Chicago,

Do you of the russet shoes know how o clean the leather and restore it to its first estate? Of course you have tried the varnish and washes and found them altogether vexation of spirit. And the real thing is so easy when you know about it. Just squeeze the juice of a lemon on a bit of soft cloth, give the leather a thorough treatment with this, and see if your shoes don't look as well as they did when you bought them. KANSAS CITY, ST. PAUL,

Cut tohing for the While Minnes. At the class works in White Mills. Wayne county, Pa., there is on exhib-tion what is regarded as the finest se of cut ginss over turned out in this country. It consists of five hundred country. It consists of five humane-and twenty apparate pieces, and has been ordered by the United States gov-been ordered by the United States govmount for the white house. On each dece of the set, from the mammoth conterpiece and punchased in the tiny salt cellura, is cograved the coat of arms of the United States. This work along has occupied months of time the total cost will be in the neighbor interplace and punchbowl to the tiny good of three thousand dollars.

GTU HALF-YEARLY COMPETITION.

The Most Interesting Contest Ever Offered by The Canadian Agriculturist.

by The Canadian Agriculturist. One thousand collars in eash, a part of hand-one whethed poinces carriage and harives, and over one thousand other valuable prices or the Agriculturist control of readers! Who will have them? THE MUSKRAT'S INTUITION. As a Weather Prophet He Can Give Points to General Greeley.

Judson Rockwell, of Wapping, has great confidence in the meteorological wisdom of the festive muskrat, and certainly has some reason for his faith, says a Connecticut correspondent of the New York Sun. He believes that a inuskrat can foresee cold weather and floods three or four days in advance with far more accuracy than General Greeley can with all his expensive weather bu-

reau. The muskrat is an odd animal, who builds his house in the shallow water of a pond or morass late in the fall, and his rsonal comfort hinges on his ability to foretell what the weather is going to be at long range. He must know when he puts up his comical mud hut just heavy the February and spring freshets will be, so that the top chamber of the house will be out of the wet when the freshets swirl about it. On sunny days in winter when the waters of the ponds are free of ice, the muskrat claws upon the subaqueous door of his dwell ing and goes drifting about the sparkling lake, his sleek black nose and face just parting the waves and leaving a long triangular wake spreading afar as he sails. On such days he lays in a supply of trout and other fish, which he catches expertly, lucking behind a stump or A SERVICEABLE FRUIT DRIER. rock. But he must know two or three in strongly impressing upon fruit grow-

ly close up its submerged gate, banking for so doing: Judson Rockwell has watched musk-

traits enables him to predict the advent of a cold wave with a correctness that Connecticut was basking in April-like sunshine and people in all parts of the State were killing steiped snakes and picking dandelion greens, Judson visited his muskrat traps and found three fine minks in them. But it was by no means

to Wapping and hastened to the village store with his budget of news. He had made a discoverity and as soon covered breath enough he recounted it. you're worth we shall have a cold wave in less than four days. Now remember that." Just three days later came the upon which the pan is set, coldest weather of the winter, which thing a bridge of ice four or five inches thick across every lake. The muskrat sign is new and the cred-it of it belongs to Judson Rockwell, of

The Harvesting and Care of Vegetables carbuncles, for Winter Consumption. As sweet pointoes are readily injured by frost this crop is among the first to be dug. Great care is necessary in life ing sweet potatoes in order to avoid bruising them. Cut off the vines close blood diseases, take above the ground; lift out the roots by means of the spading fork. Leave of the ground for a few hours to dry, and then store in a dry, warm loft or other dry place where the roots will not be en It will posed to great changes of temperature To keep well these tubers should not b relieve and cure

or 55 degs. Beets and carrots are lifted early. A supply of the former for table use ma be stored in boxes or barrels or heaps in the cellar, and should be covered with sand to prevent evaporation and wilt ing. When the root crops are large ey are readily carried over in pits ou of doors. Turnips will stand consider able frost, but a good freeze seriously injures them. Cabbage will stand freeze, while salsify and parsnips can b left out all winter if desired, although usually it is best to dig and store a supply to use during the winter before nard freezing weather sets in. Vegetables to

STORING VEGETABLES.

be stored for long keeping must be sound. Store in a place where there is a good circulation of air and yet in a place where they can be readily protect-ed in case a sudden change of weather should make it necessary. In this way a good opportunity will be given them to dry out before storing away, and they will keep much better than if they are dug and stored away immediately.

