#### PHILIPPINE VOLCANOES.

Mayon is the Most Famous, and the Taal Comes Next.

The most famous Philippine volcano and one of the finest volcanoes in the world is that of Mayon. Its height is 8,970 feet, and the volcano is visible at a great distance. Since 1793 records have been kept of its eruptions. In that year many plantations and villages were buried under a stream of lava which flowed down its eastern slope. About 1,200 lives were lost in the eruption of 1814, which buried the country around a part of the base of Mayon under the outpourings of lava and dust. A similar calamity in 1825 destroyed the lives of about 1,500 persons. In the nineteenth century there were a number of severe eruptions, including one in 1886-7 which continued about nine months. An eruption in 1897 killed 350 persons and destroyed much property. Twenty-two violent eruptions of this volcano are on record.

Next to Mayon the Taal volcano is the most remarkable. It is on an island in the lake of Bombon, and the island, built up by its outpourings, has an area of 220 square miles. The volcano is incessantly ejecting dust and vapor from its crater. Taal as well as Mayon has been the center of numerous destructive earthquakes, but no very great eruption has occurred since 1864, when four villages around the mountain were completely destroyed.
