CANINE SENTINELS.

How a Noted Moonshiner Evaded the Revenue Officers.

By the Aid of His Faithful Dogs The Illicit Distiller Was Enabled for a Long Time to Carry on His Nefarious Business.

The most noted mountaineer in West Virginia, and perhaps in Kentucky and North Carolina—Jim Day—has at last been captured. The government officers have been trying to arrest Day for over fifteen years, but failed on every occasion. Day, who is a tall muscular, shrewd-looking fellow, has been running illicit stills for over tif teen years. During this time he had sometimes as many as a dozen stills running at one time. The stills were located in the depths of the primitive forests or in caves in the mountain sides, a long distance from roadways and trails. The stills were always have attempted to waylay and ambush sight by itself, and several occelli or Day. They found roads and trails over which it was known he would be forced to travel and they then placed squads in ambush, but, according to

At last the secret of his success in evading the officers became known. Day had a number of thoroughbred dogs which he had trained to scent out revenue officers or strangers and to notify him of their presence long before they could come in sight. When traveling over the rontesor trails leading to and from any of his stills two of Day's dogs always trotted along in front several hundred yards, taking of posite sides of the road. Two would fall back in the rear and one would advance like a scout on each side. In case of an ambuscade the dogs in front would scent the presence of the deputy marshals before they got within one hundred yards of them. They would then return quickly to their master SCOTLAND is going to make a special and inform him by their actions of the exhibit at the Chicago fair of a hundred presence of the enemy. Day would then take to the woods to the right or costume. They will be picked for size left, with a dog in advance, and pass and strength, and not for good looks. After the fair, or before its close if the seen. In case pursuers should come up behind, Day's dogs, which had been weak, they will make a tour of this trailing along, would quickly hear or scent them, and then would hurry for-ward to their master, who, knowing by anovation in anniversary celebrations their actions how close the enemy was at Hutchinson recently by celebrating could easily evade them. With such diamond wedding, from which the guards it was almost useless for the officers to attempt to capture Day. alive, however, and capable of enjoying gust, to start out a month or two later a good thing, so the anniversary was reinvigorated and encouraged by rumors or reports of spies, to fail again and again. Day could be heard of in McDowell county one day, and the Huge Japanese umbrellas are serv- next some one from Taswell, in Viriceable for many things, but one seen ginia, fifty miles away, would report recently is so peculiarly striking as to that he had been seen in that section. deserve especial comment. Peace and Prosperity the Rule During 1893.

Harvests Were Abandant and the Agricultural Classes Enjoyed Many of the Comforts

The year which has just drawn to a close has been remarkable as one of most peaceable and prosperous which has passed within the century. In view of recent occurrences it can hardly be considered uneventful, says the London Times, but these rences were exceptional and do not affeet its general character. The people, as a whole, have never been freer from distress and the evils which follow in its course. Since the year 1820, which in coal, wheat and hogs; third in cattreasured in remembrance, they have not been favored with so dry a agricultural pursuits. Although the hops, third; in wheat, fifth; in silver, total area under cultivation showed a eighth. decrease of 5,305 acres in cereal crops and 21,236 in green crops, and some of the crops were light and thin for want of rain, yet the drought was not felt so severely in Ireland as in England, the soil retaining a large store of moisture from previous years, which was drawn to the surface and preserved the ritality of the seeds and roots.

The result was that the harvest was saved in such good condition and so much earlier as to more than compensate for any deficiency in the acreage under cultivation, which, after all, was but slight. The total extent under cereal crops was 1.489,393 acres, and under green crops, 1,153,527 acres. The extent under clover and grasses was 642,056 acres, being an increase of 18,170 acres, and under hay or per-manent pasture 1,525,108 acres, showing an increase of 6,184 acres. There is also an abundant supply of sound potatoes and of turf, which are appre ciable elements of comfort in the small ment and department of the British farmhouses and laborers' cabins. These advantages have had a tranquil-izing and encouraging effect upon the agricultural classes, who are heartily tired of political agitation, and disposed to apply themselves to more profitable pursuits. There are many satisfactory signs of a beneficial change in the moral as well as the material condition of the poople. Not, they would behave during a storm; the least impressive of these are the result deemed successful. willingness and comparative punctu-ality with which rents are generally paid, the utter failure of the attempts which have been strenuously made to revive political excitement, and the greater readiness to adopt the practical suggestions of those who are competent to give good advice and have no

selfish object to gain. Among the most active and successful of the agencies which are endeavoring to teach them better methods and habits are the congested districts board, the Royal Dublin society, the various educational institutions and industrial companies for employing teachers to point out the best systems of dairy farming and butter making, establishing creameries, and encouraging small manufacturers and cottage work adapted to the circumrected efforts of these several organizations are effecting a marked improvement everywhere, although no reduction has been effected in the amount of actual pauperism, which represents a stage of almost hopeless destitution. It appears from one of the last weekly returns for the year that the number receiving relief in the workhouses was der cultivation 43,999, and outdoor relief 58,165, which

is a few hundred more than in the corresponding week of the previous year. The general trade of the country has not shown much enterprise, but, though limited in volume, it has been sound and steady. Except in two or the valley just along the stream three instances there have been no are still clad in thick clouds, mixed of the failures were those of contractors, one of whom was carrying out maintained, and all the banks have been able to pay good dividends, especially the Ulster companies, which have given as high as from 10 to 20 per cent.

A Chinese Dwarf. There has arrived in Soochow to microscopic prodigy 20 inches in height, fairy-like, through thinning mist, and aged 51 years, and sporting a flowing the sun floats, round and pale, shorm of The small man has a "cocky" sort of way about him which is all his own.

The condor soars higher than any other known species of bird, spend-ing nine-tenths of its life floating above the rarified atmosphere at a height of over three miles above the

Assassination by Bomb

Vaillant, who hurled a bomb in the hamber of deputies in Paris recently, paid only thirteen cents for the can ster that contained the explosive, says the New York World. There are other deadly missiles which the anarchists have learned to make, and the ordinary cane or umbrella will conceal them. The plan is to take the cane or umbrella into the theater, store or stock exchange and lay it upon the floor or counter. The setting of it up in its natural position will cause it to explode with fatal result.

The head of the cane holds two glass ressels, oblong in shape, and each filled with an explosive liquid harmless in itself so long as it is kept away from the others. The cane is carried by the an-archist in perfect safety by being held horizontally. But when lifted up and placed against the wall the fluid in the upper bottle runs into the lower and

the explosion takes place. PRESS PICKINGS.
