THE CENTAUR COMPANY, NEW YORK CITY.

THE SHIPWRECKER.

His Life Made Up of Hardships, Adventures and Accidents.

The career of the shipwrecker consists of a series of hardships and adventures and accidents and narrow escapes from the first day he enlists with a big wrecking company up to the time he is brought ashore from the grim ship he calls "home" crippled or fatally injured. Of all the professions that demand heavy toll of human life none, not even mining or powder making, is as dangerous as the one of these wreckers. Every year these daring men, who brave storm and wave and tempest to save the stranded liner, to raise the sunken ocean greyhound, to rescue the ship impaled upon rocks and, if nothing else, to save what valuable cargo may be removed from helpless wrecks, meet death by the score. Many of them, exposed of ten for days and nights to the icy blasts of winter seas, to driving blizzards and to drenching storms that bite to the marrow, succumb to pneumonia. Others at work on the pitching, tossing barges have legs or arms shattered during the risky operations of removing masts or of slinging wrecking pumps or other castings that weigh tons. Others have hands or feet so dreadfully frozen that these must be amputated, and still others are wiped out of existence after suffering hours of untold agony and exposure before the eyes of their helpless comrades.—Appleton's Magazine.

HICCUGHS.

A Simple Treatment by Which They May Be Cured.

Did you ever take nine swallows of water to cure the hiccoughs? Do you remember the time some one scared the hiccoughs away by telling you of a whipping due for some meanness? Well, science has been studying hiccoughs and caught the hiccoughs by the "nape of the neck." The nine swallows of water had a little science in it, and so did the scare cure. The scientific hiccough cure consists in pressing down to numbness the nerve that connects the stomach, heart, lungs and brain, the pneumogastric nerve. The pressure partially and locally paralyzes this nerve and of necessity the hiccoughing must cease.

Have the hiccoughing patient sit down and be at ease, with the muscles of the neck relaxed as much as possible. Grasp both sides of the neck somewhat toward the back part and press down steadily and as hard as the subject may permit for about one minute, having the patient work the head from side to side. Within about one minute the nerve will be numbed and rested, and the spasmodic motion will cease. It may require longer pressure in some cases, but the result is sure if patience is maintained.—Ohio State Journal.

Children are not the only holders of the precious key of the imagination. The finest minds often keep the power of "make believe" much to their own and the world's benefit. That such a possession coupled with ardent enthusiasm makes demands on the nerves and strength is shown in the following anecdote, related by the late Moncure Daniel Conway in his autobiography. He was at one time a pupil of that famous man of science, Louis Agassiz.

One particular lecture Agassiz devoted to displaying some fossils of saurians, newly come into his collection. He made the subject a text for a general review of the chain of reptilian life.

As he proceeded, darting off to the blackboard to illustrate, comparing the extinct with the contemporary fauna, he became more and more animated. His face reddened with excitement until at last he said:

"Gentlemen, I ask you to forgive me if today I end the lecture at this point, although the hour is not out. I assure you I have been describing these extinct creatures until they have taken on a sort of life. They have been crawling, hissing, darting about me. I have heard the crawling and hissing until I am really exhausted. I regret it, gentlemen, but I trust you will excuse me."

Our admiration for the grand teacher was such as to make us break through all rules, and we gave him a hearty cheer. He bowed low to us and quickly disappeared.

The Magnet as a Detective.

In America the magnet has come rather extensively into use in the handling of iron and steel castings. Suspended from a locomotive crane, it can also be used for collecting scraps of metal from floors and yards. Large amounts are said to be saved in this way. And as the magnet moves over the ground it may bring to light pieces which have mysteriously disappeared—concealed. It may be, by employees to hide blunders in their work. Some years ago in England the magnet was found useful in a somewhat similar way in the detection of fraud. Manufacturers of bone manure found that they were buying old iron along with the bones. Collectors found that it was profitable to insert bits of old metal in the larger bones and thus increase the weight. So the manufacturers provided themselves with a powerful magnetic apparatus under which all the bones were passed before being weighed. As the bones were slid along a broad groove a large one would suddenly jump up and cling to the wall where the magnet was concealed. On examination it would be found to contain perhaps a rusty old poker in place of marrow.—London Globe.

Carrying a Hippopotamus.

To cut up a hippopotamus is no easy task. In some places the hide is almost two and a half inches thick, and before you have got through a hand's breadth your knife has completely lost its edge and requires to be resharpened. The head and the feet are put on one side to be preserved as trophies of the chase, while the remainder of the flesh is cut into long, thin strips, which, after they have been dried by hanging them on the tree branches, will keep good for a very long time. The ivory of the teeth and tusks, which is of very fine quality, used to be employed almost exclusively in the manufacture of false teeth. Nowadays, says the Wide World Magazine, it is turned to all the purposes of ordinary ivory. As for the hide, cut into strips it is made into sticks, which are as good defensive weapons as one could wish to possess. Treated with oil, they become transparent as tortoise shell and look quite pretty. Out of hippopotamus hide bullock drivers likewise make thongs for their whips which are positively everlasting and fetch relatively speaking quite a good price.

A Squid In Hawaii.

In discovering the failings or eccentricities of a person Hawaiians not only show perspicacity, but an aptness in applying a nickname to the one possessing such characteristics. The politician who changes his faith too often is called a squid (octopus). One species of this animal is caught by the aid of a torchlight in shallow water. While a bag net is held some distance in front of it, so that it can conveniently run into it and be caught, it is prodded behind by the fisherman's foot. Sometimes the squid will go directly into the trap, but often it will run forward, with every indication of being enmeshed, to a point within two feet of the net, when it will suddenly turn about and go back to its starting place. Then it is likely to describe a right, left or oblique angle, always contrary to the fisherman's desire. So in Hawaiian metaphor the politician or candidate who switches from the straight track to a squid.—Paradise of the Pacific.

