# **FARMERS' BANK** PLAN OFFERED

Long-Time Loans On Farm Lands Is Specialty.

### Senator Fletcher Introduces Bill-System Includes Local, State and National Banks.

Washington, D. C.-A national rural banking system is proposed in a bill by Senator Fletcher, chairman of the American Commission on Rural Credits and also of the Federal Comby the President.

The bill proposes a system of local national rural banks owned and oper- tree, discovered by Hopkins. ated by farmers, a state rural national bank in each state, to be owned and holders, and the National Rural Bank vates a gallery in the inner living Washington, to be owned entirely by the state rural banks.

To supervise the proposed chain of banks there would be created in the rural banking under the direction of a after passing through a dormant, or arrived at after numerous private con-"rural banking board," to consist of pupal stage, becomes a beetle. This sultations between the delegates. the secretaries of the treasury, agriculture and labor. The division would in July, and emerging into the world be under the immediate direction of a seeks a fresh tree and starts a new "director of rural banking, to be ap- generation. pointed by the President."

The main purpose of the banks on long term farm bonds or notes, secured by liens on farms at not exceeding 60 per cent of their assessed vallocal bank, then by a state bank, and last by the National Rural Bank of the United States, and they would run from 20 to 50 years. The National Rural Bank is designed to have a capital and surplus exceeding \$100,000,-000, while the stock of each local bank would be limited to \$2,000,000.

Senator Fletcher, speaking in the senate to urge immediate consideration of the measure by the banking committee and its passage at the special session of congress, expressed approval of the administration currency bill as a commercial banking bill, but said it would not meet the needs of the agricultural communities because of the necessity for long-term loans.

# ROADS PREPARING BIG TASK

### Physical Valuation to Take Ten Years and Cost Millions.

Chicago-Railroads of the entire country are now busy preparing to take an inventory of the physical value of their properties. The task is one of the most stupendous ever undertaken by any industry in the world. The work will be carried on in conjunction with the Interstate Commerce commission, whose board of engineers will co-operate with a corps of experts to be selected for the work by the railroads. The cost to the government of

TO ERADICATE BARK BEETLE BALKAN PEACE Forestry Department Believed to

Have Pest Under Control. Washington, D. C .- By a prompt campaign against a flourishing colony of bark beetles on the Ochoco National forest in Central Oregon, the government is eliminating a danger which

threatened to destroy millions of feet of timber. Some authorities assert that the

amount of timber killed each year by insects is equalled only by the annual loss from forest fires. Among the most destructive of these insect enemies are the bark beetles, one of which, the mountain pine beetle, is responsible for most of the damage on the Ochoco forest. This deadly little

beetle is less than a quarter of an inch in length, but bears the ponderous scimission on Rural Credits, appointed entific name of Dendroctonus monticolae Hopk., which, being interpreted, signifies killer of the mountain pine

> Its methods of operation are interesting. The mature beetle bores pupal stage, becomes a beetle. This sultations between the delegates. beetle then drills out through the bark

With this "chain-letter" method it soon infests a large area. The gal- the demobilization of the various of cars valued at less than \$1000. The news the tree and kill it, and the beetle's that peace had been arranged caused tors Bristow, Crawford, Cummins, applied. presence is usually discovered, as it great rejoicing here. was in the Ochoco forest, by a patch Loans would be secured first by a of red-brown dead pine trees in the midst of the mountainside of green. In fighting this forest scourge, the method recommended by the bureau of entomology is followed. The simple removal of the bark of infested trees between October and July, while the larvae are still in the tree, is sufficient to kill them. The lumber may then be sold while it is yet sound.

On the Ochoco forest, however, there was no market, and the forest officers found that the cheaper and more effective method of control was to cut the trees and burn them before the new broods of beetles could emerge.

In 1912 the infestation received a decided check by the cutting of 3500 trees. This summer the attack on the insects was resumed with renewed vigor, and 42 laborers, in charge of a forest officer, cut more than 40,000 trees. As a result of these vigorous measures, the government apparently has the beetles under control.

