WORKING FOR EUROPEAN TRIP SKIN IN COLD STORAGE

CUTICLE KEPT ON ICE FOR A MONTH IS STILL ALIVE.

hysicians Discover That Skin Taken from the Human Body May Be Kept in Healthy Condition Indefinitely.

Philadelphia, Pa.-Through the sucessful outcome of an operation, perormed on 18-year-old Anna Windt, the physicians at the Samaritan hospital bave made a discovery which may be of incalculable benefit in the grafting of skin. The discovery is that skin taken from the human body may be kept in a healthy condition for an indefinite period and that it may then be used to replace skin that has been burned or otherwise destroyed.

Early this year a man entered the Samaritan hospital to have an operation performed. This operation included the removal of thirty-two square inches of skin from his abdomen. Dr. Babcock had this carefully rolled up and put on ice until he should be ready for the experiment. This was made thirty-five days after the skin had been removed from the male patient. Twenty square inches were taken, smoothed out, and carefully put in place on the girl's arm.

For several days the arm was examined minutely and then it became apparent that the frozen skin was "taking hold" to the natural skin with as much firmness as if it had been taken directly from living flesh

To Stop Bleeding at the Nose. Introduce by means of a probe a small piece of lint or soft cotton, previously dipped into some mild styptic, as a solution of alum, white vitriol, creosote, or even cold water. This will generally prove successful, but if it should fail, cold water may be snuffed up the nostrils. If these remedies fail, and if the bleeding be very profuse, medical advice should be obtained.
