THE MORPHINE HABIT

of the Evil. Dr T. D. Crothers has startled the medical profession as well as the public by making a statistical report concerning the history of more than 3000 physicians of the Middle and Easter states, 21 per cent of whom were using spirits or opium to excess. From this report Dr. Crothers deduces the slarming general inferences that at least from 6 to 10 per cent of all medical men are opium inebriates. If physicians, knowing as they do the dreadful consequences of morphinism, become addicted to the excessive use of narcotics, every possible means of preventing the laymen from acquiring the baneful habit should be put in force. Dr. Crothers estimates that there are in the United States from 100,000 to 153,000 opinmists; that from narcotics, and neutric diseases is attributable to these causes. Morphiaomania leads to hysteria, melancholia, soute mania and suicide. It is proposed to restrict the spread of morphinism by agitation for the enforcement strictly and unequivocably of the existing statutes framed to make the procurament of opiates well-nigh impossible, except by physicians' prescriptions in the event of illness. It is suggested that through legislative enactment official inspectors shall be appointed whose duty it shall be to visit all apothecaries and see that of parcotic poisons is enforced Societies should also be formed for the purpose of is scientifically treated. Statistics from two leading inebriate bospitals testify to
