

The Earth's Independence of the Sun.

Professor Pierce, of Harvard college, in a lecture in Boston last week, set forth some facts of interest in regard to the earth's independence of the sun's heat, which may be consoling to persons who accept the theory that the center of our solar system may lose its warmth. Could the organisms upon the earth withstand any great decrease of the sun's heat? To reply to this question he said we must remember that the earth's surface depends for its temperature not merely upon the heat which it receives, but also upon that which it is constantly radiating. With a small reduction of the actual temperature vegetable organisms become less active, less carbonic acid is removed from the atmosphere, and it is wonderful how a small addition to the carbonic acid of the atmosphere increases its power of abstracting the passage of low forms of heat, and so diminishes the planet's radiation. Six per centum of carbonic acid nearly doubles the resistance of the atmosphere to radiation. If then, the supply of heat from the sun were reduced one-half, the small increase of carbonic acid which would occur in the course of nature would furnish the complete remedy for the loss, and restore the temperature needed for life. It is easy to see that this phenomenon would be accompanied by a more even and spring-like distribution of temperature over the earth's surface, which seems to accord with arctic geology. It may be, then, that a diminished sun is not to be dreaded. It is more probable, however, that the heat of the sun is still on the increase. After a time, it may be ages, the sun will have cooled again, and will grow dim. But even then we shall have much heat from it as have the dwellers upon the outer planet of our system; as much light as the animals now have at the bottom of the ocean. We shall still have souls within our bodies and a Father in heaven. Still further on, the ideal history terminates in a total disappearance of all the material light of the present creation, chaos returns, ripe for a new nebular history and a new series of evolutions. But the old spiritual ideal can never be effaced.

—We are pleased to hear of the prosperity of Bro. Chas. Besserer, of the Walla Walla Watchman. He is preparing to build a new office building, and will put into it a steam power press. He deserves prosperity.

—The authorities of the Trinity House, London, have been making experiments with a new kind of gas which has been brought under their notice as not only being cheaper than ordinary gas, but far more effective. The new gas is capable of so much concentration, that the quantity kept in a small buoy, has kept a light burning for twenty-eight days, with sufficient brilliancy to show the position of the buoy to passing ships. The inventor declares that a buoy of ordinary size would contain sufficient gas to keep a good light burning for nine months, so that all our buoys might show lights at night, if gas was supplied to them twice in a year and a half. We shall probably hear more of this, as the claims of the inventor are now being subjected to practical tests.

Beautiful Charity.

By the will of the late Deacon Asa Otis, the American board of foreign missions was made residuary legatee. Bequests of nearly \$750,000 were made—\$500,000 going to foreign missions.

This is from an exchange. What beautiful charity! Half a million dollars to be expended by foreign missions. For what? To convert the Patagonians, Hottentots, citizens of the Cannibal islands, etc.; while hundreds of American-born men, women and children are starving and dying for the want of the necessaries of life. Of course, Mr. Otis had the right to do as he pleased with his own money, says the San Francisco Times, but it makes one's blood rise in rebellion against such a counterfeit on the name of charity as is set forth in the paragraph above quoted. This foreign mission business puts us in mind of the expedition which was sent out at an expense of £9,000,000 to convert the Jews. We believe one Jew was converted, and he was probably caught away from home, and after the converters left he returned to the tents of Israel.

Orchard Grass.

Two kinds of grass going by this name are being raised on Lewis river. D. F. Reid doubting the genuineness of one kind wrote to the editor of the American Agriculturist about them, and received a letter in reply, of which the main points are as follows:

You send as "orchard grass" two widely different plants. Your No. 1 is the true "orchard grass," and a valuable grass, whether for hay or for pasture. To get the best results from it, the seed should be sown very thick, at least two bushels to the acre, as when it stands thin on the ground it forms clumps or tussocks, which make hard work for the mowing machine. Many prefer it to timothy to sow with clover, as it is perfection at the same time as the clover. Your No. 2 is "Velvet grass" or "Meadow soft grass," and with us considered as merely a weed. I have never known it to be cultivated, though it is used in England on barren knolls and other land too poor for anything else to grow. Like yourself, I never saw cattle eat it, and do not think they will, if there is anything else to be had.

You would perhaps hardly be interested if I were to describe the botanical difference between the two, but there is one character by which you can distinguish them. In the "orchard grass" the flowers are at the ends of the branches of the head or cluster; while on the other one the branches have flowers nearly down to where they branch from the main stem. Then the orchard grass is much rougher than the other, which is quite soft and velvety to the touch. I think you will have no difficulty in telling them apart; and while you will no doubt find No. 1 useful, I think you will not care to encourage No. 2.

Very Respectfully,
GEORGE THURVEY, Editor.

A Little Off.

Walla Walla Watchman.

They had a gay old time, in front of a saloon with a little good old man, who happened to be "off" last Saturday. It seems, while he was inside, sampling liquor, some roguish fellow went to his horse, which stood in front of the saloon, turned the saddle and synched it up again. Presently the old man came out as full as a goose, apparently anxious to get home, for he mounted the horse without much ado, but now the trouble commenced. He pulled on the crupper and exclaimed: "Hold up your head!" but no head came up, in fact it was up, but on the other end. He gave another jerk at the crupper, thinking it was the bridle, and again yelled: "Hold up your head, Prince and don't be drinking all day!" Here he looked around to see what the boys were snickering at, and lo! there was Prince's head "way up," like a rooster's. The old man felt as though some one had hit him over the head with a crowbar. He sobered right up, fixed the saddle and turned the horse, we forget which, and silently rode away, amid a peal of laughter. On his way home the old man "swored" off and didn't touch a drop until the next morning.

The legislative committee appointed to investigate the reports with regard to the insecurity of the new state capitol at Hartford, Conn., has reported that the process of constructing the building was changed without the knowledge of the commission, lime-mortar being substituted in place of cement in setting the granite of the piers, to which was due the breaking, disfiguring, and weakening of the piers. It is believed, however, that safety has been secured by drilling some 800 holes in the joints of the granite, removing the mortar, and filling in with type-metal.

—The Bee-hive is a busy place. Mrs. Steers has just laid in a very large stock, consisting of millinery goods, a large assortment of ready-made suits for ladies and children, and an excellent line of underclothing, for the ladies and children. Call at the Bee-hive Store and inspect this new stock. The low price of everything will astonish you.

Send your subscription for the ASTORIAN another year. Help us, that we may continue to help you.
