TELEGRAPHING EN ROUTE. A Pruitful Cause of Railway Accidents

May Now Be Removed. Telegraphing from a train in motion has for some years been practiced in this country, but in this as in many other electrical applications America is ahead of European practice, All Europe stood horror-stricken not long ago at the awfulness of a railway accident on the Riviera. The stationmaster dispatched a train on the wrong line to its doom of rushing into anoth er train and erashing over the precipice. Belis were rung and people shouted, but there was no means of stopping the train wrongly started, and

the stationmaster shot himself as he heard the crash. This and other accidents more or less faith for a similar, says the Pittsburgh Dispatch, have appealed so strongly to railway directors for the necessity of establishmild laxaing a means of communication from trains in motion that European engineers are now engaged in testing varirious systems whereby this can be ef-Some recent trials at Algeria are said to have been most successful. The tests included the exchange of telegrams between a train in motion and the station; between two trains in motion; the telegraphic stoppage of a train; started and out of sight, it was ordered to stop, start again, and return to the station: two trains started on the same track, and approaching each other at an express speed of nearly one and one-quarter miles a minute, avoided collision by mutually and automatically wavning each other by an indication of their direction, and the position, according to kilometer posts, which they had attained. The signaling arrangements are carried out by M. Etienne, the well-known inven-tor. The fact was established that every train can be kept within call of the station at any point in its route, and thus one of the most fertile causes of frightful accidents may now be re-

> CAMEO CARVING A NEW WHIM. How Fashionable Women Cut the Dell-cate Shells.

> The latest whim is nothing more nor less than cameo carving, according to the New York Recorder. Many a dainty boudoir has a little table in one corner where "gravers," "scoopers," and various other mysterious instruments of the craft are kept.

"How do they manage it and do they make real cameos?" some one

and scoopers, and half a dozen of these, of various sizes and degrees of finethe cameo is cut the process of polish-WISCONSIN CENTRAL LINES ing begins, and this requires patience surrender necessary. and still more patience.

The shell is then washed with warm water. The second polishing is done land. polish is thus obtained, and, after beng once more washed, the work is five dollars each. From a good shell taken.

Flying Lizards of Borneo.

cording to the testimony of our est reliable naturalists the only genus flying serpent" now known to inabit the earth is a family of reptiles hich make their homes in the great orests of Borneo, mentioned by Meek, Williams, Kinne and others as "the flying lizards of the South seas." The best known species of this flying saurian is Draco Volens leekii, a striped, snake-like lizard about fourteen or sixteen inches in length when full grown. The primary colors of Draco are red and yellow, in bands, dots, crescents and stripes, the red predominating to such an extent that the creature appears as a carmine rocket when sailing through the air. Some have declared that his wings are "sails" like those of the American flying squirrel, but Meek says "they approach true vings and can be used by the little saurian to guide himself at will,"

A Borneo Superstition. The pearl hunters of Borneo and adcent islands have a peculiar super-When they open shells in earch of pearls, they take every minth ind, whether it be large or small, and mt it into a bottle with a dead man's as "seed pearls," or "breeding pearls," and the natives of the islands menloned firmly believe that they have the powers of reproducing their kind. For every pearl put into the phial, two grains of rice are thrown in for the earls to "feed" upon. Some of the white gem hunters of Borneo believe n the superstition as firmly as the na-It is said that nearly every but along the coast has its "dead finger" bottle with from nine to ten times hat number of "seed pearls," the deaying digit and the rice carefully towed away among them.

What Makes Ca Thirsty. Thirst is simply a sensation by which a lack of fluids in the system is made known, and in a state of health it is a generally faithful indication of the ants of the body. Natural thirst is first indicated by a peculiar dryness of the mouth and fauces, caused by a failare of the pharyngeal membrane to secrete a due amount of liquids, but if fluids were to be introduced directly into the stomach through a tube, and not by way of the fauces-as has been done in some unusual cases—the im-mediate absorption thereof instantly allays the sense of thirst, from which it has been supposed that the sensa-tion of thirst is in the nerves of the stomach and that the throat sensation is a kind of reflex action.

A FAMOUS NAVAL DUEL.

Recalled by the Recent Disaster to the Kearsarge.

The Memorable Encounter That Freed Northern Merchantmen from Foe That Wrought Havee Among Them.

The Alabama put into the harbor of Cherbourg, France, in June, 1864, to effect some necessary repairs. The Kear-sarge, then in command of Capt. John A. Winslow, appeared off the harbor on June 14. The Kearsarge, says the New York Times, cruised off the entrance to the harbor, but did not make the man was sitting on for a few minutes beside him. ton harbor she was promptly ordered back to her berth by the British authorities, and a naval force sufficient to enforce the mandate was in readi-

Capt. Winslow made demonstrations which were equivalent to a challenge, and, knowing t'e character of Semmes, he had little doubt that it would be accepted, and set about preparing his ship for action. The heavy anchor chains were gotten up out of the chain locker and suspended along the sides of the vessel so as to protect the vital parts of the ship. This chain armor was concealed by deal boards, which were nailed over it.

