

WARMTH AND COMFORT DURING THE WINTER MONTHS

can be yours if you have the RIGHT heating system in your Home.

"THE GREAT WESTERN CIRCULATOR"

is the stove you can rely on to keep your Home pleasantly warm under all conditions at lowest possible cost for fuel.

There has never been a greater heater, one that gets so much out of the fuel consumed. One of the greatest improvements in stove construction made in recent years is the device for circulating the air so that all of the room where the heater is located, and even adjoining rooms, will be uniformly and thoroughly heated.

A supplementary flue receives the cold air from near the floor, conducts it upward in contact with heated surfaces and thence over the fire, discharging it thoroughly heated at the top.

Come to the Store and investigate this excellent stove or send for pamphlets describing it.
