taken off. Thus hens and cutoks get the full benefit of the warm fumes that arise from it.

When strong enough the broods are removed to an orchard on the north side of the house. Here are scores of coops, and after a few days the hens are allowed to range at will with their chicks among the trees and currant bushes. The hens do not fight each other or mo-The hens do not light each other of a light each other of the Better. lest strange chicks. This is because all for the Better. In the sixtics cheese was double in price what it brings now, and makers by light about the business of built here under which the broods gath-enty-five dollars per month. Many of er during storms, and eventually many of the growing chicks make these their factory today except as second hands.

On this farm large profits have been realized in spite of comparatively low prices, as eggs in any amount are not expected before the middle of February. The prices received range from fourteen to twenty-two cents per dozen, a few early eggs being sold at much higher figures. But at any time of year these customers, who promptly return drafts for them. During freezing weather

bulk of the eggs goes as freight. day are gathered. Exact figures as to cost of feed and labor, and the receipts of money cou d not be obtained, but the yearly product was estimated at 10,000 dozen, worth at least \$1,000, half of which was set down as clear profit.-Arthur D, Warner in Rural New Yorker.

You Pays Your Money and You Takes

Your Choice. The advocates of the respective merits of the Percheron and Clydesdale horses have never yet been able to convince the public that either one or the other of these fine breeds was the best among

We place before our readers this week two pictures, one of an imported Percheron stallion, the other an imported Clydesdale, both probably as fine specimens of their class as have ever been

OLD AND NEW DAIRYING.

chance a dark colored chick, the others lose no time in pecking it to death. A number of long, low shelters have been manufacturing readily commanded sev-

and at only common labor wages at that. The cheese that they turned out, al-

though it contained some good stock, was the reverse of uniform in quality, and would now be scowled at by dealers, and would bring cut prices.

Yet dairymen rightly claim that they received more for their milk then than now. True, they did per pound, but eggs sell for two to three cours all of the market price. The eggs are all of one color, are carefully washed and one color, are carefully washed and one color, and macked in clean crates, yielded by their duiries? Also, does not yielded by their duiries? Also, does not a dollar go farther now in purchasing necessaries than it did then? With for them. During freezing weather these bringing sixteen cents per pound shipments are made by express, but the in 1870 dairymen were really but little

more benefited than they were last sum-By careful selection a strain of the horns has been established which are larger and lay larger eggs than the the farmer had to buy as well as what he had to sell. These prices were not he had to sell. These prices were not larger and lay larger eggs that types ordinary kinds, and are excellent types of the busicess hen, though perhaps of the busicess hen, though perhaps you the value of the necessaries to you the value of the necessaries to you the value of the necessaries to opened about thirty dozen of eggs per dairymen, who have for the last few years paid some attention to breeding good milch stock, and have fed on the same plan, are now making more clear money per cow than they did a quarter of a century ago, when dairy products were so high.

The purchasing power of money is so much greater than it was then, the knowledge of breeding so much more clearly defined, and the adoption as a
