A JAPANESE GARDEN.

The Sensations There Experienced-Familiarity of its Animal Inhabitants. Lafcadio Hearn, in an article in the Atlantic devoted to a Japanese garden, writes thus of his own garden and some

of its inhabitants:

"Those antique garden wails, highmossed below their ruined coping of tiles, seem to shut out even the murmur of the city's life. There no sounds but the voices of birds, the shrilling of semi, or, at long, lazy intervals, the solitary plash of a diving frog. Nay, those walls seelude me from much more than city streets. Outside them hums the changed Japan of telegraphs, and newspapers, and steamships: within dwell the all-reposing peace of nature and the dreams of the sixteenth There is a charm of quaintness in the very sir; a faint sense of something viewless and sweet all about one; perhaps the gentle haunting of dead ladies who looked like the ladies of the old picture-books and who lived here when all this was Even in the summer lighttouching the groy, strange shapes of stone thrilling through the foliage of erness of a phantom caress. These are

no genius may reproduce.
Of the human tenants here no creature seems to be afraid. The little frogs resting upon the lotus leaves scarcely shrink from my touch; the liz-ards sun themselves within easy reach of my hand; the water snakes glide across my shadow without fear; bands of semi establish their deafening orlently poses on my knee. Swallows and sparrows not only build their nests on my roof, but even enter new contractions and sparrows not only build their nests on my roof, but even enter new contractions and the sparrows not only build their nests of the pulse and mental confusion of the pulse and mental confusio concern-one swallow has actually built its nest in the ceiling of the bathroom-and the weasel purloinfish under my very eyes without any scruples of conscience. A wild uguisu perches on a cedar by the window, and in a burst of savage sweetness chal-lenges my caged pet to a contest in song; and always through the golden air, from the green twilight of the mountain pines, there purls to me the plaintive, caressing, delicious call of the yamabato. No European dove has such a cry. He who can hear for the first the voice of the yamabate without feeling a new sensation at his heart litdeserves to dwell in this happy

WORLD'S FAIR NOTES. Missouri Getting Ready for a Big Show

ing Space for Foreign Nations. The work of the Missouri world's fair commission is progressing rapidly and already a large warehouse in St. Louis is filling with exhibits of the products of the soil of the state. With with the season. Specimens of grains, grasses, forage plants, etc., in straw and threshed, have been seemed, inevery other agricultural product as de-

Specimens of every kind of Missouri fruit and berry are being prepared as they ripen and placed in crystal glass This exhibit will be added to from next year's crop, this year's supply being kept in cold storage. Already forty specimens of timber have been collected, and nearly two hundred more will be added. The mineral exhibit will include exhaustive specimens of zinc, lead, coal, iron, stone, clays and

The following schedule of allotments of space in square feet to foreign nations in the agricultural building includes grants of increase made since the first schedule of allotment determined upon some time ago. As finally fixed se allotments are as follows: Brazil, 7,200; Argentine Republic, 2,278; Chili, 731; Honduras, 990; Nicarugua, 1,180; Colombia, 1,810%; Peru, 1,342%; Sulvador, 1,342%; Holivia, 1,342%; San Domingo, 912; Porto Rico, 912; Cuba, 1,444; Ecuador, 1,710; Guatemala, 978; Hayti, 978; Ceylon, 1,684; Mexico, 6,020; Germany, 11,875; Great Britain, 18,846; France, 6,825)/; Denmark, 1,584; Swe-

den, 1,760; Jupan, 3,088, The rich and powerful princes of India, writes Consul-General Ballantime, are preparing to send to the world's fair a large collection of exhibits, including artistic articles of gold and silver, ivory carvings, paintings, inequer and damnsk work, embroidery, la r filigree work, etc. Several of the princes have decided to visit the fair with their retinnes.

Small change. Graphie, is evidently much appear hazar in southwestern France. A farmer in the Dauphiny Alps rewrity sold some suche the for one has been find fif-teen france, and stipulated that an should be paid in centimes. The buve assented, treating the demand as a When, later, he offered to pay the money in ordinary cash, however, the farmer held to his bargain, and summoned the other before a magistrate, who decided that the exact terms of the agreement must be observed. purchaser, therefore, had to count out eleven thousand five hundred single centime pieces for his debt of one hundred and fifteen francs.

TYPHUS FEVER.

Not Invariably Fatal But Always Very Dangerous. The word typhus-literally smoke refers to the heavy stupor that characterizes this fever. Formerly the name was used to include also what is now known as typhoid, which was then remaind that impressions have to be reknown as typhoid, which was then re-garded as only a milder form of typhus. ceived and reported it would not require this arrangement and evidently decided The two diseases are wholly distinct, much reasoning to be convinced that the notwithstanding some resemblance in lines of delicate tissue which attend to a nest. So she carefully hopped into it certain of the symptoms, says the Youth's Companion.

Typhus fever prevailed extensively during the sixteenth century in Italy, France and England, In England sheriffs, judges and jurymen took the hands and feet, of the nose and mouth, infection from prisoners brought before them and on account of the prevalence of the disease in jails it came to be known as jail fever. Other names have been camp fever, spotted fever, putrid fever and ship fever. In England and Ireland it has repeatedly prevailed with have nothing to do with sensation, congreat severity within the last two hun-

dred years,
There have been occasional outbreaks of it in the leading seaports of the United States, Between January 1, 1861, and November 1, 1861, one thouthe long-loved trees-there is the ten- sand four hundred and twenty-eight cates were admitted to Bellevue hosthe gardens of the past. The future pital, New York—more than five hunwill know them only as dreams, creative dred of them during the last six months dred of theta during the last six months

tions of a forgotten art, whose charm of that period no genius may reproduce.

