HOW TO TAKE OFF A HIDE.

The hides of farm-slaughtered animals have a poor reputation, because of the careless way in which they are stripped. Calf skins and sheep pelts are reduced one-half in value by being cut and gashed, and improperly stretched. When a hide is stripped off it should be stretched at once and DisFiguring Humors. Humiliating Emptions, Remailiating and DisFiguring Skin pegged out to dry, with the flesh side upward. If it is rolled up, thrown into a heap and left to dry in that shape, it is so mean looking that a buyer will offer only half its real value. A few hints in regard to taking off a hide may be useful. The throat should never be slit crosswise, either in killing or in taking off a hide. The skin is slit from the chin down the in killing or in taking off a hide. The skin is slit from the chin down the brisket, in a straight line to the tail; it is then cut around each hoof; the hind legs are slit behind over the gambrel, but the front legs are slit up in front, over the knee. This leaves the skin in good shape for finishing the leather. The head and legs are first carefully skinned and legs are first carefully skinned. ishing the leather. The head and legs are first carefully skinned, and all cutting the skin is avoided. The skin is then easily drawn off by tak-ing hold of it firmly and pulling it steadily. It is then spread out even-This powder never varies. A marvel of purity, strength and wholesomeness. More seconomical than the ordinary kinds, and can not be sold in competition with the multi-tude of low test, short weight, alun or phase powders. Sold only in cans. If there are more than one salted quite freely, and afterwards they are thoroughly dried. If the skins are to be kept on hand they should be closely watched for moth or grubs.—American Agriculturist.

A Manitoban farmer was sharpen ing a stake with an axe, when a flash of lightning, accompanied by a single clap of thunder, came from the only cloud visible, a small one immediately overhead. The bolt struck the head of the axe, splitting it into two pieces and breaking the handle. The farmer was knocked to the ground insensible, but speedily recovered, and upon searching about found the fragments of his axe forced deeply into the ground.

It was a neat trick to send the Hartford to sea in such a condition that she will surely have to be laid up for repairs in some foreign ship-yard. There are people uncharitable enough to assert that the object is to keep down expenses at Mare Island navy yard, so as to make a fine showing for the new administration. If no work is done at any of our navy yards, what is the use of maintaining

Ten years ago the load for an ordinary freight car was fixed at about 20,000 pounds. In 1884 the load carried had advanced to 40,000 pounds and now cars are being put on which will take 60,000 pounds with ease. In the meantime the weight of the car has increased very little. The use of steel rails is said to be the principal agent in bringing about this change.

It is a curious fact that wasps' nests often take fire, as is supposed, by the chemical action of the wax upon the material of which the nest is posee. Many of the fires of unknown origin in haystacks and farm buildings may be thus accounted for.-

Artificial honey imported into En-gland from this country has been found, on analysis, to be made of wheat or corn starch treated with oxalie acid. The fraud cannot be detected by the taste.
