ASTORIA, OREGON:

THURSDAY MARCH I, 1883

How to Split a Sheet of Paper.

Many people who have not seen this done might think it impossible; yet it is not only possible but extremely easy, as was explained in this paper, several years ago, and recently described in the British and Colonial Printer and Stationer, which is as follows: Get a plate glass, and place it on a sheet of paper; then let the latter be thoroughly soaked. With care and a little dexterity the sheet can be split by the top surface being removed. But the best plan is to paste a piece of cloth or strong paper to each side of the sheet to be split. When dry, violently and without besitation pull the two pieces asunder, when part of the sheet will be found to have adhered to one and part to the other. Soften the paste in water, and the pieces can be easily removed from the cloth. The process is generally demonstrated as a matter of curiosity, yet it can be utilized in various ways. If we want to paste in a scrap book a newspaper article printed on both sides of the paper, and possess only one copy, it is very convenient to know how to detach one side from the other. The paper when split, as may be imagined, is more transparent than it was before being subject to the operation, and the printing ink is somewhat duller; otherwise the two pieces present the appearance of the original, if again brought together. Some time ago, the Stationer says, the information of how to do this splitting was adver-
