HOW TO WALK WELL. Take to Shoes with Low, Square Heel and Ample Toe Room. A writer in the Pseudological Journal gives the following advice, in an article entitled "How to Walk Well." "A great deal depends," he says, "on shoe leather, if we would get comfort and avoid injury. We are in a lively climate, which does not encourage us to wear the beautiful, sensible sandals of the Greeks and Hebrews. It was the advice of an unfortunated young soldier to our marching volunteers of the civil war, 'Trust in God, but keep your shoes oiled.' We must not have errors in our premises; a corn is a fatal error to a walker. Therefore take to square, low heels, wide soles, and ample toe room. Wear loose, short, warm clothes, if the weather be cold, but heavy ones never. "Light flannel is capital, all the year around. Caps are better than hats, by land as by sea, for the wind can't catch at them. One's stockings are apt to bunch and feel uncomfortable on a long tramp. But if, before starting, you soak your feet for and aft, so that they are eased in leather, they will keep cool and easy under you from morning till night. 'Break an egg in your boots,' said James T. Smith, who was a boy all his life. But whichever you do, you will find it a great help and convenience, though the prescription may seem queer to a novice." Power of the Mosquito. A scientist computes that with the aid of a machine constructed on the principle of the boring, drilling and pumping apparatus of the mosquito, a hole could be bored to the center of the earth in less than a day.
