THE SEA OF SODOM.

Formation of Another Body of Water Like the Dead Sea.

some Historic Facts About the Putrefying Waters - Although Growing Fouler Every Year, They Are Not

Devoid of Life. level of the Mediterranean, while that lower than the ocean. The measurements were made twenty years ago, a long period in a semi-volcanic region. Lake Genesaret is connected with the Dead sea by the Jordan flowing through it from north to south, and engineers and scientists are satisfied that the bed of the Jordan is gradually sinking. My observations of the shores of Lake Genesaret and those of the inhabitants of growing constantly, it seems, and sulthese details, and, the first thing on the some of them alive, more of them dead morning of the night of the dinner, he and barren, rise above the water at a took his completed plan of the tables distance of from twenty to forty feet and seats to a printer in order to have from shore. That they should have the usual diagrams ready for the guid- taken root in the water is impossible, Japan by going ashore at three points, ance of the diners in taking their places. and the supposition is that originally When the hour of 8:30, which had they stood on islands submerged with

The catastrophe which resulted in the destruction of the cities of Sodom and Gomorrah and in the formation of the Dead sea is computed to have occurred about nineteen hundred years before Christ. The Dead sea has puzzled scientists ever since, and many of its remarkable features have now been explained. Its depression below the level of the Mediterranean is the deepest known on earth. The bottom of Lake Genesaret is on a much higher printer's ink on his nose and more on level at present, but if it continues to sink as it has done in the last twenty years a repetition of the events of four thousand years ago is not improbable. tables at the last moment, and that As the world has not been treated to a spectacle of terrestrial evolutions on a grand scale within hundreds of years, It may seem an easy matter for 300 | the creation of a second Dead sea with-

brilliant scheme was suggested. There Josephus, who was born in 37 B. C., some." I tried to drink of it, but found salty taste in the mouth. I asked the fishermen, plying their trade on the lake as in Biblical days, whether the water was always unfit for drinking purposes, and received answer that it grew more and more foul every year. This seems to indicate that the surmises as to the change of conditions in the lake are correct. The water of the Dead sea, as is well known, is entirely unfit for use by man. The stench aris-

ing from it creates a pestilential atmosphere for many miles around. I have never been able to approach the lake in summer, but the natives have informed me that about this time of the year the water, even a foot below the surface, acquires a temperature of ninety degrees. It has been observed that past midnight the temperature of the water on the surface measured in the neighborhood of one hundred degrees. There is, however, one false imrected. The Dead sea is not dead as frogs and pigeons are numerous upon its shores, and all sorts of crawling insects abound there; the sluggish waters, too, are covered with ducks-in fact, the fauna is the same as that inhabiting the shores of Lake Genesaret. specimens of the animal world about the Dead sea are slate colored, while those enlivening the shores and surface of Lake Genesaret wear their ordinary

piumage and scaly dress respectively. The Lake Gene aret, also called the Sea of Tiberias or Galilee, is situated sixty-five miles north of the Dead sea. Its extreme length is fifteen miles, its greatest width six and three-fourths miles. The water is very deep at the shores. In some spots its depth measures one hundred and sixty feet, in more. In the northeast and northwest the shores are flat and swampy; the mountains of Safed approach the lake in the north; in the west we have the called Hermon, and it wears an eternal snow cap. Palms that bring forth no fruiting, papyrus plants and oleander flourish in the neighborhood of the some of which grow over a foot and a parts; in others the pelican holds forth | peeping out. in large cumbers.-Philadelphia Times.

Luckett Ook Execution. "I have half a notion to give up trying to be a man," sighed the New Woman. "What!" shrieled the others.

"There is no use trying. I have made the most strenuous efforts possible feel half scared to death when I gold a dry goods store, and I just e-n't do it." -Indianapolis Journal.

THE BLENHEIM SPANIEL. Most Lovable of the Four-Footed Pets of

Womankind. Of all the pets of womankind, babies alone excepted, there is nothing more lovable than the tiny Blenheim spaniel, says an exchange.

Why this breed of dogs have the name of the palace of the duke of Mariborough no one seems to know. The story goes, however, that the first duke had the breed, and that, on a friend's requesting a puppy, he refused to part with one, but, at the same time, took two o. three blind whelps and threw them to tame eagles.

But in the year 1800 his grace, the duke of Marlborough, was reputed to possess the smallest and best breed of cockers (woodcock spaniels) in Britain. They were invariably red and white, with very long ears, short noses, and black eyes. They were evidently the ancestors of the present Blenheims, which are still bred by the keepers of the lodges at Blenheim and some of the inhabitants of Woodstock.

But there is little doubt that they have been crossed with the pug to give them the very short snub noses which they now possess. Moreover, the breed has become very delicate and difficult to rear. They suffer from brain disease, and are more likely than any other dog to die in puppyhood. "Idstone," the celebrated writer on dogs, remembers the time when the Blonheims were mainly bred in the vicinity of the palace. He suggests as a probable original of the Blenheim the Japanese toy spaniel. The surmise seems very prob-

Six weeks ago I suffered with a very severe cold; was almost unable to speak.

