There was never a time in the history of our country when the demand for inventions and improvements in the arts and sciences generally was so great as now. The conveniences of mankind in the factory and workshop, the household and on the farm, as well as in official life, require continual accessions to the life, require continual accessions to the appurtenance and impliments of each in order to saye labor, time and expense. The political change in the administration of government does not affect the progress of the American inventor, who being on the alert, and ready to perceive the existing deficiencies, does not permit the affairs of government to deter him from quickly conceiving the remedy to overcome existing discrepancies. Too great care cannot be exercised in choosing a competent and skillful attorney to prepare and prosecute an application for patent. Valuable interests have been lost and destroyed in the first property of the property of t terests have been lost and destroyed in innumerable instances by the employ ment of incompetent counsel, and especially is this advice applicable to those who adopt the "No patent, no pay" system. Inventors who entrust their business to this class of attorneys do so at imminent risk, as the breadth and strength of the patent is never considered in view of a quick endeavor to get an allowance and obtain the fee. THE PRESS CLAIMS COMPANY, John Wedderburn, General Manager 618 F street, N. W., Washington, D. C., representing a large number of important daily and weekly papers, and general periodicals of the country, was instituted to protect its patrons from the unsafe methods beretofore employed in this line of business. The said Conpany is prepared to take charge of all patent business entrusted to it for reasonable fees, and prepare and prosecute applications generally, including me-chanical inventions, design patents, trade-marks, labels, copyrights, interferences, infringements, validity reports, and gives especial attenion to rejected cases. It is also prepared to enter into empetition with any firm in securing foreign patents.
Write for instructions and advice.

JOHN WEDDERBURN. 618 F Street, Washington, D. C. P. O. Box 385.

AN ALLIGATOR STORY. Lost Messenger Boy in India Discovered

in an Alligator's Throat. "Of all the inhabitants of the great rivers of India the alligator is the most formidable," said Capt. L. E. Ballou, of London, England, recently, according to the St. Louis Globe-Democrat. While I was stationed there several years ago I saw a sight the thought of which always causes a shudder to creep over me. A lady near where I lived had sent a little native boy with a let-ter to a friend at some little distance, with the request to send back a reply Being a trustworthy little fellow some surprise was felt when he did not return after a reasonable absence. After waiting several hours with no sign of the messenger, a searching party, of which I was a member, was made up to try to discover his whereabouts. After ouring the country for some time we came to the river bank and a short distance away saw a dead alligator lying on the shore with its great jaws extended to their utmost. On examining it to discover the cause of so strange an appearance we found to our horror that it had devoured the missing boy, and had attempted to swallow his head whole. This, however, it was unable to do, and had been suffocated in the attempt. The boy's head was still covered by his turban, which, when removed, disclosed the answer to his misress' letter, which he was faithfully bringing back. It was supposed that while attempting to swim the river he had been seized by the alligator, as these huge reptiles are very clever in six minutes, and the third in five minconcealing themselves till their victim utes and forty-five seconds An interis well within reach, and then pouncing on their prey."

SCHOOL LIFE IN ARMENIA. Children Have to Work Harder and Do

Not Learn as Rapidly. There are two classes of schools in Armenia, private and public. The prirate schools begin at sunrise and end at sunset. Each child brings a piece of carpet, which he places on the floor, and upon which he sits all day until sunset, when he carries home again his square rug. The children supply their own books, consequently the books vary from a bible, a prayer book to a newspaper, and when a pupil has learned all in his own text-book he exchanges it with another student, and

As a rule, says the Boston Herald, at the end of the four years' course the children leave school scarcely knowing how to read. This is not owing to the lack of intelligence on the children's part, but the result of the defective

system in teaching them. The public schools are substantially the same as those in America, with the exception that the sexes are taught in separate buildings. Religious instruc-tion is given in the schools, the churches deeming it unnecessary to support Sunday schools. As all the children are of one faith, there is no religious conflict. The course of study in the chools is very hard, because of the different languages spoken in the severai sections of the country. Even the Russian language is studied. In summer the private schools are held out of

PURITY OF WATER.

Clearness and Tastelessness Are Not Nec essarily Proofs of Purity.

The popular standards of the purity water are clearness, tastelessness and colorlessness, and yet they are in reality less desirable qualities than are softness, freedom from putresciple or ganic matter, and stability in storage For instance, says the Literary Digest.a colorless and perfectly clear ground water, especially when high in ni-trates, will, if confined in open reservoir, promote and support a more vig-orous growth of organisms and may beome fouled and polluted to a much greater extent than will many surface waters similarly confined and either deeply colored by dissolved vegetable matter, or loaded with clay and sand in suspension. Likewise, a water meeting the requirements of the popular standand, but containing my magnesia, particularly in the form of sulphates, is unfit for use in boilers and ouses, while a ground water containing peroxide of iron will cause much trouble and annoyance by the deposits of iron rust in the distribution pipes, and will prove very unsatisfactory in washing and cooking.

