

What is CASTORIA

Castoria is Dr. Samuel Pitcher's prescription for Infants and Children. It contains neither Opium, Morphine nor other Narcotic substance. It is a harmless substitute for Paregoric, Drops, Soothing Syrup, and Castor Oil. It is Pleasant. Its guarantee is thirty years' use by Millions of Mothers. Castoria destroys Worms and allays feverishness. Castoria prevents vomiting Sour Curd, cures Diarrhoea and Wind Colic. Castoria relieves teething troubles, cures constipation and flatulency. Castoria assimilates the food, regulates the stomach and bowels, giving healthy and natural sleep. Castoria is the Children's Panacea—the Mother's Friend.

Castoria.
"Castoria is an excellent medicine for children. Mothers have repeatedly told me of its good effect upon their children."
Dr. G. C. Osgood,
Lowell, Mass.

Castoria.
"Castoria is so well adapted to children that I recommend it as superior to any prescription known to me."
H. A. Archer, M. D.,
111 So. Oxford St., Brooklyn, N. Y.

"Our physicians in the children's department have spoken highly of their experience in their outside practice with Castoria, and although we only have among our medical supplies what is known as regular products, yet we are free to confess that the merits of Castoria has won us to look with favor upon it."
UNITED HOSPITAL AND DISPENSARY,
Boston, Mass.

KARL'S CLOVER ROOT will purify your blood, clear your complexion, regulate your Bowels, and give you a clear skin as a result. 25 cts., 50 cts., and \$1.00. Sold by J. W. Conn.

Children Cry for Pitcher's Castoria.
The marine column of yesterday's Oregonian contains the following telegram from Queensland: "The British bark *Shrieston*, Captain Lewis, has arrived from Portland, Or., and reports that in latitude 37° south, longitude 15° west, he passed the hull of a large iron ship painted black with white ports, which evidently had been on fire. The name of the ship was invisible. The name of the ship ought to have been invisible, but 'is' is 'it'. That latitude would take a man several dozen times around the Antarctic regions and back again."

Tide Table for June, 1935.

ALONG THE WATER FRONT.

The *St. Louis* is due from San Francisco today.
The *Harrison* will leave for Tillamook on Saturday morning.
Three carloads of salmon were taken up the river last night on the *Potter*.
The Electric went over to Gray's Bay yesterday afternoon for a run of logs.
The Bathdown will begin loading salmon again today. She has already taken aboard 10,429 cases.
The Portland steamer *Phigra* and Uncle Sam are both tied up at the Astoria Iron Works awaiting small repairs.
The steamer *Queen* will bring in a cowload of pottery clay from the Lewis and Clark yesterday. It will be taken up to Portland.
The *Portland* steamer *Phigra* and Uncle Sam are both tied up at the Astoria Iron Works awaiting small repairs.

The British bark *Drumrock* cleared from Puget Sound yesterday for the United Kingdom with a cargo of wheat valued at \$87,000.
G. W. Simpson, steward on the *Harvest Queen*, left that steamer yesterday to superintend the fitting out of the cabin and dining rooms of the *Thompson*.
If any more ships are reported outside, too far out for other vessels to catch, they ought to be bulletined, on speculation, as the *Flying Dutchman*.

According to reports brought to this city by the schooner *Surprise* there are very few seals now in localities where a few years ago many thousands were encountered.
The *Mayflower* went down to Fort Canby yesterday. It was busy all afternoon loading up for the trip to the island. The artillerymen at the Fort were blowing away at gun practice for several hours.
The rigging for the forecastle part of the *Rathdown* will be here from San Francisco today and a topmast yard and royal yard will be here from Portland for the time being on the *Potter* this afternoon.
The *Lancelotti* was busy surveying all yesterday morning near the head of Sand Island. In the afternoon she went up in the vicinity of Cementville, Point Ellice and Hungry Harbor, and did considerable work in the various channels.

The British bark *Gulf Stream*, 1275 tons burden, 123 days from California, arrived in last evening. Her certain reports a fair voyage with all her crew of 22 men well, and no incidents worthy of special note during the trip. She is consigned to Balfour, Guthrie & Co.
The boom of the *Rathdown* being now repaired at the *Astoria Iron Works*, which weighs five tons and is made of hollow steel only, is considerably heavier than any solid wood boom of the same proportions would be. A wooden boom, however, would have a great advantage in the way of being able to be replaced by the blow that dented the plates of the steel part.
Yesterday afternoon just before teaching *Flavel's* when the Mendell blew out one of her staybolts. She will have to lay up today, and the boiler will be attended to by the crew of the *Astoria Iron Works*. The Mendell's towing today will be attended to by the Lincoln. She will be ready for business again by tomorrow morning.

