REACHING THE SPOT

It Can Be Done, So Scores of Heppner Citizens Say.

To cure an aching back, The pains of rheumatism, The tired-out feelings, You must reach the spot—get at the cause.

In most cases 'tis the kidneys. Doan's Kidney Pills are for the kidneys.

Thos. Morgan, Heppner, Ore., says: "I feel it my duty to speak a good word in favor of Doan's Kidney Pills. I suffered for several years from kidney complaint and rheumatism. The attacks were so severe that I was laid up for a week or ten days at a time. I finally learned of Doan's Kidney Pills and procured a box at the Slocum Drug Co. This remedy went at once to the seat of the trouble and gave me great relief."

For sale by all dealers. Price 50 cents. Foster-Milburn Co., Buffalo, New York, sole agents for the United States.

Remember the name—Doan's—and take no other.

DRUG DREAMS.

Queer Visions Conjured Up in the Brains of Daring Experimenters.

An experimenter with the Mexican drug mescal is rewarded by many and varied visions. Before him flit myriads of dainty butterfly forms, glistening, iridescent, fibrous wings of insects, revolving vessels on whose highly polished concave surface of mother-of-pearl many strange and vivid hues play. There are elaborate sweetmeats in endless and appetizing variety and living arabesques of gorgeous hues and superhuman design.

He may take up a pen for the purpose of making notes, but will find himself unable to use it. A pencil, however, proves easy of manipulation. As he writes his paper is covered with a soft golden light, and his hands, seen indirectly, appear bronzed, scaled, fantastically pigmented and flushed with red.

Tiring of the visions, he may light the gas, which immediately fills the room with a glorious radiance, while wonderfully colored shadows of red, green and violet flit here and there. Generally, it is said, no feeling of depression or physical discomfort follows the dream.

A medical experimenter in Kentucky soon after taking a large dose of hashish began to feel very excited; a feeling of inner joyousness possessed him; all fatigue seemed banished forever, and his mind ran riot, one bizarre idea after another rapidly passing through his mind. Later his brain appeared to split in two parts, one of which urged him to the performance of comic gestures, while the other as insistently hinted at impending death and suggested restraint and instant medical advice.

While waiting for a doctor he experienced alternate spells of lucidity and periods when all connections between himself and the outside world seemed to be severed, when a chaos of disjointed ideas and wild reveries obsessed him. The duration of these latter periods was never longer than two minutes, but each seemed an eternity. It appeared a hopeless task to follow the minute hand of his watch during its infinite round; long before the sixty seconds had elapsed he gave up the stupendous task in deep despair. The departure of the doctor synchronized with the return of the feeling of impending death, now most horribly intense.

He imagined himself surrounded by grotesque, menacing, cruel visaged monsters. He felt himself expanding, dilating, dissolving into space, as he ascended steep precipices, covered with Brobdignagian creatures somewhat like lizards, overhanging enormous abysses, the while he was overwhelmed by a horrible, rending, unutterable despair.—Detroit News-Tribune.

In Later Years.

"We," remarked the young married woman, "try to see how few quarrels we can have in a year."

"We," said the old married woman, "try to see how few cooks."—Louisville Courier-Journal.

She Does.

Suffragette—We believe that a woman should get a man's wages. Married Man—Well, judging from my own experience, she does.—Boston Transcript.

Cause and Effect.

The Earl of Ennui (dreamily)—Wish I just had er million and ten years ahead of me. Baron Beating—Well, you grab the million and you'll get the ten years all right, all right.—Puck.

He who reforms, God assists.—Spanish Proverb.

A QUEER PARROT.

The Old Lady Had Reason For Surprise When the Bird Spoke.

A young ventriloquist, being out of an engagement, decided to pay his widowed mother a visit for a few weeks. On arriving he found she was not at home. A few days after his arrival she appeared, bringing with her a parrot and cage which had been given her by a relative. The bird not being able to talk, mother and son spent many tedious hours trying to instruct the parrot. After several futile efforts they gave the job up in despair.

