#### SEX IN POPULATION.

The Women of the United States Outnumber the Men.

Official Statistics Showing the Various Changes 1: Numbers, Nationality and Location of the People in This Country.

The population in this country is ell divided between the two sexes, although according to a bulletin just lasted from the census office there are about 1.500,000 more males than females in the 62,500,000 of population. In the New England and middle states states there are 45,000 more females greatest care must be taken not to let tion, including the district, the females planted as soon as gathered or kept in While in the northern central section and should be planted where the tree is the males are in the majority by over transplanting difficult. The European 800,000, in the south central portion this Chestnut is not only much larger and excess reaches only about 200,000. In finer than the American but has prothe western section of the country the duced, under cultivation, a number of predominance of the males is shown by varieties, some of which are highly a majority of over 500,000.

tion returned in 1800 are males and 48.79 and generally fruit until ten or twelve percent are females. In 1850 the males represented 53.88 per cent and the females 40.12 per cent and the males 49.12 per cent. The percentages | of males and females in 1870 were about the same as those just stated for 1880, or 50.55 per cent, for males and 49.44 per cent, for femiles, while in 1860 they were very nearly applies to these two characters—small size and early were very nearly applies to these two characters—small size and early fruitfulness. vere very nearly similar to those given for 1800, or 51.10 per cent, for males and 48.84 per cent, for females. The excess if the American species trees can be of males over females in 1890 is 1,513,-510, as against an excess in 1880 of 881,-857. In 1870 the males only exceeded the females by 423,759, whereas in 1860 there were 707,687 more males than females. In 1850 the males exceeded the females by 182,411. The very large ex-

#### CHESTNUT GROWING. faormous Quantities Consumed in This

Country.

The supply of chestnuts never equals he demand in this country, and many istricts in which the trees are abunfant derive a very respectable income from the sale of the puts. This indusry might be made far more productive and profitable than it now is by some ittle effort toward cultivation. The thestnut cannot be grown successfully and. It prefers loose, annly soils, or such as has been derived from the decomposition of slates and shales. It is grown readily from the seed, but the the nuts become dry. They should be outnumber the males by some 20,000, moist sand until ready to plant. The country as far west as Nebraska to stand, as the long tap root makes esteemed for the superior quality of In this district the uniles number only their fruit. The trees do not grow se 100,684, while the females number 120,. Targe as the American, but come into 808; 51.21 per cent. of the total popula-bearing more quickly; the latter does hough not very hardy, is quite dwarf in habit, and, while beginning to fruit 'ruitfulness-give them special value of the American species trees can be secured which will bear earlier and produce larger nuts than our native species.

#### BROUGHT TO TIME.

A Scene That Was as Intensely Dramatic cess of males in 1800 is readily accounted for by the greatly increased number of immigrants who have come to this country since 1800, over three-lifths of the entire number of immigrants being males.

\*\*Rever did the heroine of a play receive such sympathy from her speciators as was sent representation of the scene material and total one recent evening, says the Detroit Commercial Advertiser. During the afternoon an attractive couple entired the head. The young many was about tered the hotel. The young man was about twenty-five years of age. He appeared out of place in the hostelry. The most showy feature of his attire was a huge whit on in 1860 are for the. The young lady was taller and more eign born, as agreed the per cent, in portly than her companion and possessed

He Slow Now. since a trotting horse made a record of 2:20 or better in barness, says the Omahe always mixed pine mixed her with his tobacco, and when I ushed the reason animal which performed the feat was a maximum of thirty-seven. tobacco, and when I asked the reason he answered that it was to blar out his head." My head needed clarin out," her mile October 15, 1859. That event and I tried the old fellow's remedy. It made Flora Temple the talk of the many Flora Temple the talk of the least gallant of men could not call her whether the man who commits suicide worked like a charm. When I came country, and most persons predicted home I recommended it to my friends, that her record would never be beaten and several who were suffering from the season of the seas greatly. An enterprising tobacconist record, and each year the number to whom I spoke about the 'cure' got a greatly increases. In 1890 it was in supply of pine needless and began the creased over 25 per cent, the number manufacture of cigars, cigarettes and smoking tobacco thus medicated. The wonderful increase in speed of our racing horses is one of the evidences of the marvelous perfection of modern methods. It is impossible to road a history of the uniferent for a single year without certain that the complaint of tabacco and impossibility thirty years are was accomplished by nearly one hunfred young the received for the evidences of the marvelous perfection of modern methods. It is impossible to road a history of the turf even for a single year without perfect the semile of the sall savelled remedies that sell as well, or that have given such universal satisfaction. We do not besitate to guarantee them every time, and we stand ready to refund the nurchase price, if satisfaction. flavor of tobarco thus dosed is very ing horses is one of the evidences of the piensont, and the sclor of the smoke is marvelous perfection of modern meth-

HE PAYE OF A LEARNED PIG. low Fauti, the Ci wa, Succumbed to Tempia. Lon-

About eleven years ago a famous hog f almost superporcine intelligence was attached to the Imperial circus at St. Petersburg, where it basked in the sunhine of fashionable favor throughout two gay winter seasons, remarks the London Daily Telegraph. This sagalous creature, at once a ready reckoner. artune teller and deft executioner of card tricks, was the property of one Tanti, a famous Italian clown, who had trought it up from infancy and taught

it all its varied accomplishments
Our might he and his pig were bidden
to a gathering of young officers of the ian guard, supping together after the performance, and were called upon to repeat the programme of the evening of course, on payment of a handsom fee. At the conclusion of the show one of the officers officed Tanti one to u said rubles for his pig. The clowed clined to sell, pointing out that the do elle and elever animal constituted his chief source of income, and that, more erer, he was far too fond of it to part from it. Upon this the officers proceeded to tempt him by outbidding one another until they ran the price of to carned pig up to six thousand rubles.

