The Great Ranches to Be Cut Up for Small Farmers.

A Large Syndleate Has Been Formed to Control the Land Holdings-Some Particulars of the Mammoth Deal.

A syndicate has been formed to purchase and place on the market over a dozen of the largest and most valuable ranches in northern California. All arrangements for closing the deal have been perfected, and within a few days all the papers required to bind the holders of the vast tracts of land to the terms of the transfer will be drawn up and signed. From present indications the syndicate will close with 153,000 acres, though it is probable that an additional 10,000 of the Cone ranch may be admitted into the deal. All this property, which is now owned and cultivated by a few wealthy men, will be cut up into small ranches of 20 and 40 acres and be improved with dwellings and outhouses. When the vast acreage of the syndicate land is taken into consideration, and the fact that the land has a frontage of 74 miles on the west bank of the Sacramento, besides a large frontage on the east bank, the colossal extent of the big land deal will be readMy apparent.

Arrangements are not completed as to the Cone property, as it is not definitely known whether the original offer of the Cone estate of 3,000 acres will be supplemented with an additional 10,000 acres. Arrangements have been completed for the transfer of 153,000 acres. The most important holdings in the list are as follows: On the west side of the Sacramento river-Boggs, 12,400 acres; Glenn, 41,500 acres; Chambers, 20,000 acres; Finnell, 20,000 acres; Tyler, 2,000 acres; Hamstreet, 1,500 acres; Hart, 1,500 acres; Rawson, 4,741 acres; on the east side of the river-Revis grant, 8,000 acres; Bidwell, 7,000 acres; Cone, 3,000 acres; Wilson, 3,500 acres. These are the principal holdings, and they are interspersed with smaller holdings of 1,000 acres and less.

Mr. Chambers, who has placed 20,000 acres in the syndicate, is a prominent capitalist of St. Louis. His agent and attorney in fact is John Finnell, who has put an equal amount of land into the pool. To expedite the work of dividing the big holdings into small improved ranches, and thus attract settlers to California, a corporation will be formed, to which all the lands enumerated will be deeded eventually. The sale of the stock of the corporation will be used to pay the owners for their property, though many of the owners have signified their willingness to take the purchase price of their land, in part, at least, in stock. Then the plan will be to subdivide the land into classes. Lands are to be offered at prices that will represent their relative value, and whatever surplus is derived above the cost to the corporation will be distributed to the purchasers of the land when the first subdivision of 10,000 acres is closed out. The object is to sell the land at a very low figure, it being the ultimate and paramount object of all interested to secure a subdivision and occupation of the country by actual settlers.-San Francisco Chronicle,

WITH THE SCIENTISTS.

When water freezes it expands with a force which Trautwine estimates at fo not less than 30,000 pounds to the square inch.

The water animals were lower in organism and older in existence than the air-breathing animals. They naturally found their existence easier than did the animals exposed to the vicissitudes of the atmosphere.

A heavenly census is now being taken by the Paris observatory; to count the stars the heavens are photographed in sections. Some of these sections show only a dozen stars, while others of the same dimensions show over 1,500. J. E. Gore, writing on the "Size of the

Solar System," says that "enormously large as the solar system absolutely is, compared with the size of our own earth, it is, compared with the size of the visible universe, merely as adrop in the ocean."