The word was passed through the ship on Sunday morning, June 19, that the Alabama was coming out. The decks of the Kearsarge were cleared for action and the drum beat to quarters. The two ships were almost evenly matched as to size, the Kearsarge measuring 1,081 tons and the Alabama 1,016. In weight of metal thrown in a broadside, the Kearsarge, though mounting one gun less than the confederate vessel, had a distinct advantage, the Kearsarge throwing 430 pounds to the Alabama's 360. The battery of the latter vessel consisted of six thirty-two pounders, 100-pounder Blakely rifle, and one eight-inch shell

ness, are all that are needed. When the Alabama which reduced that vest the ants sel to a sinking condition and made

of her. The vessel measured two hundred 514.99.

The Moujik Czar.

Alexander III. seems determined to live up to his sobriquet of "the moujik czar. He has just affixed his signature to a project of law now being elaborated by the council of the empire, which is destined to render inalienable the landed allotments of the peasants. The object of this measure is, of course, to prevent the seizure of the land for debt by the money lenders, whom he regards as the principal cause of the present distress and agricultural depression in his dominions. For the peasants, when once deprived of their lands, lose every interest in the welfare of their "mir," or community, and drift away to the towns and cities in search of work, where they help to swell the ranks of the unemployed, knew him draw a full house was when who constitute a permanent source of embarrassment to the authorities.

She Took Her Pen in Foot. A curious marriage took place at Verviers, in Belgium a few days ago, when Mile. Elizabeth Kunneich, without arms, was married to her impressarie an Austrian. The woman signed the register with a steady foot and the wedding ring was placed by the priest on her fough toe.

ANTS IN FLORIDA.

More of Them There Than in Any Other Part of the World.

There are more ants to the square mile in Florida than in any other coun-try in the world, says a writer in the Savannah News. There are nots which will measure more than half an inch in length, and then there are ants so small that they can scarcely be seen to move with the unaided eye. There are some ants. But as bad as they are, I have never heard of them eating out the seat of a man's trousers, as a missionary, Rev. Mr. Wilson, once told the writer he saw the army ants do in India while the man was sitting on the earth

But the Florida ants will take out the mistake of anchoring in the port, as that act would have given the confederate vessel a start of twenty-four and actually destroy the bed. They federate vessel a start of twenty-four hours whenever she might choose to leave, it being an international law that beligerent vessels anchoring in a neutral port must not leave within twenty-four hours of each other. The twenty-four hours of each other. The Tuscarora had made that error a short time before, and when she started in pursuit of the Sumpter from Southamppursuit of the Sumpter fro remedies failing. I took to baiting them near their nests with slices of meat, bones, apple and pear parings and when I had from fifty to one hundred thousand out turned a kettle of boiling water on them. I have killed in one week over one millio in the space of a quarter acre lot, and I have almost wiped them out. I had to do this to secure any lettuce plants, and many unobservant farmers complain of seedsmen when they should at-tribute their troubles to insects.

It is very curious and instructive to see how promptly the ants which escape the scalding will go to work taking out the dead, and, after piling them outside first, then go to excavating again and rebuilding their cells and runways. This being done very quickly the next work on hand is the laying in of a supply of food, by hauling the dead bodies of the hot-water victims into their storehouses. You may see a small black ant hauling and tugging at the carcass of a red ant twenty times its own weight, and he always succeeds, in the end, in landing it in the warehouse of the colony Next you may see a sort of ambulance corps searching for the disabled. Thes are taken carefully to the underground house, where the surgeons and nurses are in waiting. Then, too, you may they make real cameos?" some one asks. O, yes, they are real and they are pretty. The shells used for the purpose are "black helmets" brought from the West Indies. There are also the enemy was 1,000 yards distant, then gave a broadside from her starthen gave a

The Experience of a Visitor to a Lumber Camp in Northern Michigan "The most exciting experience I ever had," said T. E. Spencer to a writer for the St. Louis Globe-Democrat, "was in a forest fire near Manistee, Mich. 1 had visited a small lumber camp and vided for the chappers. I was awak end by a strong light from the north and, going outside of the wooden shanty, it seemed to me that the entire world was on fire. It cracked and anapped, danced and jumped as if the demon of fire was holding a high car nival and celebrating the end of the world. From every side could be heard sounds like the firing of cannon and the shricks of human beings. It was the falling of the boughs and the sigh ing of the wind, but I never heard so horrible a sound, nor witnessed so weird and terrible a sight. Hastily awakening the other men in the camp, I mounted a horse and fled from the flames. But the horse could not keep with the progress of the fire. The lurid heavens looked as though they were at molten heat; the air was stifling; the smoke almost suffocated me, while falling leaves and boughs burned my horse, and the sickening odor of burning flesh added to the horror. Within two or three hours I was in an opening, where I was no longer in danger; but my horse was badly in-jured, while my clothing was full of holes where embers had struck me. 1
