CHANGE IN METHODS.

Farmers See Necessity of Getting Out of Old Ruts.

Ry W. D. Foster, Foreman State College Experi-ment Farm, Future J. Wash.

An up-to-date farmer nowadays must study the problems that confront him. Consequently there must be a moving out of the old ruts, and the adoption of

the present state of affairs in this re- one which you fancy most and is spect will in the future become merely suited to the surroundings you have to a memory of the past. There will be offer. Pedigree will not make a cow changes. The younger generation of give milk, but pure bred sires are necfarmers that is growing up around us essary in order to have high class will assuredly adopt different methods. If I can read the signs of the times grades. Therefore, it is necessary to correctly, I believe I can safely predict that the state of Washington will, the matter of selection. in the near future, become a great dairy Insist that the sanitary conditions state. Even now the farmer who has a around your stable are the best posfew good cows and "A tends to busis sible. Be prompt at milking time. Give

Many people there are, indeed, who a successful dairyman. would not make even a bare living handling cows. To use a familiar expression, "They are not built that way." Nevertheless, it is certainly rue that no matter how the farmer is Professor Thornber Tells How built, the cow is built to yield value quite material in kind.

Lack of pasturage is an objection to dairying in many parts of eastern Washington, of course, but where alfalfa or clover will grow this hindrance can be overcome. And these two valuable forage plants would grow in many places where they are not found at present, if the land was properly fitted to receive the seed. On the experiment station farm we have two fields of clover that have given splendid returns. Both alfalfa and clover are valuable for feeding

Farsighted dairymen now recognize the fact that there is a better method of pruning, in order to make the trees feeding dairy cattle than by pasturing, especially in regions where land is as valuable as it is in Washington. This well for a young tree to produce large is by the proper use of soiling crops, and silos. A very indifferent mathematician can figure that one acre of This extra growth gives a splendid land well tilled and seeded to some kind of a soiling crop will equal two and one-half acres of the best kind of pas ture land for feeding dairy cows. the case of trees that have been graft-Therefore, even if one has enough land ed, I would recommend that you reto pasture a large herd of cows, it move the suckers just as fast as the would be unwise to do so. Every suc- scions seem able to take care of the cessful dairyman wishes his cow to do entire food supply. warm add one compressed yeast and bake. When done, cut off the top cake dissolved, half a teaspoonful of of each potato and scoop out the in salt, and two cupfuls and a half of sides with a teaspoon. Mash the potaflour. Beat thoroughly and stand aside toes soft with hot milk, and season until very light-about two hours, with salt and pepper and several spoon-Then add the yolks of two eggs well fuls of grated or Parmesan cheese. Mix beaten, and fold in the well-beaten, well, and return the potato to the skin. and fold in the well-beaten whites, Pack the mass in well. Replace the Stand aside for thirty minutes, and tops of the potatoes which were cut off bake in greased muffin rings or gem and return to the oven until hot all

a large acreage, since he cannot grow wheat enough to make more than a living. The dairy cow opens the way to a more lucrative pursuit. Trained effort, however, is required to handle this opportunity to the best advantage, and there must be concentrated and conscientious effort on the part of the dairyman and every member of his

household. It is not my intention to say what improved and new methods.

In the eastern part of Washington purposes. That is a problem which the growing of wheat is an almost exclusive farming industry, but I believe but, as a rule, the cow to keep is the spect will in the future become merely suited to the surroundings you have to

few good cows and "tends to business" is never bankrupt. He has in his possession a certain producer of value. With milk and butter he can go to market twice a week, instead of once a year, and in, many respects he is free from the annoyances that harass the wheat-growers. But there are some things he must attend to if he would nucceed.

Year, people there are, indeed, who

PRUNING TREES.

Procure Best Results.

From Washington State College, Pullman. In response to an inquiry from Sher-lock, Professor W. A. Thornber gave the following discussion of pruning:

"When trees produce too much wood, and not enough fruit, or no fruit at all, it is well to prune them very severely in the summer time, say about June; also cut them back at that time. This is to give the trees a check, and make them produce fruit buds, rather than wood. Here at the station, in the case of young trees, we do considerable early spring, or winter This extra growth gives a splendid sible in consideration of the amount of quently leave a few suckers around the The graft, so that the graft may become ow must have favorable surroundings. hardened, and not make such a soft

"Another good plan, at times feas a large amount of milk at night would and check the growth somewhat in The quicker you can get the cow "filled up," the sooner she will lie down and masticate her food. I venture to assert that when milking time comes, if you have the right kind of a cow, and are the right kind of a master, she will not disappoint you. that way. The western soils and an There are many different kinds of the Cascades, make a practice of the Cascades, make a practice of growing grass in their orchards to prepurposes. Getting Its Strength Out.

Mrs. Wickersham had advertised for an experienced cook." The first applicant who came in answer to the advertisement was a stout, red-haired young woman. Mrs. Wickersham propounded several questions to her, which she answered in a fairly satisfactory manner. Then she asked her:

"How long do you boil tea?" "Well, mem," said the young woman, "some folks biles it longer, an' some shorter. It's all a matter o' taste."

"But you do boll it, don't you?" "Oh, yes, cert'nly; but I've allus thought that two hours was long enough to bile any tea. You can git all the stren'th out of it in that time." A Hard Case.

"His wife earns her own money." "Indeed! I did not know she was employed."

CURES S.S.S. SKIN DISEASES

free from all blemishes and eruptions; but when some acid humor takes root in the circulation, its presence is quickly manifested by some form of skin disease. The skin receives its necessary nourishment and strength from the blood. When, however, this vital fluid becomes a humor-laden stream, it can no longer preserve the healthy, natural appearance of the skin, but by its acrid, impure nature continually irritates and inflames the delicate tissues and fibres and keeps the cuticle in a diseased and disfigured condition. External applications cannot reach the blood, and therefore are beneficial only for their ability to reduce inflammation, and assist in keeping the parts clean. To cure any skin trouble the blood must be purified of the hu that are causing the trouble. S. S. S. drives out the humors from the blood so that the skin, instead of being irritated and diseased, is nourished by a healthy, cooling stream. S. S. S goes down into the circulation and removes every particle of impure matter, all acids and humors, and restores the blood to its normal, pure condition, thereby curing every form of skin disease or affection. Book on skin diseases and any medical advice free to all who write. THE SWIFT SPECIFIC CO., ATLANTA, GA.
