# Cleans Blood Through Kidneys

### A Most Important Function and One to be Carefully Guarded.

The purpose of the kidneys being to filter the blood the question of treating supposed kidney weakness should be con-sidered carefully. Instead of drugs and alleged kidney stimulants the better plan is to purify the blood with an antidotal effect such as you get from S. S. S.

It should be remembered that the kldneys are made up of a fine net work of blood vessels, and it is to stimulate the functional activity of kidney tissue through this capillary net work that S. S. S. shows one of its most remarkable

effects.

The medicinal value of the components of S. S. S. are relatively just as vital to healthy kidney action as the nutriment obtained from grain, meat, fats, sugars, or any other part of our daily food is to the natural reconstructive requirements of the tissues. And there is one component of S. S. S. which serves the active purpose of stimulating the cellular tissues of the kidneys to a healthy and judicious selection of its own essential nutriment. effects. of the kidneys to a healthy and judicious selection of its own essential nutriment. Thus, in cases of rheumatism, cystitis, chronic sore throat, huskiness of voice, bronchitis, asthma, and the myriad of other reflex indications of weak kidney action, first purify your blood with S. S. so it will enable the tissues to rebuild cellular strength and regain their

normal health.
You can get S. S. S. at any drug store. You can get S. S. at any drug store, but take no other so-called blood purifier. S. S. Induced Little Songeters to Build Their Nests.

I have attracted bluebirds by simply making a one-roomed bird-house. To make this bird-house I took boards that were of dull color so as to more closely resemble the trunk of a tree, writes Ruple J. Mitchell of Pennsylvania in the National Stockman and Farmer. I made the house 8 inches high and gave it five inches square of floor space, and put on a slanting roof. The roof projected over the edge in front so as to prevent the rain from entering. I made the bird-house to lean in the direction of the opening, which should face the southeast. The entrance was a round hole 2 inches in diameter and 21/4 inches from the top. I made a small hole 1 inch below the entrance and put in it a small perch
