Be on lookout for invasive loosestrife weed in Siuslaw region

Purple Loosestrife is easy to spot because it is blooming now (July to September) in the Siuslaw River area. The flowers are pinkish-purple held upright on long, rigid spikes. A great way to identify it is to touch the stems its squarish-shaped stems may have four to six sides. A single plant may have up to 30 stems from a central, woody base, and can be five to 10 feet tall.

It seems to be a recent invader here, with a few known small populations around Mapleton and west to Phey Lane. Its tiny seeds are easily spread by wind, animals or other disturbances, and root sprouts up to 6 feet or longer; little pieces of root or stem will also grow.

Purple Loosestrife invades wetlands and crowds out natives, has little or no food or habitat value to wildlife and affects nutrient cycling. It prefers freshwater wetlands, but can adapt and spread to both saltwater marshes as well as drier areas. It is on noxious weed lists in most states and several Canadian provinces.

An online search for "Identify Purple Loosestrife" yields many great resources and photos, including its lookalikes. Here are some of our locally most common, similar flowers:

Purple loosestrife is an invasive weed that is often mistaken for a harmless garden wildflower in the Siuslaw region.

round stem and fluffy, pink flowers arranged in tight, sometimes lumpy clusters.

• Fireweed — Native plant that commonly grows on more dry ground than purple loosestrife with loose flower clusters, and does not have a square stem. 2-3 inches long seed pods are easily visible below the spent blooms.

• Butterfly Bush — also an invasive weed, it has a round stem, and bright purple flowers grown in a tight, coneshaped head. This bush may get to be fifteen feet tall, with usually drooping flower heads and greyish leaves with fuzzy undersides. Older stems have peeling, grayish

A common question is: Is my garden variety (cultivar) of *Purple Loosestrife safe?*

Originally many garden varieties of purple loosestrife were considered to be sterile (safe). Recent scientific studies have shown that these plants can readily cross pollinate with other garden varieties, as well as wild loosestrife populations.

The majority of wild infestations of purple loosestrife are the result of garden escapes. (www. PurpleLoosestrife.org)

Dakota State University's website has excellent information on this subject, as well as great substitute plant suggestions for your garden. Control:

- Small outbreaks may be removed by digging, being careful to bag the whole plant. Any pieces left behind may grow. If flowers are starting to age, gently cut the flower stalks first and bag them to minimize spreading any tiny seeds, and then bag as much of the remaining plant as possible in a dark plastic bag, tie it securely and let it rot before sending to the landfill.
- Herbicides should only be used with no wind, on a dry, upland area on private property, and at least 50 feet away from any open water. Any herbicide used near or over water requires a special formulation such as Rodeo, with a permit and a specially-licensed applicator.
- · Several agencies and groups are in discussions about developing a coordinated weed response system for this area, and may use biological controls in the future.

Contact Liz Cadiz at projects@siuslaw.org if you know of Purple Loosestrife in the Siuslaw or its tributaries, or for more information.

precipitator fil-ters (ESP filters) if you can. These can help clean indoor air.

The most effective way people can protect themselves is to limit exposure by staying indoors and limiting outdoor activities.

People who must be outdoors may be considering the use of masks to help protect their lungs from wildfire smoke. Masks can create a false sense of security if not properly selected, fitted and used. Here are a few things you should know if you are considering the use of a mask:

 Surgical masks and bandanas don't filter the fine

smoke particles that can affect your health.

• The type of masks that may offer protection are those with a specific type of respirator (P100 or N95). These respirators are not designed for children and are not made in chil-dren's sizes.

• Anyone choosing to wear a P100 or N95 respirator should receive a professional fit-test to ensure its effectiveness. If the respirator does not fit correctly or does not have a good seal, people may think they are protected when they are not. This false sense of security may lead to people taking on activities that continue to expose them to smoke.

jetty.

SILETZ RIVER: Steelhead, spring Chinook, cutthroat trout Summer steelhead are in the river. Fishing is good in

the lower gorge. Casting spinners, drifting bait or using a bobber and jig can be effective.

Spring Chinook are available in the Siletz. Be aware of the regulations for the Siletz, 1 wild Chinook per day and two for the season through July 31.

Trout fishing in streams and river opened May 22.

• Note: The 3.5 mile bridge (aka Steel Bridge) in the Siletz gorge is now open to motorized vehicles, but is only open to public vehicles on the weekend.

Anglers can walk/bike in the road during the weekdays. If anglers do walk in they can park at the one mile gate and start from there.

SIUSLAW RIVER: Cutthroat trout

Trout fishing in streams and river opened May 22. Fishing is restricted to artificial flies and lures through Aug. 31.

WILSON **RIVER:** Steelhead, spring Chinook,

Summer steelhead are present in decent numbers. cial flies and lures through Low clear water can make fishing for summer steelhead challenging, but there can be some good action at first and last light, or on those drizzly overcast days. Concentrate on deep pools and deeper riffles. Drift fishing, spinners, and flies are good choices. Light line, small presentations, and fishing the riffles and deep pools at first and last light can increase success.

> There are still a few spring Chinook available in the Wilson River, although numbers will be very low, especially considering the low runs we are seeing on other basins.

Cutthroat trout can be found throughout the river, with sea-runs beginning to enter tidal areas. Fishing
