What Electricity can Do.

The forest trees may be felled by a wire heated to a white heat by elec-tricity, and drawn through it, and it may afterward be cut into boards by the same means, thus doing the work of a circular saw. The only drawback would be in the fact that the wood would necessarily be charred by the passage of the bot wire. The estimated cost of maintaining a

sixteeu-candle-power incandescent lump for twenty-four hours, is about seven cents. There seems to be really nothing that electricity cannot do. It is now practically possible to see through iron or steel ingots and discover any flaws or bubbles in their interior. We do not see these flaws in the popular sense, but a curious little electrical instrument called the "Schiscophone" will indicate the exact spot in which they are located, which is just as good.