Of that period.

Typical from when not fatal, lasts Those who have used Dr. King's New of the peculiar turns of speech there about three scales. For the first week the symptoms are not severe, and the patient may even keep about his work. Towns the ead of that time the characteristic rash appears, the other symptoms are more pronounced and the patients of the patients of the peculiar turns of speech there are not severe, and the patients was advertised druggers, and get a trial bettle, free. Send your name and address to H. E. Bucklen & Co., Chicago, and get a sample box of the peculiar turns of speech there prevalent. He was once present at an eclesiastical meeting where motions were piled upon each other until materials, and get a trial bettle, free. Send our name and address to H. E. NATURE'S WONDERS. The Strange Intelligence of Brainless

It is not often that we find animals their domestic duties. To meet with instances of helpfulness in creatures so low in the scale as are the "sea-urchon our coast is really remarkable. Prof. Eider, of Colby university com-municates to London Nature what he observed among the echini of Casco

Among the specimens brought back from one excursion were four of the common echini. The last one taken had been left exposed to the sun some time before it was noticed and properly eared for.

These four animals were placed alone in a small aquarium, and, as we wished to study their action, each was turned month up. Soon the action began with which every naturalist is familiar, and three of the captives slowly rose or edge, and then deliberately lowered themselves into the normal position.

The fourth, the injured one, made much less rapid progress; all it could achieve was a slight tipping on its disk The two nearest echini, from six to eight inches distant, now moved up and stationed themselves on opposite sides of their disabled comrade

Fastening their tentacles for a pull, they steadily raised the helpless urchin in the direction in which it had started. As soon as it was possible, one of the helpers moved underneath the edge of the disk on the aborn | back | side, and when the half-turn was accomplished. the other took station on the oral side, gradually moving back as the object of so much solicitude was gently lowered to the position nature had made most convenient.

The First Shot.

About the year 1783 a Bristol plumber named Watts dreamed that he was out in a shower of molten lead. He ob served that the metal came down in spherical drops, and afterward, to fine whether it would be so, he went to the top of a church and poured melted metainto a vessel of water below. To his great delight he found that the lead had gathered into beautifully formed glob The Complet System Which Connects the

Brain with All Extremities. There are very few persons who have even a slight conception of nerves as they exist and of the part which they have to play in the affairs of life. The nerves are the 'wheel of fortune," and any little interference with their cog-The nervous system begins with the brain and ends at every extremity. Little ends of systems of complex compositions are the telegraphic and the transfor agents of every impression transmitted to the central station. Nerves are simply the exponents of impressions, and are not responsible for what they transmit. Nerves start from the spinal cord, and incidentally the brain, and, according to the Bultimore Herald, are simply agents of more important matters than the various senses which they subserve. The nerves are subject to external influences which are not regulated on a monetary scale. They are masters in every sense of the word. They may maintain their energy for years, or they may serve their time of duty and degenerate. While they hold their sway they regulate life; when they get tired they are useless. The life of the nerve is a matter of idiosyncrasy. One may preserve an ideal for many years and another for as many months. It is the temperament and the individ-ual which act as a balance wheel. Nerves are subjected to every influence of wind and weather, to sensations of this work require a little rest, as well as do the other parts of the body, and they are human as well as energetic in the performance of duty. The nerves of the eye, of the ear, of the are sensitive bodies, and convey simply recorded by the brain. These impressions are photographed and deposited in recollection and form the basis of dreams. The nerves of the body, which trol the muscles, both voluntary and involuntary, and preserve the secondary part of existence. They make you walk, | blow off." move your arms and in general keep you going. Other nerves, not connected with the muscles or muscular exertions, Provincialisms Abound There, and Are waste their exertions, waste their energy on the various functions of life.

THE NAPOLEON CAT HOAX.

A Popular Riot Caused By a Jester Who Rearly Three Thousand Acres of Water Was Never Discovered.

Rearly Three Thousand Acres of Water Inclosed by a Natural Boundary. In 1815, when the vessel containing

IMPORTANCE OF THE NERVES. captive emperor and his guards to live there. This being the case, says the St. Louis Globe-Democrat, the government had determined to send out a shipload of cats, the ship to sail from Chester. On a certain appointed day the king's officer would be in the city and would pay sixteen shillings, about four dollars, for fullgrown toms, ten shillings for female cats and and two shillings and sixpence for kittens old enough to feed

themselves. The people of the surraunding country sook the matter seriously, and on the day appointed thousands of cats were brought into Chester. The owners, find ing they had been tricked, became angry, threw away their cats and started to sack the city hall. The police were pnable to deter them and a riot ensued in which a number of the townspeople were injured by the infuriated country folk, who relished neither the jest nor the laughter at their expense. In the three weeks after the riot over thousand cats were killed in Chester and the vicinity. The jester was never discovered, though a reward was offered for his detection and punishment.

BIDDY AND HER NEST.

it Blew Away, but She Picked It Up and Returned It. "I have seen one or two good her stories in the New York Tribune, writes a correspondent of that paper "but I think this one beats them. day lest fall it happened that not far from my house a board was resting on sight, hearing, tasting, feeling and smelling they have to attend to every apart, and somebody had laid an old discarded straw hat on it, the crown lying on the board. An old hen, which was a great pet with the family, saw and laid an egg. We decided to humo her whim, and therefore fastened the hat to the board. She continued to lay in this queer nest for some time. But one day the hat became unfastened in some way and blew off the board. When biddy saw this she began to sing disconsolately, and we thought she would give up the hat and seek another nest. But we were mistaken. In a little while she seized the hat in her bill and flew with it on to the board, where, after a great deal of fussing, she adjust ed it so that she could lay in it. After that we fastened it so that it could no
