special pasture, adjacent to the barn, kept for that purpose, increasing their feed to fourteen quarts yearlings, eighten of the plow in the soil how to exert their own strength, but they know but little how the strength of the team is being the content and morning and stabling at food off the board into the direct into the dight and morning and might, with access to a little hay.

At the end of the three weeks I stable them during the day, for fear of getting the new cont of hair bleached by the hot sun, so detrimental at that time of year. At night, with access to a little hay.

At the end of the three wells I stable them during the day, on the light and morning and stabling at fight. At the wide alight and morning and thick. At the end of the spect. But there are those who watch the team as well as the plow, and know when it is exerting more strength than it should to raise and turn over a sod of the solution of t

point where the plow offers the greatest resistance to the earth. If the plow is built upon a sharper angle or intended to turn a more shallow furrow, the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point of the point to turn a more shallow furrow, the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to the point to turn a more shallow furrow to turn a more shallow fu of draft will be lower and the length of the chain attached to the plow beam must be changed accordingly.

The line of draft from the yoke or the collar of the horses to the end of the the chain stanched to the plow beam wish. When chicks are grown together in large numbers and they have little or no opportunity to forage for themselves collar of the horses to the end of the target and warts.
