THE HORSE.

Why That Animal Was Driven Before It Was Ridden.

Canon Taylor, in that most interesting book, "The Origin of the Aryans," has raised once more a question which has often attracted the attention of scholars, especially those interested in the Homeric poems, says the Academy. Why is it that in the carliest records of the Greeks, Egyptians, Assyrians, Indians, and Celts we find the horse used for drawing chariots, but not yet for riding? Canon Taylor remarks: "It is eurlous

to notice at how late a period men first ventured to mount 'the swift one;' " and he goes on to say that there is nothing in the "Rig Veda" to show that the art of riding was practiced, and that our first notice of it is in the "Zend Avesta." The Homeric Greeks employed the horse almost exclusively for the chariot, riding being only alluded to in some two or three isolated passages, as when Odysseus and Diomedes rode to taken; for I found him too generous a the ships the horses of Rhesus which they had captured. This, however, man to harbor any jealous feelings, and to my gratification we were friends from shows that it was hardly from fear that the Greeks did not habitually ride our first meeting. It is pleasant also to know that this relationship extended instead of drive their steeds. The over many years, and up to the day of same remark applies to the ancient his death. Britons, who, according to the ancient accounts, performed wonderful feats of character of George Holland will be re-called by all who knew him. He lived,

agility in running out and standing upon he pole of the charlot. The true solution may probably be this: The primitive horse that ranged over the plains of Europe and Asia was too small when he was first domesticated to carry a man for any great time or distance on his back. This, of course, would render him practically useless for warfare. There is ample evidence to prove that the primitive vild horse was of very diminutive size. Probably of all his descendants the Shetland pony is his best representative. Canon Taylor says (speaking of the enormous deposit of their bones found at Solutre, near Macon, which unfolded a camp-stool, and quietly scatcontains from twenty thousand to forty ing himself in front of the fountain be-

"This primitive horse was a diminu-tive animal, not much larger than an ass, standing about thirteer hands high, the largest specimens not exceed ing fourteen hands. But the base supposed that it was intend. high, the largest specimens not execute ing fourteen hands. But the head was of disproportionate size, and the teeth were very powerful. He resembled the tarpan or wild horse of the Caspian tarpan or wild horse of the Caspian

Even long after he had been domesti-bewildered look that he was fishing in cated he remained very small, as is proved by the bits made of bronze and staghorn which have been found at Mo ringen and Auvernier, which belong to ringen and Auvernier, which belong to the latest bronze age. "These bits are only three and one half inches wide, and could now be hardly used for a flood of tears, and and could now be hardly used for a while affectionately embracing the child's pony."

guardian of the law contrived to faster Let us now turn to Herodotus, where, the fish-hook into the collar of the pe speaking of the unknown regions to the liceman's coat, who walked slowly and orth of the Danube, he says that the north of the Danube, he says that the only people he can learn of as inhub-dragging the line and rod after him. iting the region are called Sigyannae. The crowd, seeing the joke, roared with who wear the costume of the Medes, laughter, as Holland quickly made his and whose horses are shaggy all over way to the nearest omnibus, which he the body, being covered with hair to a reached before the infuriated policeman depth of five fingers, and are small and could catch him." flat nosed and incapable of carrying

ings, now nearing completion, are so renowned as a most beautiful and interesting spectacle that not only do from five to twelve thousand people a day, at a cost of twenty-five cents apiece, inthe company, upon receiving evi-sof the fact and a transfer of the travelers who pass through Chicago do vote a day or more to the same purpose. Hundreds of distinguished foreigners and thousands of prominent men from the various states of the union have availed themselves of this privilege, and it is not exaggeration to say that all, without exception, have been most agreeably surprised at the splendor and magnitude of what they witnessed, and have departed very enthusiastic over the bright prospects of the fair.

The Father of Waters.

length, and the Amazon 4,029, while the St. Lawrence is only 1,450 miles, the latter is held to comprise the largest body of fresh water on the earth. Including the great lakes and its tributaries, covering about 73,000 square miles, the aggegrate mass of water is
