HOME SAFETY STARTS WITH YOU!

Why should my home have smoke alarms?

- Most fire deaths are caused by smoke – not flames
- Most fire deaths and injuries occur between midnight and 8 a.m. when families are asleep
- Seconds count! You only have minutes to escape a house fire
- The earlier a smoke alarm alerts you to a fire, the more likely you will get out alive

Where do I install smoke alarms?

- On each level of your home
- Outside each sleeping area
- Inside each bedroom

What types of smoke alarms are available?

- **Ionization:** Quicker at sensing flaming, fast moving fires.
- **Photoelectric:** Quicker at sensing smoldering fires
- **Combination or dual sensor:** These have ionization and photoelectric sensors in one unit to sense flaming and smoldering fires
- **Smoke/carbon monoxide:** Activated by smoke or carbon monoxide
- **Visual (dual light) and tactile (shaker):** For the deaf and those hard of hearing.

How do I keep my smoke alarm working?

- Test smoke alarms monthly
- Vacuum smoke alarms regularly to remove dust and cobwebs
- Never disconnect or remove smoke alarm batteries for other uses
- Ionization powered with 10-year batteries – replace the entire unit every 8-10 years
- Photoelectric and combination – replace the batteries at least once per year, and replace the entire unit every 8-10 years
- Hard-wired with battery backup – replace batteries at least once per year, and replace the entire unit every 8-10 years

REPLACE SMOKE ALARMS EVERY 10 YEARS

 FIRE PREVENTION WEEK
