is \$5.84, all I have at present. By the way, what branch of science did the way, what branch of science did the

The statistician of the United States has prepared a report on the wages of farm labor, the result of nine investigations from 1866 to 1892, with prior rec-ords of the wages as far back as 1846. The report shows monthly rates both with and without board for the season or year and also by the day in harvest time. It shows that for ten years wages have been very uniform and well sus-tained in spite of fluctuations in prices of farm products, and that a steady demand exists, with a positive scarcity of farm labor in a large portion of the coun-

Bermuda Grass for Lawns. Bermuda grass is the best of all grass for a lawn in dry summer climates. It will remain beautifully green under great heat and drouth, though it browns in winter from severe frosts. It quickly regains its fine dark green with a little warmth. It must be grown from short bits of roots, thinly but firmly covered it spreads quickly and covers the ground efore it need not be planted very kly. When planted if the soil suits thickly. it and in this it is not particular, if the climate is right, it is very sure to stay and keep spreading. So do not plant it where you do not want it, and keep a sharp look out or it will get there some way. It is also the very best pasture grass we have. Our dairy lands would be worth ten times as much if half of their area was planted in Bormuda grass for summer and the other half in Texas blue grass and other good winter forage plants such as alfillirea.

Experience with Ensilage A. P. Martin of Sonoma county, Cal. gives in The Pacific Rural Press a most The American Cultivator Thinks interesting experience of five years' use of a silo 10x29x21 feet in size. He rec. The advent of horse power and steam ommends the plan highly. He has tested corn of different kinds, oats and rye, both for summer and winter feedwhere been signalized by increasing earliness in getting grain out of the straw. Why farmers who are in no hurry to sell should want to thrash directly after In his climate-cool and foggyhe finds the strong growing," early dent corn good, but Stowell's Evergreen sweet corn by far the best. Oats good; harvest has always been a puzzle to us. We suspect it is not the farmers who rye poor unless cut before blooming. As has been stated in this paper, he found are hurried. It is the army of traveling thrashing machine owners, each in search of a job. When they get one it the many different weeds in very weedy oats were all eaten up clean by the cows. is a signal for all the farmers in the neighborhood to follow. As the owner which proves that nearly any succulent of the machine seductively puts the of the machine soductively puts the plant at the right age of maturity will case, "he may not be around again until make good silage. Why not use pulped very late. It is better to thrash while vineyard prunings? Mr. Martin's experience proves that all dairies should have days are long, so that jobs can perhaps

So, by these and like arguments, the siles. Take Time by the Forelock. dirtiest and most disagreeable work of Be prepared to spray at the right season to head off the codling moth, the curl of the leaf on the peach, shot hole fungus of the apricot and scab on the fruit and rusts and scabs on the foliage the whole year and the one that always requires the severest labor is crowded into the hottest weather. Not only this, but the grain is often injured because got out of its chaff before drying out. We believe in some cases where grain is cut green that it may take sap from of the pear, apple and quince. Remem-ber that the right spray is simply a preber that the right spray is simply ventive of these things and not a cure ventive of these things and not a cure.