Then a happy idea occurred to the son. Bringing his ventriloquist powers into requisition, gently at first, he made it appear to his mother that the bird had really begun to talk. The mother not knowing the nature of his avocation, he was successful in deceiving her. He had an engagement to fill which necessitated his departure.

Coming back after the termination of his contract, he was heartily received by his mother and made very welcome. Soon after his arrival home he commenced and carried on a conversation, as before, with the parrot. Noticing the look of consternation on the countenance of his mother, he inquired what was the matter. Imagine his surprise when she replied: "Why, the parrot died while you were away, and I had it stuffed and put back in the cage."—Pearson's Weekly.

FLY FISHING FOR TROUT.

Why an Angler Considers It the "Best of All Sports."

I am inclined to believe that fly fishing has its chief and most easily defined excuse in the existence of a certain fish—Salvelinus fontinalis, the speckled trout. Here, indeed, is something tangible, a thing which may be taken in the hand—first catch your fish—and locked upon. No one seeing a freshly caught brook trout would say that it was other than a thing of beauty. Its delicate, varicolored resplendency is not equaled by any living thing.

The tarpon, the "silver king" of southern waters; the Atlantic and Pacific salmon, the omaniche, or land-locked salmon, and the grayling comprise practically all the other fishes, excepting the various forms of brook trout, which may be said to possess both beauty of form and coloration. It cannot be denied that these fish are justifiably praised, but it is generally conceded that the red spotted brook trout has nothing to fear from their competition. Of the western rainbows, cutthroats and steel heads the rainbow is the eastern brook trout's nearest competitor, and that is praise enough for the rainbow.

So here is one good reason at least why fly fishing for trout is considered by many the best of all sports.—Samuel G. Camp in Recreation.

Pathos and Humor.

The study of the art of putting things is to be recommended to every one who meditates a plunge into print. Even the writing of a death notice involves a certain amount of genius if the author wishes to keep clear and well defined the serious and the funny.

That this is true is shown by certain quotations from a Leipzig paper given in Bishop John P. Hurst's "Life and Literature in the Fatherland." Here are a few sentences extracted from these obituary notices:

"Today death tore away from us for the third time our only child."

"Last night at 5:30 the Lord took to himself during a visit to the grandparents our little daughter Antoine of teething."

The last speaks better than it knew. "Here died Marie Wiegell, who was mother and seamstress of children two."

It Told the Truth.

A countryman on a visit to Glasgow while walking along Argyll street reading the signboards and the tickets in the shop windows said to his companion: "Hoo can a' thae ham shops be the best and cheapest? Every yin o' them says that, and the same w' the clothes shops tae. They are jist a lot o' learsers."

They continued along the street until, coming opposite a plumber's shop with a big bill in the window with the words "Cast Iron Sinks" printed in large letters on it, he exclaimed: "Well, Jock, here's yin that tells the truth at ony rate. But any danged fool kens that cast iron wad sink."

Lightning Change.

The three-year-old boy on the side seat in the street car turned suddenly to look out of the window, thereby wiping his muddy shoes on the light colored trousers of the middle aged man sitting next to him.

"Madam," exploded the man, "is this your nasty little?"

Here the boy's pretty mother turned her head and looked at him. "—angel boy?" he finished with a gasp.—Chicago Tribune.

Where the Shoe Pinched.

Young Girl (glancing at her pedal extremities)—Oh, dear! My feet are so awfully big! Practical Auntie—But you stand on them all right, don't you? Young Girl—Oh, yes, but so do other folks too.—New York Tribune.

Needless Trouble.

"Did you wash the fish?" a Springfield woman asked her new servant. "Shure, an' plwa's th' use of washin' anything that's always lived in th' water?" asked the girl.—Kansas City Star.

The more talents the more they will be developed.—Chinese Proverb.

MAKING FIREWORKS.

Some Pyrotechnic Products Must Dry in the Open Air.

TRYING FOR NEW DESIGNS.

