

Coast Radio blends with the community through programming and with the environment through their broadcasting!

An Industry Leader in “Green” Radio Technology

In January 2009 Coast Radio installed the world’s first Kinstar antenna. This technology features five 70-foot wooden utility poles uniquely arranged on several acres of forestland, using no concrete in the installation. The Kinstar antenna is considered “green” in the industry because it has a lower profile than other systems and does not require painting or flashing lights.

“Building a tower system that would be compatible with the surroundings and acceptable to the neighbors was our highest priority.”

Jon Thompson - General Manager Coast Radio