GRIPMEN ARE ONE-SIDED.

Half of Their Bodies Developed by Hand ling the Heavy Levers. "All the gripmen necessarily must be muscular," said a big Chicago cable train driver recently, "for the physical exertion is great and a weak man could not stand the strain. It's a sort of one-sided trade, though. If a felow sticks to it long he gets bigger on the right side of his body than on the left, for the pulling and pushing, hauling and jerking are done mostly with that side. I don't know any man who's been at the work long enough to beeen many gripmen who were plainly larger, heavier, more muscular on the right side, especially in the shoulder, than on the other side. No; I've never seen the phenomenal enlargement-the 'gripman's arm,' the boys call it—on the left side, for the simple reason that the builders of grip cars don't take left-handed men into their calculations. There are no left-handed grip cars; consequently there are no left-handed gripmen

Baths in Japan Nearly all American and European visitors to Japan speak with admiration of the public baths of that country In the city of Tokio there are between eight hundred and nine hundred public bathing establishments, each frequented daily by at least three hundred people, who pay for the privilege so small a sum that no one is too poor to afford it. Outside of these baths the Japanese are much given to bathing in their wn homes. They are one of the cleanest races in the world. Travelers from the western world frequently express regret that in Europe and America there are no such establishments.

A Household Treasure D. W. Fuller, of Canajobarie, N. Y., says that he always keeps Dr. King's New Discovery in the house and his family have always found the very best results follow its use; that he would not Dr. King's New Discovery is undoubted-WASHINGTON, D.C. If the best cough remedy; that he has used it in his family for eight years, and

HOW TO RUN FAR AND FAST.

Lift the Feet Very Slightly. are many manners of walking, says must visit the court of iluniman than the others. M. de Raoul has other occasion he writes: come to the conclusion that, as far as fast walking is concerned, the best to Nuddea, I happened to stroll into a method is that which he calls marche enflexion. The principle is to run had put to for the night. I had not adwithout leaping, to raise the body above ground as little as possible, to roar all around, and was not a little keep the knees bent, the upper part of practically you are always running after your center of gravity. The feet must be raised only very slightly. de Raoul, who has now some years of experience, says that he can now take any man between twenty and sixty and teach him to run as long as his legs can carry him without getting out of breath. Some men can, on the very first trial of the method, run seven or eight miles without stopping, while with the ordinary tactics, they could not have run over one mile. The first kilometer (a kilometer is five-eighths of a mile) is usually covered in seven esting feature of M. de Raoul's researches is that even after a long run, according to his method, a stiff walk is no trouble at all: the muscles which work in both cases do not belong to the same set, and while one exercise is performed the muscles which minister to the other rest.

PIG AT A CANDY PULL. Surprise of the Porker When He Dipped His Nose in the Dish.

Pretty nearly everyone knows or ought to know what an old-fashioned the "apple bees" and such other counoutskirts of the city thought they would indulge the children in one of these pastimes, and things were made ready. It was just at the end of the last snow, and when the molasses had been boiled sufficiently and had been "tried" by dropping a few drops on a bit of snow, the dishful was placed on the snow just outside the door, the to come upon the dish of sweet stuff. siderably cooled off on the surface, so ually. that when the fellow's nose touched it it was not in the least uncomfortable The supposition is that, with his usual avariciousness, the fellow plunged his "snout" away down to the bottom of the vessel. Naturally he got a pretty warm reception when he hit the mid dle of the mess, and quite naturally, too, he pulled-pulled for dear life. The half-cooled candy stuck to him like a leech, and with an audible grunt he fled as best he might. The people who were chatting within while the to the door just in time to see piggy lighting out, candy and all, for free dom. They gave chase, but they might as well have tried to catch a cyclone. The youngster finally run himself out. so to speak, the candy having meantime cooled out sufficiently to make it quite a difficult matter to remove the that was down for the evening was indefinitely postponed.

M. d'Arsonval, lecturing a short time ago before the Academie des Sciences, drew attention to the fact, says Elec- sisted the engineer. I began to rendering him senseless. Artificial respiration, however, was attempted, and the man ultimately recovered. M. d'Arsonval considers that, in the case of the American criminals executed by means of electricity, death ensues in reality from the absence of any attempt at restorative measures rather than from the passage of a current which is in itself destructive to life.