# BRYAN WRITES TO TRIPLETS

# Secretary's Namesakes Get Letter Thirteenth Birthday.

St. Louis-A letter of birthday congratulations from Secretary of State Steering Gear of Imperator Breaks Bryan was received here by William, Jennings and Bryan Taylor, the 13year-old triplets who were named in honor of Mr. Bryan. ## Third War Now Predicted.

London-The second Balkan peace congress having concluded peace on a basis of compromise which is unsatisfactory to all the states concerned except possibly Roumania, the question is being asked how soon a third Balkan war will break out.

Bulgaria has obtained under the agreement reached in Bucharest a considerable portion of Northern Macedonia - much more than the allies were at first inclined to give her-and also about 60 miles of the Aegean seaboard, which will enable her to build the projected railway from Philipopolis to Aegean.

Bulgaria, however, deeply resents being deprived of Kavala, a port on Kavala Bay, which goes to Greece. Also she is confronted with the task expelling the Turks from Adrianof ople, it being clear that the powers will do nothing in this direction. Bulgaria will seek to introduce in the peace protocol to be signed at Bucharest a reservation practically appealing to the European powers for a subsequent revision of the peace treaty.

# **Raising Chicks by Hundreds.**

The farm poultry keeper who raises Only by such cultural methods as 500 or more chicks a year finds a care of the chicks with the least labor. gives them an abundance of air and

The brooder house in use in Missouri poultry experiment station and recommended by Director Quisenberry Plants should not be allowed to go to anyone who raises large numbers of chickens hatched by incubators is 40 feet long by 14 feet wide on a concrete foundation with rat-proof wood floor, says Farm and Home.

A matched board partition through the center provides two apartments, each having its own heater in center of room. If the heater gets too warm for the chicks nearest to it they move back to a comfortable temperature, which they cannot do if kept in a small room. Each apartment will house 2000 chickens and should not be used for less than 500 as their own heat helps to regulate the temperature of the room, and the cost of the building and running heating plant is too large for a small number.

The baby chicks are placed in one apartment and their yard is fenced with 12-inch wire netting so that they cannot get far from their foster When they become large mother. enough to hustle around a little they are placed in the other apartment and allowed to roam at will, but their water supply and dry mash hopper are placed near the entrance so that they do not get very far away. There is plenty of shade in the immediate vicinity so that they do not have to stay in the house to get out of the sun.

The building completed with a good coat of paint cost \$225 and the selfregulating oil heaters about \$20 each. All window openings are covered with fine wire netting to keep out birds and rodents.

### Traing Grape Vines.

The grape vine is one of the most accomodating plants that grows. You can train it anywhere, and in any shape you want. If there is a vacancy in the row you can fill up gaps by layering young canes that have grown from the root of the vine. Or tie a young cane up to the wire to take the place of the vine, and bend the old one down into a trench 6 inches deep and carry it along as far as it will go. Anchor the vine with sods or earth with stones on top, and add more from time to time if needed, and thus cover the wires with a continuous row of vines. If the original vine is in a pocket of rich earth, or

his gigantic job, which involves estimating the value of 245,-000 miles of railroad and its equipment, will be between \$10,000,000 and \$15,000,000, and it will take at least ten years to complete. The cost to the railroads wil be equally heavy.

To carry on the work the Interstate Commerce commission will require a large additional clerical force in various parts of the country working under division chiefs. The railroads themselves will employ only their own men for the work. Valuation departments are being organized by every railroad.

### Sampan Found in South.

San Diego, Cal.-Captain Jack Martin, of the steamer Henry T. Scott, which arrived here Monday night, from Everett, reports that while several miles off Point Arena he sighted a Japanese sampan filled with Japanese coolies. The suspicious movements of closer to her, but failed, as the sampan outmaneuvered him.

sampan was headed toward shore and going fast.

#### Navy Yards May Do Work.

Washington, D. C. - Secretary of the Navy Daniels is considering a plan to have the six new torpedo boat destroyers, bids for which were received at the Navy department from private shipbuilding concerns, constructed at government yards. All bids opened were said to be unsatisfactory, on account of their complicated estimates. It is reported Secretary Daniels will cluding Mare Island. No more than one yard.

#### Thousands Lost In India.
