"Perhaps we can get the 'inventor' to stay with you, George," said the master, laughing, as he prepared to leave.

"He's been around the works long enough to know when anything goes wrong. Hollo! Hollo! I say! Where is the 'inventor?' Come here. Ah, there he is." And in silent answer to the summons a shock-haired fellow, with large gray eyes and a pale, vacant face, appeared from behind a pile of castings. need a world of watching, but withal wonderfully fit to watch a furnace. He knew all the workings of the foundry by what seemed a sort of brute instinct, though really his strange sagacity in this was a rem-
