### HORTICULTURAL NOTES.

(Continued from page 2.)

ing it in carefully, they will find the pulp of the fruit greatly improved in both quality and firmness, rendering it much less liable to attacks of disease.

Spraying the fruit, beginning after the blossoms fall and continuing each week until the stone hardens, will assist in controlling both the rot and insects.

This spray should be the modified formula of Bordeaux mixture with Paris green or disparene added.—S. in Fruit Grower.

### Baby Rambler Rose.

This rose is termed by the introducer "Ever Blooming" and "Crimson Rambler." We are growing this rose this season, and have had bushes not over three inches in height loaded with flowers and at this writing have plants that are loaded with both flowers and buds, and will say that there has been very little exaggeration in the high praise that has been shown on this latest creation in the rose line.

We quote from the catalog of the introducer as follows: "A new dwarf hardy crimson ever-blooming rose for low hedges, borders, beds, massing, pot growing or single planting. Never before has such a rose been produced. It is covered all summer long, from June till frost, out of doors, and every day of the year indoors, with clusters of crimson flowers. It grows only about two feet high, needs no supports, and is perfectly hardy. We can scarcely convey an idea of the beautiful effects of long borders of this rose along drives or shorter hedges and formal beds or masses in suitable places. It is the famous crimson rambler dwarfed and made richer in color, and made to bloom the entire year whereas the old rambler only blooms once."

FOR SALE—Two Chatham Incubators and 2 Cornish Incubators each 216 egg capacity, as good as new. F. M. Good, Troutdale, Oregon, near Sam Strebins.
