fested ground.-Prairie Farmer. For General Purpose Fowls (winter

PROFITS OF CORN GROWING.

The Experience of Different Cultivators Gives Widely Different Results. Some cultivators find that growing corn scarcely pays expenses, while others regard it as one of the most profitable farm crops. Those who are the most successful and who make the most money are consistent of the constant by it are not satisfied with less than sixty shelled bushels to the acre, while more It used to be the practice to plow the frequently seems, live is the standard ground as soon as possible after harvest, quantity. Thirty busicles to the acre skimming the ground, that is, plowing would give rather scant returns for much as shallow as possible, so the stubble and profit. As manure is an essential for weeds were turned under. Later on, or success, the wide variation in the price just before seeding, a second plowing and quality would make a material dif-would be given deeper and more thorough than the first, and then sufficient drained, mellow soil would be more harrowing or dragging would be given cheaply worked than a hard and story to fine the soil, it being considered an one, and the best labor saving imple item to have the soil fine and mellow and ments would reduce the hard work done leep as possible. Gradually a change by hand. A vast difference would occur was made, and only one plowing was between timely horse heeing and neg given early, but deeper, and then the lecting cultivation a few days, or long surface, to the depth of three or four enough to give a dense growth of weeds inches, put in as fine tilth as possible. leaving the under soil firm, it being con-sidered better to do this than to have the contrast would occur between such negsoil loose and mellow as deep as plowed. lected treatment and the timely use of A Missouri farmer, in The Farm, Field the smoothing harrow, which by passing and Stockman, says:

In my vicinity the practice usually followed is to plow but once, and that continually clean and mellow, and in son for this is that many farmers consider it an injury to the soil to plow and let lie exposed to the hot sun of summer.

Gentleman, authority for the foregoing:

60 bushels of shelled corn, \$30; fodder, \$5.

Profit Nearly the same expenses would be The condition and character of the required for only thirty bushels, unless soil will make a difference. In a dry in entirely omitting the manure, in season the soil must be worked to a suffi- which case the cost would be only seven cient depth to secure sufficient moisture | teen dollars; and the crop, worth fifteen to induce a good germination of the seed, while with the same soil in a favorable two dollars. Hence it will be seen that season a shallower working of the soil good or heavy crops are the only profit-would give better results. The deeper able ones. But every farmer will make

Buckwheat is a crop that more atten tion might profitably be given to. In vated to considerable extent a field of it low under all conditions is impossible, has now become quite a rarity, but there for with a large proportion of farm work the season and the soil must be considered, and what will be best at one time will fail at others; hence the farmer must rely to a considerable extent upon his a good crop for green manuring, and can interpret as to the least research as to the least research. WE HAVE FOR SALE ALL KINDS OF UNdressed Lamber, 16 miles of Reppuer, significant as to the best preparations to be given under the conditions he is working, rather than following some one also to procupe a condition of the puer in the ing, rather than following some one else working under entirely different circumstances.

to procure a catch of clover. One or two crops turned under would make a good foundation for a stronger crop, such as rye or clover. As it may be sown late it may often be used as a second crop, or The Plow in the West.

It looks as if the plow would have to fall to the rear as a farm implement, says the Peoria Transcript. From all parts of the west comes the advice.

Don't plow your ground for oats. Plow-bushes, with sales, bush on horses, and when slow, hard on horses, and when buckwheat makes one of the very best

> An Eastern Dairyman's Way, verizer or corn cultivator. This means of putting in cats is much more rapid, and the crops as a rule are better than the crops as a rule are better than butter in one year, an average of 3.39 those from the slower way of plowing pounds. This is not a breeding herd of the land and then covering with a nar-row. During the past four seasons, says the authority quoted, our farmers have been experimenting with the pulverizer as a tool to prepare the seabed for a corn crop. They first clear the land of stalks, then put four horses on the pul-verizer, turn the disks to an angle where they will die and throw, and dig up the pure bloods, but is kept exclusively for they will dig and throw, and dig up the Hubbard squashes, besides bay; feeds surface of twelve or fourteen acres a no grain in summer and is not a heavy day. By going over this twice or three feeder of grain in winter; uses sawdust ized to the depth of three or four inches, stables, so he loses no element of the and in the best possible condition to put manure voided by his stock, and in the or the planter. Those who have tried absence of sawdust uses straw that has this are enthusiastic in praise of this been chaffed by the cutter—"the love Siftings. this are enthusiastic in praise of this been chaffed by the cutter-"the boys
