

SIDE SHOW

The Garden Bug

Thorn bugs

This insect can usually be found throughout South and Central America, Mexico, and southern Florida, but is sometimes found in more northern locations where its host plants have done well. It causes damage by piercing the plant tissue and sucking the sap. The females lay a single clutch of eggs in the tender bark of twigs, and the eggs hatch about 20 days later. The female actively tends her brood, and can pass a chemical to her nymphs to make them distasteful to potential predators. — Brenda Weaver

MEET CHICKADEE

Chickadee is a senior cat, we are unsure of just how old she is, she came to us as a stray, and was not very trusting of people. She came around to liking people and even wanting pets from them, when she wants attention. She doesn't care for other cats, and would do best in a home with no small children or dogs.

WE NEED A HOME...

MEET GRISLEY

Hi there, my name is Grisy and I am a little over a year old. I am looking for a home that is high energy either going for several walks a day, hiking, playing at the beach, or just several hours of active playtime as I tend to chew if I become bored. I also need a home that is familiar with either Huskies or Akitas and with older children because of my energy level.