On the subject of harvesting Irish potatoes American Cultivator says: "The potatoes should be dug as soon as the weather is such that they can dry off fit to take to market or to be put in the cellar. They should be well dried but not sunburned before being carried in, and should be kept in a dry but cool place, with good ventilation, and away from the direct influence of the sun light or moonlight. Select some of those that ripen earliest for seed, and do not take any misshapen or scabby potatoes for seed. Good shape, smooth skin and early ripening are more important in

seed stock of almost any vegetable than

Fruit Drying. When there is a surplus of fruit which the grower cannot sell in a green state or work up into jam or preserves, the value of the drying process is most apparent. The New England Homestead,

days in alvance of the approach of a ers the necessity of preserving some of cold wave that will fetter the pond, so this surplus by the process of drying, that he can retire into his hut and solid-illustrates the following simple device It consists of a water tight tin vessel.

Judson Rockwell has watched musk-rate for many years, being a veteran trapper, and his knowledge of their deep. The usual method of using is to place one end of the pan on the stove. the outer end being supported by the astonishes all his neighbors, who pin light bench, as shown in the engraving their faith to the predictions of old At or near one corner of the top is sol probabilities. Early one March while dered a small funnel, through which water is poured into the pan, which is partly filled. A cork is then placed in the finnel, leaving a small hole for the escape of steam should too much be

The fruit is spread evenly over the three hours' time even with a moderate

GOT HIS OWN SPOONS.

A Wealthy Bachelor's Experience in Buying Wedding Presents.

The amount of shapping for wedding gifts that is going on is something tre mendous, and the man who at the club the other day remarked that he had con cluded to be married, so that he could shift to the shoulders of his wife the responsibility of making dinner cally and of buying wodding gifts, was ans wered by a groan of sympathy from al the bachelors present, says the Bostor correspondent of the Chicago Tribune And the mention of wedding gifts re calls one of the bits of light but some what amusing gossip floating here "The tale tells," as William Morry save in beginning his volume, "that ir times" not "long past" there was a wealthy and artistic bachelor in Boston who sent to an acquaintance as a wed ding gift a set of berry spoons of a fash ion peculiar and unique. They please him much, but they did not please the bride at all, and she, therefore, quietis took them back to the house where they were bought and exchanged them In the course of the winter the gentle man went to the same jeweler to pro-oure a welding gift for another friend saw and recognized the spoons, bough them and presented them, still un marked, to the second bride. She like how no hottow than did her friend, and tige hor friend, and took them back to he silversmith. But in the fallness o lime the original donor of the spoon took unto himself a wife, and then onf his friends who had not heard of the st controhase went to the leweler and stald to him. "You know what Mr. J. would like

'ell me what to give him as a wedding

"I think." answered the jewoler, with a smile. "that he must like these spoons pretty well, for he has bought then

"Then he shall have them," was the reply: "but I really think it will be well to have them marked this time, so that they shall not come back again."

And so it came about that the unleus and most artistically ugly spoons came into the possession of Mr. J., who de clares that they are the handsomest herry spoons that he ever saw.

nurses for turkeys and chicks. Apples for Stock Food. Apples are not a strong food for live stock, and the lack of "strength" may be shown by a short table of comparison. The leading compounds for which a fodder is valued are the albuminoids and carbohydrates. The former contains the substance for the making of

the vital junces, muscle, etc., while the latter are to do the work of the animal machines, the fuel for the engine, so to speak. Of these groups of food elements the following familiar food stuffs con-

tain the averages as given after each: Albumi- Carbohy-

drates. 84.22 60.54

The pointage is much better because there has been a condensation of the albumi-

noids. But as the albuminoids are mostly in the skin and seeds and these are the least digestible, the actual feeding value is not what the table would otherwise

represent. Apples are a poor food unless "wormy" and the wish is to destroy these insects by feeding them.--American Agriculturist.

The relative value of the allominious E w M and carbohydrates, but when it is un-derstood that the former are much more important, therefore expensive, it fol-lows that fresh apples are a weak food. The refunce is much better because there are uncompared by the because there are much more solution of solution of the solution of the solution of the solution of with Harvewood, Wes McNaha, Samuel War-lows that fresh apples are a weak food. The refunce is much better because there