Staffs of Artists Continually Devising Color Schemes to Be Worked Out in Fire—The Construction of the Set Pieces—Work of the Chemists.

The first step in manufacturing fireworks is the making of the cases, or shells, as the cylinders or other receptacles in which the explosives and the chemicals are placed are called. Practically all of these are made of innumerable sheets of tissue paper pasted and rolled together until the thickness required is attained. Most of these cases are made by machinery and are delivered as wanted to the places where they are to be filled or charged with the materials that have been prepared. All the charging is done by machinery except in the big shells that throw forth sets of stars of varying colors. In these each "star" has to be placed in a certain position so as to explode in just the right way at the proper instant.

Out of doors in pleasant weather the long lines of fuse—"quick match" they are called—are made. These are wound on reels six or seven feet across. Their basis is loose cotton cord covered with various highly inflammable chemicals. "Quick match," roman candles and a number of other pyrotechnic products cannot be dried by artificial heat. They must lie in the open air until the moisture used in mixing the chemicals evaporates.

All the year around the artists on the staff of the pyrotechnic manufacturers are taxing their brains designing color schemes to be worked out in fire. Outside of the big set pieces, which are much in vogue, a great deal of attention is given to rockets, bombs and rocket bombs, of which there are innumerable kinds. When the artist has evolved some striking color effect he turns over his painting to the chemists, whose task it is to combine various combustible ingredients so as to reproduce what the painter has put on his canvas. The race between the art department and the staff chemists is unending. It is the boast of the chemists that they can duplicate in their burning colors any combination of paints that can be presented to them.

These colors are imparted by the heated vapors of certain metals. Sodium, for instance, gives a yellow light, calcium red, strontium crimson and barium green. The number of chemicals, common and rare, employed in the manufacture of fireworks is prodigious. Take blue stars, for instance. These are commonly produced by a combination of chlorate of potash, calomel, sulphure of copper, oxychloride of copper, dextrin, stearin, black oxide of copper, copper filings and sal ammoniac.

Every fireworks manufacturer has his carefully guarded trade secrets. Pyrotechnics in its various branches and as a whole is taught in no university, and there is little printed literature on the subject.

The construction of the set pieces, especially if they are large, is a huge task. First the artist draws the picture. It is complete in every detail of outline and shade of color. This is marked off into equal squares, each of which represents a square foot in the actual reproduction in fire. Sections of light boards, say, 20 by 25 feet are built and laid flat on the ground, and rectangles a foot square are marked thereon. On the section is outlined the picture that the artist has made, with the different colors indicated in their proper groupings. Loose over this is built a checkerboard framework of light lathe. Then come men with strips of rattan. They tack these to the framework, following exactly every line that has been indicated on the boards below, leaving practically a huge line drawing in rattan.

Then come men with thousands of big pins—ordinary pins, but about an inch long. These are set in the rattan an inch apart. These are followed by other men, who cut the heads off the pins. After this comes a gang of men with bundles of little fireworks, two inches long by one-quarter to three-quarter inches in diameter, in varying colors or combinations of color to correspond with the original drawing. These are called "gerbes." When ignited they emit sheaves of fire. These are stuck on the pins and glued, each shade of color in its proper place along the framework.

After this has been done another gang comes with hundreds of feet of "quick match" and connects all these thousands of "gerbes" together. Loose ends are left here and there for firing when the piece is in place ready to be set off. Then these sections are hoisted into their proper positions, and after infinite labor everything is ready for the wonderful delight to the eye, which may last between one and four minutes. So swiftly does the fire run from "gerbe" to "gerbe" through this "quick match" that the biggest "picture" that is usually shown will be aflame in every part in three seconds.

There is said to be little or no danger about firing these set pieces or even in setting off the bombs that explode with such fearsome noise. The ends of the "quick match," where the "port fire" is applied by the men who do the igniting, are carefully timed so that they have plenty of chance to get out of the way.—New York Press.

Without a friend the world is a wilderness.—Latin Proverb.