This sum, the equivalent of over sever hundred pounds, and the reflection tha he could probably train another pig replace the one thus exorbitantly r ued, finally induced Tanti to sever the offer, little thinking to what a dis mal fate he thereby consigned his pet Next day the luckless animal daughtered by order of its purchase and sent to the clown's lodging with a message to the effect that "no doubt Signor Tanti would like to taste a porker which had been so profitable to him in life and death allice."

The whole grim story, equally dis-creditable to all concerned in it, got wind in St. Petersburg and made a painful impression upon Russian society. A severe reprimand was ad-ministered to the officer whose cruel freak had caused the death of a public favorite, and Tanti's popularity sensibly declined. Oddly enough, a few weeks later he was fired at while cutting capers in the ring by an eccentric Polish nobleman, whose bullet just missed the clown, burying itself in the sawdust at his feet, and causing him such affright that he fled from the cir-

cus like one demented. When, interrogated as to the motive of his extraordinary conduct, the Sarmatian magnate-a well-known sports man and patron of the circus-calmly replied that, "having been much di-verted by the clown's feats, he had felt himself bound to fire a salute in Tanti's honor." Shortly after ward the recipient of this strange compliment quitted Russia for "other

#### DANCE OF BIRDS IN FLORIDA. Poetic Description of a Beautiful Scene

Witnessed on a Tropical Lake. The sky was an unbroken sea of pale ch a pink, says a writer in Kate Field's Washington, as is found only in climes that are fanned by a breath from the tropies. The tall, grim, south en pines surrounded the lake-some ong since dead, but time had turned them to a silvery whiteness, while the gray moss hung in long festoons from their grotesque limbs, making the scenes weird in spite of the roseate sky. As we stood for a moment to drink in

the soft, silent beauty, a flock of thir teen curlew flew over our heads, lighting here and there among the pines. Some were blue and some pure white. After sitting for awhile—as if to smooth each ruffled feather—one flew o the center of the lake, and after lowly flying hither and thither as if lake, flying side by side, then in dreamy scription to some charity. movements parting to meet again and float wing to wing above the but the soft, sweeping movements were never broken. No fluttering haste of withdrew, and it was only five minutes motion, just a dipping, swaying em. after when a man entered and asked wild cry from the treetops as if some voice was urging them on or sending forth a shout of exultation. At last from all sides they gathered and formed a circle, two by two, like happy lovers, save the one curlew who, like a white-winged chief, led all the rest. Round and round the lake they flew, then mounting higher, soaring above the tallest pines, southward they hastened on their joyous flight, and the forest soon hid them from our gaze.

Frice, facts. tween the headwaters of the Tobigue and Miramichi rivers. For days his search was unavailing until one day about thirty miles away from any set-tlement and in the heart of the forest, he sighted the object of his search. It with all Sad consquences, stranguary, low was a magnificent specimen, fully six unasual discharges between the dependent feet high. At this season its antlers bad been shed but the new ones were go already jutting both. The dogs were sot to nipping the moose in the rear. driving it toward a tree. Sellick, creeping around, andenly threw his lasso over the animal's head, twisted the rope

prisoner. wading the morasses, or fording the wading the morasses, or fording the rivers which marked the thirty miles distance between the scene of the capture and the first settlement. The hunter at times had to employ a catamaran to cross the streams, the moose swimming behind. Finally he reached swimming behind. Finally he reached the Intercolenial, took a box car, which DR. DODD'S Cure for was just high enough for the moose, and brought his prize to Moneton.

#### A WONDERFUL CREATURE.

The Chameleon and Some of Its Striking Peculiarities.

The chameleon has for ages been an object of curiosity, not only on account of its ability to change its color at will, as one might suppose who had read ac-counts which mentioned only that one characteristic, but also on account of a remarkable power which induits of the creature instantly changing its form. At times it takes upon itself almost the exact form of a mouse; again, with back curved and tail creet, it is the exact counterpart of a miniature crouching lion, which no doubt gave origin to its name, chamel-leon, which clearly means "ground lion." By inflating its sides and flattening back and belly it takes upon itself the form of an ovate leaf, the tale acting as the petiole, the white line over the belly becom-ing the midrib. When thus expanded it also has the extraordinary power to sway itself over so as to present an edge to the observer, thus greatly adding to its means of concealment. As is well known, the least excitement in handling will cause a change in the In its normal state it is of a light peagreen. When excited the groundwork remains the same, but transverse stripes about thirty in number appear on the body. These stripes, which are of a very dark green to begin with, soon change to inky blackness. The prevail-ing idea that the chameleon takes upon himself the peculiar hues of whatever he is placed upon is as curious and wide spread as it is erroneous. Placed in boxes lined with red or blue silk, they retain their pea-green color with no leaning toward the brighter hues of the surroundings.