The Swaffham Tinker and His Dog.

Two quaint figures are carved on the two top pews and reading desk of Swaffham church. According to legend, a tinker had a dream bidding him go to London bridge and a stranger would reveal to him how to find a pot of money. So off he went with his dog, and at the bridge a stranger stopped him, saying, "Last night I had a dream bidding me go to Swaffham and dig in such and such a place and there find a pot of money, but I don't believe in dreams." Then back went the tinker, dug for and found the pot as described and also an inscription bidding him dig deeper, which he did, and found another, and with them restored Swaffham church. The carvings were put up to perpetuate his memory.—London Strand.

The Interview.

As used nowadays by the newspapers the word interview is said to have been the invention of Joseph McCullagh of St. Louis, and, according to the Encyclopedia Britannica, it became popular in England in the early nineties. But it was known before that. A writer on the subject in the Nation of 1869 was possibly the first to use the word in its present sense of a talk with a representative of the press.—Chicago News.

A Great Man.

A Breslau paper publishes this "child's composition" as an extract from Robert Gump's "Psychology of the Child." "Charles the Great was a good, brave man. He had a horseshoe which he broke. Whenever he met a Turk he drew his sword and cut the Turk in two, so that the halves flew to all ends of the world. He wore the clothes only which his daughter sewed for him. He was very pious. When he could not sleep he prayed. Once upon a time he was kneeling at the foot of the altar. The pope saw him there and anointed him, and so he became German emperor. Then he gave the people German names. He founded schools and churches. These learned to read and to write. When he died he sat down in a golden chair and was put in a vault. He is sitting there still."

June 8-Aug 12 C. W. MOORE, Register.

Glacial Wonders.

The grandeur of nature's forces may be understood when one of the glaciers of Disco bay, Greenland, is studied. Helland estimated that it had a thickness of 920 feet, with a breadth of 18,400 feet, and was found to be moving at the rate of forty-seven feet per diem. And this Disco bay glacier was only one of the many. Rink estimates that on the west coast of Greenland there are 120,000 square miles of territory, all contributing their supply of icebergs.

A Difficult Position.

A young captain who was drilling the awkward squad commanded thus: "Now, my men, listen to me. When say 'Halt' put the foot that's on the ground beside the one that's in the air and remain motionless."—Success Magazine.

Children Cry FOR FLETCHER'S CASTORIA

REACHING THE SPOT

It Can Be Done, So Scores of Heppner Citizens Say.

To cure an aching back, The pains of rheumatism, The tired-out feelings, You must reach the spot—get at the cause.

In most cases 'tis the kidneys. Doan's Kidney Pills are for the kidneys.

Thos. Morgan, Heppner, Ore., says: "I feel it my duty to speak a good word in favor of Doan's Kidney Pills. I suffered for several years from kidney complaint and rheumatism. The attacks were so severe that I was laid up for a week or ten days at a time. I finally learned of Doan's Kidney Pills and procured a box at the Slocum Drug Co. This remedy went at once to the seat of the trouble and gave me great relief."

For sale by all dealers. Price 50 cents. Foster-Milburn Co., Buffalo, New York, sole agents for the United States.

Remember the name—Doan's—and take no other.

A recognized authority—The Weekly Oregonian

Going, Going, Gone!

A New York auctioneer was begging the crowd for a bid. He pleaded for ten minutes and then in desperation cried:

"For the Lord's sake, will no one give me a bid?"

A mild spoken gentleman replied: "Why, yes, old man, I'll try to help you out. I bid you good night."

And the kindly disposed one departed, leaving the auctioneer to the tender mercies of a laughing crowd.—Rehoboth Sunday Herald.

Where There's a Will—

Helen's mother passed her the cake, and when the little one went to reach across the plate for the largest piece her mamma said, "Always take the piece nearest to you, dear."

"Well, then, turn the plate around," was the answer.—Delineator.

A Weighty Question.

"I took in \$2 just now," said the first promoter. "Good enough," declared the second promoter. "Shall we issue additional stock to correspond with our increased capital or shall we have lunch?"—Puck.

Folger's Golden Gate Coffee

Just Coffee, but perfect Coffee.

Your grocer will grind it—better if ground at home—not too fine.

EYE EXERCISE.

One Method by Which Poor Vision May Be Improved.

"Have you a high roof?" was the apparently irrelevant question put by the distinguished oculist to the woman who had complained of having bad eyes. "Higher than the roofs of the surrounding houses?"

"Oh, yes," said the woman, "a good deal higher."

"Then what I want you to do," said he, "is to go up there every day and look around for half an hour. That will do you more good than glasses. One trouble with your eyes, and with many pairs of eyes in New York, is that you exercise them so little at long range. They are used to looking at short distances only. Long distance looking is good for eyes. Persons who habitually have a wide expanse of sea or plain to gaze upon very seldom have weak eyes. Of course you cannot move out to the plains, neither can you spend a life on the ocean wave, but you can let your sight travel across the Hudson river every day, and I advise you to do it."—New York Press.

THE AUDITORIUM AT A-Y-P. EXPOSITION, SEATTLE.

Probably the most striking structure on the grounds of the Alaska-Yukon-Pacific Exposition is the Auditorium. It is builded of reinforced concrete, steel and brick and is a part of the rich legacy which is to be handed down to the State University when the Fair is over.

The Auditorium stands upon an eminence overlooking the main entrance to the Exposition Grounds. It is now in use as a lecture room by the University Law School and for all assemblies of students. It has a seating capacity of close to 3000, which can be greatly increased.