Serious Business. The following description of a Boer writing his name is quoted from Mr. Montague's "Tales of a Nomad." It is not impossible that some readers even in the United States may recognize the picture. In the old days the Boer eldom used his pen, and when he did there was a regular commotion in the "Hush! Be quiet all of you. Drive out the ducks and the geese, and the pigs and the fowls. Father is going to write his name." And then the old gentleman, with elbows squared on the table, would seize the pen with a flourish, and putting on a determined look as if he were going to tackle an adversary, would bend down his head till it nearly touched his left arm, write his name with many a splutter, and then, throwing down the pen and pushing back the chair, would look round with an air of mingled pride and resignation, and say: "I have done it.'

Smoothers in any treaches

"I suppose," said a traveler, "that a man ought not to sleep in an ordinary sued by an evil spirit. day coach, especially if there is any other man in the seat go to sleep. may be the nicest man in the world. but you don't like to have him lean over against you, and even if all be be without it, if procurable, G. A. Dyke- does is nod, and as likely as not be man, Druggist, Catakill, N. Y., says that will do that, he attracts attention and some of that attention is pretty sure to be devoted to you. Keep the Knees Bent, Lean Forward and Disturbance of the Adjuncts to the Brah

Physiologists and lovers of athletics In certain parts of India monkeys are may be interested in recent experi-regarded as objects of worship. In ments and researches of a French "Reminiscences of Seventy Years' Life, artillery captain, M. de Raoul, who, Travel and Adventure," the author was some fifteen years ago, began to try about to enter the court of a large and find out the most economical and least trying way of walking. There officiating Brahmin said: "No person -the the Popular Science News, some of monkey god-"with his shoes on." which are much devoid of grace, but After some discussion, however, the it may be supposed that as far as effi-ciency is concerned one must be better | without removing their shoes. Of an-In passing up the country, when near

alarmed, on looking up, to behold a the body inclined forward, so that whole army of the largest monkeys making towards me from all quarters. Some jumped on the ground before me, others swung by the bamboos over my head, and many closed up the path in my rear. Several females had young ones clinging to them, but this did not seem to render them less agile than the others. A few of the largest, and apparently the oldest, chattered for about half a minute together; then the whole tribe responded, while all closed

bamboo tope, or jungle, when the boat

What to do I knew not. However, hallooed as loudly as I could to make my people hear, and to my great comme to persevere, but I perceived that when I began to retreat they closed upon me again, without being affected by my noise.

Once more I stood still and gave a tremendous shout, when back they went again. I gained full twenty vards this time before they came jumping around; and just as I about to repeat the call, my hopes were raised by beholding a pocrepit old woman some hobbling

through the midst of them. She shook two or three of them by the paws as she passed; but no sooner 'candy pull" means. It used to beat had she come within hearing than she opened upon me a torrent of abuse for try affairs away out of sight, and was disturbing the sacred animals in their retirement. She motioned me. with ter evening, says the Hartford Courant almost frantic gestures, to depart it chanced recently that a family in the quickly, and her tongue never ceased

till I was quite out of hearing.
I was not long in fulfilling her commands, as the mankeys all seemed im-plicitly to aboy her bidding, and made way for my retreat. When I quitted the jungle I met my servant, who said was coming to tell me not to dis turb the monkeys, as Ibaniman owned that bamboo grove. The old woman quicker to cool off and be ready for it appeared, was employed by the pulling. Some half-grown pigs had Brahmins to give the mustleys food been capering about the yard, likely to every day; beside which they were keep warm, and one of them chanced worshiped by all the people in the country round, who brought offerings which by that time had become con- of rice and sweetmeats to them contin-

> RUB THE OTHER EYE. Good Advice of an Engineer Regarding the Removal of Cinders.

Nine persons out of every ten with a einder or any foreign substance in the eve will instantly begin to rub the eye with one hand while hunting for their handkerchief with the other. They may and sometimes do remove the offending cinder, but more frequently they rub until the eye becomes inflamed, bind a handkerchief around cooling process was going on hurried the head, and go to bed. This is all wrong. The better way is not to rub the eye with the cinder in it at all, but rub the other eye as vigorously as you like, according to a writer in the Medical Summary, who relates the following experience:

"A few years since I was riding on the engine of a fast express. The enencumbrance from the poor brute's gineer threw open the front window, nose. It is understood that the "pull" most excruciating pain. I began to rub the eye with both hands. 'Let your eye alone and rub the other eye RESUSCITATION FROM SHOCK. (this from the engineer). I thought he was chaffing me, and worked the Victims of Electric Currents May Some- harder. I know you doctors think you know it all, but if you will let that eye alone and rub the other one, the cinder will be out in two minutes,' pertricity, that the physiological effects of the other eye; soon I felt the cinder high-tension currents passing through down near the inner canthus, and the human body were very similar to made ready to take it out. 'Let it those of drowning, the result being alone and keep at the well eye, shouted suspension of respiration, which could the doctor pro tem. I did so for a minoften be restored by suitable means, ute longer, and looking in a small such as those employed in case of glass he gave me found the offender on drowning.
