The success of the Port of Portland Commission in its endeavors to create a channel from the inland scaport to Astoria has not been as great as was at first confidently expected would be the case. Notwithstanding the enormous sums of money which have already been spent on the senseless undertaking, and in spite of the prevailing floods, the ships still continue to get aground while on the way down to Tongue Point, and such occurrences are noted in the Portland papers in this wise: "The British ship Cabul is anchored above Tongue Point." As matter of fact, both the Crofton Hall and the Cabul were aground on the hogback above Tongue Point and were only got off with considerable difficulty. The dike in the vicinity of Snag Island has been a monumental failure, all claims to the contrary notwithstanding, and has broken two or three times. The brush mats and the enormous quantities of rock have not availed, and the difficulty of building a break water which shall be permanent has not yet been overcome. The rock and brush are washed out almost as fast as they are placed in position, and the water in the Snag Island channel is shallower today than it was a year ago. Experience will probably show, after a few more millions have been spent on the construction(?) of the 25-foot channel, that Astoria is the e 25-foot channel, that Astoria is the all persons having claims against said estate will present them to me at my office in Astoria, Oregon, duly au-

A considerable amount of anxiety bas recently been caused, especially among corporations controlling waterworks, by the discovery that the passage of electric cars has a tendency to seriously injure the water pipes of a city by ASTORIA TO THE WORLD'S FAIR. causing electrolysis. At a meeting of a engineer stated that in some cases un der his observation lead pipes had entirely disappeared by the action of the Pacific dock.

G. W. LOUNSEFERY, Agent. attended the use of iron, galvanized Iron, brass, and "rustless" pipes. The corrosive action takes place where the current leaves the pipe, and not where er Fletcher. it enters it, and the phenomena mentioned were undoubtedly owing to the operation of electric cars. It is satisfactory to know that should the electrolysis of water pipes become so serlous a question as it is thought by some it may, a certain remedy, although it would increase the cost of water installations, would be the insulation of the conduits.

HE SAID NO MORE.

It was on the Common the other afternoon, and the actors were a welldressed young woman, leading a handsome and evidently much-petted black and tan terrier, and a nineteenth century creation in top coat, soft brown hat and galters to match. Mineing up to the former, the latter remarked: "I wish that I were your dog." "So do all the other pupples in town," was the quick response, and the breeze from

Beacon Hill blew down over the frog pond unvexed and undisturbed.

America's Great Danger

AN ENGLISH COMMENTARY.

Said an eminent English scientist recently: "The danger that confronts the great Ameri can people to-day is not the possible adop tion of a wrong financial policy for the nation, or the spread of socialism, or the increase of corruption among public men.
All these are bad enough, to be sure, but they are as nothing compared to the terrible national disease—I had almost said national crime-of overwork. The mad rush for wealth is set at a killing pace, and thousands fall by the way every year.
