THE FIRST STEAM FIRE ENGINE.

At the suggestion of the fire insurauce companies of New York city, a machinist named Paul Hodge, a resident of Gotham also, constructed a steam fire engine, which was first publicly tested in front of the New York city hall in March, 1841. It was a total failure. Then the board of directors offered a gold medal for the best method of applying steam to the propulsion of water for fire purposes. This prize was won by John Ericsson, the maker of the "Monitor," recently deceased and more recently removed to his native country. The official report has the following paragraph in regard to Ericsson's engine: "The oints of excellence, as thus narrowed down, were found to belong to an engine weighing less than two and one-half tons, which has the power of 108 men, and will throw 3,000 pounds of water per minute to a height of 105 feet through a nozzle of one and one-half inches in diameter.
