It has been scientifically demonstrated that the so-called salmon, the steel-heads of Russian River, California, are not salmon, but trout, says an exchange President Jordan, of the Stanford University, has made a close examination of the fish and has declared that he is unable to find any structural differences between it and the common rainbow trout of California. It appears to be that the rainbow trout found in Russian River are the progeny of the steel-head, since no other fish than the steel-head spawns in that water. The young fish, known as trout, are of small size, but after a stay in salt water they return as steel-heads, weighing as high in some instances as sixteen pounds.

The society will meet again next Thursday evening at the same place. A long and most interesting program has been prepared, and a large attendance is expected. The subject of debate will be: "Which is mightier—the pen or the sword?" Ben Lee will speak in favor of the pen, and for the sword, E. Nandrop will exert his powers of argument. A. J. Johnson, who made such an efficient assistant superintendent for Oregon's forestry exhibit at the World's Fair, is interesting himself in the coming Midwinter Fair, and more particularly in how Oregon proposes to be represented there in the forestry exhibit. It is his intention to personally call upon all the millmen in the state, with a view to getting together an exhibit that will settle for all time the claims of this state for superiority. Mr. Johnson is determined, if possible, to have a suitable collection of lumber sent from this county, and expresses himself as confident that millowners and public spirited citizens generally will contribute toward this object according to their means. Heretofore California has stolen much of the credit that of right belongs to Oregon for the magnificent cedar grown in this state, much of which is shipped to San Francisco, where it is manufactured and transhipped East as of California growth.
