### THE "FIRST LADY OF LONDON"

By the election of her husband to the important position of chairman London county council, Lady Cheylesmore, an American woman, becomes in a sense the "First Lady of London." The county council, of course, is the real governing body of the greater city, and the position of chairman corresponds in a general way to that of mayor of a city like New York, the so-called lord mayor of London "ruling" over only the old city of London-about a square mile in

Furthermore, Lord Chaylesmore himself is half American. His mother was Charlotte Harman of New Orleans and he is a living example of the advantage of wedding the hustling, practical qualities of the American with the liberal conservative qualities of the best English aristocracy. Lady Cheylesmore, who was Elizabeth French, daughter of F. O. French of New York, has become one of the most popular and respected women in English society. She is tall and hand-

some, and possesses that dignity which is so highly valued in this country. Although she has never entertained on a big scale, her affairs are popular and there is keen competition to be numbered among her guests. Her town house in Prince's Gate, fronts on the south side of Hyde Park, a couple of doors west of the London home of J. Pierpont Morgan, in which the American banker shelters his unrivalled collection of art treasures.

### PAYS HOMAGE TO A SERVANT

On the eve of his departure for the land of the heather and thistle, the old gentleman was seen in Loudon Laird of Skibo bade farewell to one of with his gray hair tied behind in a his servants who had been in the servshort cue, and even today one can ice for 23 years. The occasion was find a relic of the pigtail, for the three | made a gala one in the servants' hall pieces of black velvet on the dress at the Fifth avenue mansion, New tunics of officers in the Royal Welsh York, the Carnegie family participat-Fusileers are the remains of the rib ing in the function and being no small part of it.

Skibo castle will be minus its head house maid in the person of Miss Maggie Anderson. In giving her best years in service, Miss Anderson developed some of the thrift for which the The mayor of a French town had, in Iron master is famous, and announced some time since she was going to open make out a passport for a rich and a public house in Edinburgh. ed her with a handsome gold watch and a life pension of \$500 a year. In beautiful, tender, expressive, but one the servants' hall were gathered all the help of the big mansion at eight quarters; 6, wild mustard; 7, wild caro'clock. The haughty Jeems of the upper hall condescended to lend his dignity to the occasion and beamed on simple Sandy from the stables. The house maid | 10, rat-tail plantain; 11, buckhorn; 12, fraternized with the cook, the butler with the groom. It was a truly harmo-

nious family gathering. Mr. and Mrs. Carnegie and their daughter Margaret, still in her teens, and the idol of servants' hall, and Miss Whitfield, the sister of Mrs. Carnegie, were all present. The laird presented the watch to the blushing and a bit flustrated Maggie, and expressed the regrets of the family at her leaving.

### SUGGESTED AS VICE-REINE

the Europe of their time, an American as a food in the British isles.

to be political. Its social side is what now appeals most rapturously to volatile Ireland and gay, dashing, fun lov-

Two women are most prominently spoken of as the likeliest to lead the new regime as vice-reine of Ireland. The first is Consuela, duchess of Marlborough, the self separated mistress of Blenheim palace, which the English

people gave to "Ian" Churchill for his victories in protection of the "low countries." The duchess would make a most dignified, queenly hostess. Only one circumstance seems to bar the way between her and the dream which she has cherished when the Marlborough marriage was made-her domestic estrangement. This, however, appears to be drawing to a welcome close.

Queen Mary has expressed her desire that the duke and duchess should forgive, forget, and begin all over again. And it is hinted that if the proud Consuela consents to be pacified, the vice regal coronet will grace her brow.

### **NEW QUEEN TO BRING GAIETY**

Alexandrine, the new queen of Denmark, promises to delight her subjects. Queen Louise lived austerely, despite her great wealth (more than \$15,000,-000), and the French blood in her veins that come from the Bernadotte line to which she belonged. It is said of her that she never attended a theatrical performance or a ball, Queen Alexandrine is far more pleasure-loving. and the court, when the period of mourning has passed, may well be expected to take on a galety it has not shown for some years. The queen is a sister of the crown princess of Germany. Their mother is Grandduchess Anastasia, a shining light in society on the Riviera, whose liveliness and unconventionality sometimes make Emperor William nervous.

Though Queen Louise is rich in her own right, she is thrifty, and as she held the purse strings during her husband's reign, the Danish royal family maintains its reputation of being pov-

erty stricken. Denmark can afford to pay her sovereign only about \$250,000 and dull brown in color. Such seeds a year, which is not enough to support royal state to compare with the other European monarchs, whose civil list (salaries) run into millions.

Many Americans are already among the intimates of Christian and Alexandrine. Mrs. Robert Goelet is an especial friend of the latter, and last summer when Mrs. Goelet 'isited Copenhagen on her yacht Nahma she was entertained extensively by the then crown princess.

The new king and queen follow the example of Frederick, whose admira tion for the United States was so great that he read American newspapers daily and was a close student of American literature.

# RED CLOVER IS CORNERSTONE OF AGRICULTURE IN SECTIONS

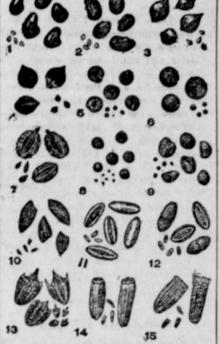

Constitutes From One-Eighth to One-Third of Total Area of Cultivated Lands on Most Successful Farms in Central, Ear and Western States— Utilized as Hay and Pasture.

(By J. M. WESTGATE.)

