

Alzheimer's Disease and Dementia ARE YOU AT RISK?

According to a new study by Johns Hopkins University School of Medicine and the National Institute on Aging, men and women with hearing loss are much more likely to develop dementia and Alzheimer's disease. People with severe hearing loss, the study reports, were 5 times more likely to develop dementia than those with normal hearing.

Have you noticed a change in your ability to remember?

"The more hearing loss you have, the greater the likelihood of developing dementia or Alzheimer's disease. Hearing aids could delay or prevent dementia by improving the patient's hearing."
