A bottle and cork cost \$1.10; the bottle cost \$1 more than the cork; how much did the cork cost?

Quick now; anything so simple as this you should be able to answer right off the bat. But be sure you get the right answer. To prove this see if the price allowed for the cork is just \$1 less than that for the bottle, and that they both make \$1.10. If so, then your answer is right. Don't fail to spring this on all your smart friends. Not one in a dozen will be able to do it.
