How a Dying Child

CICERO, HANILTON CO., IND., Sept. 19, 1887. The following is a true account of what your S. S. S. has done for our little daughter, Hazel, now four years old. When 12 months old a lump appeared on her heel, which slowly grew larger. The family physician thought it was caused by a piece of broken glass or needle, but falled to bring anything to light. The child became feebler all the time, seeming to lose the use of her leg, and finally quit walking entirely. The middle finger and thum! of either hand became enlarged, the flesh be coming hard. The hip joints became involv ed, so that when seventeen months old she could not stand, having lost the use of leg and arm. Partial curvature of the spine also followed. The nervous system was wrecked, muscles contracted, and there was general wasting of flesh and muscle. At eighteen months of age she was placed under the treatment of a prominent physician of Boson, Mass., but at the end of ten months she had declined to such a degree that she was in a dying condition. This was in April, 1885 We took the child away not knowing what to do. In this dreadful dilemma we were over-persuaded by friends to try "one bot before it had all been taken we saw a change for the better in her symptoms. We kept it up, and have done so to this day, and will keep it up, if the Lord wills, for many days to come, for it has brought our dying Hazel to life, to vigor, to strength and health again. The ashen hue of her cheeks has changed to a rosy tint. She is able to walk anywhere, her languor and melancholy have passed away, and she is now a blithe, cheerful, hap-py romping child. Should you wish to increase your testimonials of proof of the virtue of S. S. S., our names and what we have said is but a portion of what we owe to you, should you wish to use them.

Kindly yours, Bux. F. Swift. GERTRUDE E. SWIFT.

SPINNEY will Guarantee to Ferfeit 8500 for every case of Seminal Weakness or private disease of any kind or character which he undertakes and fails to core.

MIDDLE-AGED MEN

There are many at the age of 30 to 60 who are troubled with too frequent evacuations of the bladder, often accompanied by a slight smarting or burning sensation and a weakening of the system in a manner the patient cannot account for. On examining the urinary deposits, a ropy sediment will often be found, and sometimes small particles of albumen will appear, or the color will be of a thin, whitish hue, again changing to a dark, torpid appearance. There are many men who die of this difficulty, ignorant of the cause, which is the second stage of seminal weakness. DR. SPINNEY will Guarantee a Perfect Cure in such cases, and a healthy restoration of the genito-urinary organs.
