What Invention Has Done-

In the manufacture of boots and shoes the work of 500 operators is now done by 100.

In making breadboxes three workers can do the work of thirteen boxmakers by old methods.

In cutting out clothing and cloth caps with dies one worker does the work of three by old methods. In leather manufacture modern methods have reduced the necessary number of workers from 5 to 50 per

A carpet measuring and brushing machine with one operator will do the work of fifteen men by the old methods.

In the manufacture of flour mod-ern improvements save 75 per cent. of the manual labor that once was In making tin cans one man and a

boy with modern appliances can do the work of ten workers by the old process. One boy by machinery in turning wood-work and materials for musical

instruments performs the work of twenty-five men by the old methods. The horse power of steam used in the United States on railways, steamers, and in factories and mines was in 1888, 12,000,000, against I,610,000 in 1850.

In the manufacture of brick im proved devices save one-tenth of the labor, and in the manufacture of fire brick 40 per cent, of the manual labor is displaced. In stave-dressing twelve colabor-

ers with a machine can dress 12,000 staves in the same time that the same number of workers by hand could dress 2,500 staves. In nailing on shoe heels one worker and a boy with machinery can heel 300 pairs of shoes per day. It would require five workers to do the same

by hand. In the manufacture of carriages it used to take one man thirty-five days to make a carriage, It is now made by the aid of machinery with the

work of one man in twelve days. In the cotton mills in the United States the manual labor has been reduced about 50 per cent. Now one weaver manages from two to ten looms where one loom was formerly tended by one worker.