Either alone or in mixtures with decided menace to his locality. grasses for hay or pasture, red clover constitutes from one-eighth to one- in red clover seed can be removed by third of the total area of cultivated the farmer by the use of a wire-cloth land on most successful farms sieve containing 20 meshes to the throughout the north central and linear inch. Most of the clover seeds eastern states, as well as the western of medium size are held back by such states. It does not give its best re- a sleve and practically all the smaller always quite able to withstand the clover dodder, which is a very noxious more severe winters of the extreme aorth.

ing a permanent system of agriculture in the old world. In this country for a century and a half it has assumed a more and more important role in consequences. The small-grained clover seed imported from Europe largely the J. C. AYER CO., Lowell. Mass. serving the natural resources of the passes through such a sleve. An easy soil, thereby tending to maintain the method of separating buckhorn seed profitable yields of the staple agricultural products.

Red clover is utilized both as a hay and as a pasture crop and often as a soiling crop. It is sometimes used as s green-manure crop to be plowed un-

By means of the nitrogenin Ireland. This great day, so soon to fixing organism on its roots the red come, is the talk of town and country clover plant is able to gather large quantities of nitrogen from the air The question that has rocked the and leave it in the soil in a form which politics of the three kingdoms to the can readily be utilized for growing foundations of political life has ceased crops. If not infrequently happens that the yield of a grain crop can be doubled by the growing and plowing under of a crop of clover.

The most serious problem at present confronting the American farmer in many of the clover sections is the increasing difficulty of successfully maintaining stands of clover upon the

With continuous cropping and the consequent depletion of the soil of humus and plant food the difficulty of growing red clover is greatly increased. This condition must be met and solved, since the loss of clover or its equivalent from the rotation leads rapidly to a run-down farm and unprofitable crop yield.

It should be emphasized, however, that the mere introduction of red clover into the farm rotation is not in itself a sufficient procedure to maintain indefinitely the productivity of the farm. The clover plant adds only the nitrates to the soil, and removes large quantities of potash, phosphorus and lime from the soil, especially when cut for hay and the manure resulting therefrom is not returned to the land. The increased supply of nitrogen may in fact stimulate the soil to increase yields, temporarily, only to leave it, after a few years, in a condition worse than if no clover had been grown.

It is important that considerable care be taken in choosing the seed to be sown. If poor seed is used, the ex- of hard frost, which, in most sections pected crop may be a partial or total of the north, will not be before the

tweeds, some of which may become a

Some of the weed seeds appearing turns in the extreme south, nor is it weed seeds pass through. The true pest in clover'fields, is quite effectively removed in this way. Most of the from clover has been devised. This method consists of mixing with the seed containing the buckhorn thoroughly wetted sawdust. The buckhorn seed becomes sticky on being wet and readily attaches itself to the sawdust. The entire mass is then immediately screened, when the larger particles of sawdust, with the buckhorn attached, are readily separated from the clover seed. This work should be done immediately before sowing the clover seed, which, with the small particles of sawdust that pass the screen, need to be dried only sufficiently to enable the seeding to take place readily. This is an effective means of removing practically all buckhorn seeds and is easily accomplished by the farmer who handles s comparatively small quantity of seed barn, which is not necessarily bulked im-mediately aftr the somewhat dam; bear Scappose: 50 a. cult.; 9 r. house, barn, out-bldgs, orchard, etc. Rabin, Bx 319, Chicago. seed has been screened out.

### WORLD'S YIELD OF INDIAN CORN

Steady Spread and Development of the Crop Has Been Agricultural Marvel of the Age.

The steady spread and developmen of Indian maize into a world crop has been the agricultural marvel of our no longer reflects a single ray of light. age. The corn of the Bible, the corr but you cannot crush a human soul so of Great Britain, is our wheat, not out utterly that no trace of goodness-"king crop." But all the world has come to know and bless the generous grain. Though upward of 86 per cent of the 3,500,000,000 of the 3,750,000,000 bushels, which constitute the world's yield, is grown in this country, Argen

eastern Asia, chiefly in British India Murine Eye Remedy Co., Chicage French Indo-China and the Philip pines. In 1910 the Philippine crop amounted to 14,276,846 bushels. The culture of corn is now general in Af one degree for every 60 feet as we rica. It is the Egyptian fellah's stan penetrate into the interior of the of life, and is even produced for export in the Union of South Africa where the product is known as "mea lies." In Mexico the tortilla, prepared from the grain, is the chief food of the don't know the strength of the exmasses. Canada and Cuba raise corn and it is grown in a small way ir Australia and New Zealand. Save in Ireland, it is rarely used as human food throughout northern Europe.

Outside of the United States the cultivation of corn is most extensive in southern Europe-centralized in a group of states comprising Africa, and Bessarabia, in southwest Russia -where the production ranges from 500,000,000 to 600,000,000 bushels annually.

Corn is not only our king crop, it is also an uncertain and variable one Last year, for instance, there was a great decline in the world yield. The aggregate product of the four leading countries was more than 550,000,000 bushels less than the crop of 1910 and 200,000,000 bushels short of the returns for 1909. The yield in 1911 ir the United States was about 355,000. 000 bushels and in Argentina about 148,000,000 bushels less than in 1910 There were relative shortages ir Hungary and Italy. Just why this should be so our agricultural statisticlans have not made clear, and there has been no sinister rumor of an international combination to restrain the acreage planted.

Peas and Tomatoes.

Where there is a good market for both peas and tomatoes these crops may be grown together to good advantage. The peas should be planted as soon as the ground can be prepared and the tomatoes are set after danger fifteenth or twentieth of May. If the rows of peas are four feet apart, two andesirable from several points of or three pea plants must be removed view. Such seed is constantly being at the required distances in the rows sold to farmers and should be recog- to make a place for each tomato plant, nized and rejected. tI may be poorly i. e., if the tomato plants are to stand developed, many seeds being shriveled four feet apart each way the pea plants will be removed at intervals of will not produce plants. Often red four feet in the row. This plan has been used with entire success in Penn-