My friends sil advised me to consult a publican form of government.

It was here that Clinton and adjutors, taking advantage of ural topographical route proving and all the statements of the statement o and after taking it a short while was encircly well. I now most heartily recom-nend this remedy to any ne suffering such a cold. Wm. Keil, 678 Selby Ave. sul, Minn. For sale by Couser

Hide Cost of Cigars. One of the funniest things that have occurred in Joliet during the present year, says the Joliet (IIL) Republican, was the mishap of a gentleman who formerly lived on the west side, but is grate bar, by which coal could be sucnow a resident of the city, and whose wife ran the store bill and looked after the household expenses. He was in the habit, by agreement with his grocer, of having his eigars and occasionally goods that were not exactly eigars reckon up the accounts. She finally for several structures. found that the family had eaten over that Pro three car loads of potatoes in less than Tenkyck strung miles of wire around a year, and she just didn't believe that the account was correct. The smoker onstrating the practical use of elecand the smoker's grocer were between the upper and the nether millstone for sion of messages, which was immediseveral days, and it was doubtful who ately applied by Prof. Morse by the use would be pulverized the finest, but of his alphabet. finally an explanation was made that molhiled the wife, even if it didn't satisfy her as to the correctness of the grocer's charge for potatoes.

Can't See the Juke. Here is the serious manner in which a big London daily and a sedate London magistrate treated an old-time American joke: "A strange society was brought to light during the hearing of a case before the Thames magistrate. Several men were charged with stealing a watch from a sailor and were all discharged except Alexander Fullerton, on whom were found a post office savings bank book for £ 49 and a card of membership with a curious title. It bore the following inscription: 'National Liars' association. Having been a member of the above association, and finding you a bagger liar than myself, I must congratulate you on relieving me of this card.' It must be gratifying to the East End community, as well as a tribute to Fullerton's own abilities, that he found no means a proof of a niggardly houseno one worthy of relieving him of the card. The magistrate remanded him self and family to know what use is for inquiries."

A Double-Action Joke.

Phenomenal Time Made by the New York Central.

An Interesting Incident of Early Travel Recalled by a Coincidence of Dates Discoveries of Great Importance.

The phenomenal time record made by the New York Central & Hudson River Rairoad company, on the 11th day of September, 1895, recalls an interesting coincidence of dates of special interest

in the city of Albany. On the 11th day of September, 1609, Henry Hudson, after making several unsuccessful attempts to discover a northeast passage around the continent, under the direction of the Anglo-Dutch East India company, entered the Hudson river, terminating his trip at the head of the navigable waters in the vicinity of Albany, which he named

"the New Netherlands." Hudson did not make the rapid transit of 65 1-3 miles per hour, nor is it possible that his sailing record compared favorably with the speed of the Defender or the Valkyrie, but the result of his discoveries was of vastly more importance, as ft indicated the route which was destined to be followed in the march of civilization and the development of this continent, and has done more for the advancement of science and the arts than any section of the earth recorded in history.

It was here that the first meeting of the colonial representatives was held, resulting in the preliminary steps for the establishment of the present re-

It was here that Clinton and his coadjutors, taking advantage of the natural topographical route provided by nature, inaugurated the canal system. connecting the waters of the Hudson with the lakes, which was the pioneer movement for inland transportation, and was followed by the more rapid railroad system rendered necessary by the demands of commerce. It was here POTATOES WERE EXPENSIVE. that the first institute for the development of science and the arts and the promotion of agriculture was incorporated by Stephen Van Repsselaer and others, which is still in existence.

It was here that Dr. Nott provided the first plan in the introduction of the censfully used as fuel.

It was here that Littlefield brought into use the first self-feeding base-burn-

ing stove. It was here that Squire Whipple first reduced to science the art of bridge charged up as potatoes. One evil day building, erecting a trapezoidal truss his wife took her pencil and began to bridge of iron, and presenting formulas

> It was here that Prof. Henry and Dr. the walls of the Albany academy, demtricity as a power and in the transmis-

And it was here, at the West Albany shops of the railroad company, that William Buchanan, superintendent of motive power, planned and constructed the exicbrated engine 999, and others of the same style, which have gained an international reputation, and without which the success attending the phenomenal achievement could not have been accomplished. It is worthy of note that our Dutch ancestors of the Netherlands, to whom we are indebted for so much, have just launched the largest steamship now afloat of the twin screw type. May success attend their enterprise.-Peter Hogan, in Ballaton Daily Journal.

Points in Good Housekseping. A woman who looks well to the ways of her household should know how long, under ordinary circumstances, certain supplies, such as tea, coffee, butter, augur and coal should last. It is by wife to do so, but it is her duty to hermade of those articles which she provides. This duty may be done so tactfully that no maid could dream of tak-

-Pudding Sauce,-Four tablespoons "Oh, of fine, white sugar, two tablespoons of ing water, stirring very fast: flavor with lemon or vanilla .- Boston Globe.
