

# PATENTS!

## NOTICE TO INVENTORS.

There was never a time in the history of our country when the demand for inventions and improvements in the arts and sciences generally was so great as now. The conveniences of mankind in the factory and workshop, the household and on the farm, as well as in official life, require continual accessions to the apparatus and implements of each in order to save labor, time and expense. The political change in the administration of government does not affect the progress of the American inventor, who being on the alert, and ready to perceive the existing deficiencies, does not permit the affairs of government to deter him from quickly conceiving the remedy to overcome existing discrepancies. Too great care cannot be exercised in choosing a competent and skillful attorney to prepare and prosecute an application for patent. Valuable interests have been lost and destroyed in innumerable instances by the employment of incompetent counsel, and especially in this advice applicable to those who adopt the "No patent, no pay" system. Inventors who entrust their business to this class of attorneys do so at imminent risk, as the breadth and strength of the patent is never considered in view of a quick endeavor to get an allowance and obtain the fee. THE PRESS CLAIMS COMPANY, John Wedderburn, General Manager 618 F Street, N. W., Washington, D. C., representing a large number of important daily and weekly papers, and general periodicals of the country, was instituted to protect its patrons from the unsafe methods heretofore employed in this line of business. The said Company is prepared to take charge of all patent business entrusted to it for reasonable fees, and prepare and prosecute applications generally, including mechanical inventions, design patents, trade-marks, labels, copyrights, interferences, infringements, validity reports, and gives especial attention to rejected cases. It is also prepared to enter into competition with any firm in securing foreign patents.

Joe Stone was brought before a Pendleton justice Thursday afternoon, charged with assault and battery on Mrs. Pambrum. Stone pleaded guilty and paid \$10 and costs. From the evidence it appears that Mrs. Pambrum went home intoxicated and began beating with a club Mr. Stone, who was doing some carpenter work. Stone turned in and administered in return a sound beating, choking his opponent.

When persons are weak and languid from sickness or overwork, feel depleted and depressed, it is an indication that the blood is out of order, and they need help to throw off the miserable feeling. The best remedy for this purpose is Dr. J. H. McLean's Strengthening Cordial and Blood Purifier. It restores lost strength, gives vigor to circulation, promotes good appetite and a flow of cheerful spirits. Price \$1.00 per bottle.

Joseph Buhl, a hropraiser of Lebanon, was returning from his hop ranch Monday night. About 7 o'clock, as he was crossing a bridge over a canal in the outskirts of town, unknown parties struck him over the head with a club or sandbag, robbed him of \$215 and threw his body into the canal. The cold water revived him, and he managed to get out and was helped home. Nothing could be found of the robbers. It is thought Buhl's injuries will not prove fatal.

ALUMINUM PRINTING. Successful Application of the Use of the New Metal. It has been found that on account of its porosity and its peculiar quality of absorbing and retaining transferred impressions, which it possesses in as marked a degree as the lithographic stone, that it is especially adapted for the same kind of work. Its advantage over the stone, however, and that which renders it so much more desirable, is its great lightness; for while a printing sheet of aluminum having a surface of thirty by forty inches, and the fortieth of an inch in thickness, weighs only three pounds, a stone of the same dimensions weighs at least four hundred pounds. As the metal is now selling in rolled sheets at a dollar a pound, and a stone of good quality and of the weight stated is worth one hundred dollars, the difference in price of the two is ninety-seven dollars. In consequence of the increasing demands of the lithographic trade, the supply of the best quality of stone is rapidly becoming exhausted, while aluminum, which is obtained from clay, and which is

"For Years,"

Chesterfield, N. H., "I was afflicted with an extremely severe pain in the lower part of the chest. The feeling was as if a too weight was laid on my face, and it was agony for me to make a sufficient effort even to whisper. They came suddenly, at any hour of the day or night, lasting from thirty minutes to half a day, leaving as suddenly; but, for several days after, I was quite prostrated and sore. Sometimes the attacks were almost daily, then less frequent. After about four years of this suffering, I was taken down with bilious typhoid fever, and when I began to recover, I had the worst attack of my old trouble I ever experienced. At the first of the fever, my mother gave me Ayer's Pills, my doctor recommending them as being better than anything he could prepare. I continued taking these Pills, and so great was the benefit derived that during nearly thirty years I have had but one attack of my former trouble, which yielded readily to the same remedy."

AYER'S PILLS Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Every Dose Effective

that account the most abundant metal on the earth, is practically inexhaustible.

As an illustration of the contrast presented by the two materials it may be stated that one ton of aluminum sheets will do the work normally performed by the two hundred tons of stone stored in one of the largest lithographic establishments in New York City. It may be further stated that while the capital invested in this large supply of lithographic stone is about six hundred thousand dollars, the price of the one ton of aluminum sheets which would be required for the same work would be about two thousand dollars, exclusive of the cost of preparing the metal and the necessary printing blocks which would not exceed two thousand more.

Regarding the quality of the work, the specimens of printing done on the aluminum sheets is such that they can be employed in the finer kind of bond printing and commercial as well as color work. There is one particular in which the metal is decidedly superior to the stone, in its flexibility, which renders it especially available for cylinder printing, by which a two-fold or three-fold speed may be obtained in the printing process.

Experiments of the costly nature have been conducted during the past two years, looking to the perfection of the application of the metal to the purpose of this kind of printing by Mr. L. L. Bullock and Mr. John Mullaly, both of New York city. They have secured patent rights which apply over their processes, and they expect soon to be in the market with a large plant capable of meeting all demands.