The South Bend Journal says: The *Barclay* Tam O'Shanter went to sea last Sunday with a cargo of lumber for San Francisco. The theory that the closing of *Ma'boat* through the government is deepening the water on the Malibu beach bar is proven by the fact that this vessel is drawing 17½ feet and plenty of water to spare at less than high tide.
The O. R. and N. steamer *North Pacific* will be in port last night and tied up at the O. R. and N. dock. She will probably leave up the river for Portland this morning and will at once go to the home port for repairs and cargo loading. In appearance she resembles the *Potter*, being somewhat smaller, and with the difference that she has a walking beam steamship.

The accident to the steamer *State* of Washington on Puget Sound is much more serious than was at first supposed. The spokes of the wheel were nearly rotted off, and some of them have fallen by their own weight, since the cross pieces were taken off. She will probably be drydocked at Seattle, for general repairs, and will require new spokes and buckets to the wheel, which are being put in at the *Yoster* yard.
The marine column of yesterday's *Oregonian* contains the following telegram from Queensland: "The British bark *Shrieston*, Captain Lewis, has arrived from Portland, Or., and reports that in latitude 37° south, longitude 15° west, he passed the hull of a large iron ship painted black with white ports, which evidently had been on fire. The name of the ship was invisible. The name of the ship ought to have been invisible, but 'is' is 'it'. That latitude would take a man several dozen times around the Antarctic regions and back again."

United States Inspectors Edwards and McDermott have sent the following notice to the captains and owners interested in the matter: "You are hereby respectfully informed that an investigation will take place at this office commencing on Wednesday, June 26, at 9 a. m., as to the cause of the collision between the steamers *Harvest Queen* and *Luzina*, occurring May 9, 1935. You may bring any witnesses you may have to testify in the case. It is to be hoped that the result of this investigation will set at rest for good the bitterness that has existed for several years between the captains of these steamers. The question of where the blame has been placed for some time by several water front people in this city, and it is to be hoped that every opportunity will be given the inspectors at the examination to get at the true facts."

THE DEMOCRATIC MORSE.

Whitney Backed by the Administration for the Presidency.
Chicago Times-Herald.
William C. Whitney will be the administration candidate for president. It is said Mr. Whitney, that the conservative forces of the democratic party have to defeat the threatened nomination of Adlai Stevenson and avert the danger of a party split. Grover Cleveland and William C. Whitney have not met in more than two years, and though they have never quarreled there has been an interruption of the old time friendly relations. The two great democrats will meet in a few weeks and talk over the past and the future. Mr. Whitney will invite Mr. Whitney to visit him at Gray Gables, and Mr. Whitney will accept. Already there is a tacit understanding between them, and they met at Buzzard's Bay, the task of completing the reconciliation will be a very simple one. All that will be necessary is a warm shake of the hand and a "hello-are-you." It is scarcely necessary to add that all the preliminaries have been carefully attended to by the skillful hands of Secretary Lamont.
President Cleveland has no third term ambition. He is tired of public life. He wants rest, domestic peace, the pleasure of travel, the joy of spending untroubled days with his family, and the care of the state. He knows as well as any one does that the only party that would be willing to place him in nomination would be a fading democratic party. A party that had sloughed off from the main body because the main body had declared for free silver. Mr. Cleveland knows this better than any one else. Mr. Whitney will not be so much the candidate of the administration as of those conservative democrats who want to see free silver declared a law and the disruption of the party in consequence. In other words, Whitney is coming forward as the choice of the elements which are already in a state of secession and destruction because it is yet worth saving, and the administration is conspicuous among these elements.
President Cleveland is turning toward Whitney as a successor, not wholly on account of old friendship or gratitude for what Whitney did for him three years ago, but because he is the only man left in the man to hold the democratic party together and lead it to success. As the democratic situation is viewed in this way, it is not surprising that Whitney is the man to hold the democratic party together and lead it to success. As the democratic situation is viewed in this way, it is not surprising that Whitney is the man to hold the democratic party together and lead it to success.

The heavy-end of a match.
"Mary," said Farmer Flint at the breakfast table as he asked for a second cup of coffee, "I've made a discovery. I'd tell you, you're about the last one I'd expect of such a thing, but what is it?"
"I have found that the heavy end of a match is the light end," responded Cyrus as a grin that would have adorned a monkey.
Mary looked disgusted, but with an air of triumph quickly retorted, "I've got a discovery, too, Cyrus. It was made by Dr. W. H. Simpson, a doctor from Golden Medical Discovery." It drives away blotches and pimples, purifies the blood, tones up the system and makes one feel brand new. Why, your cousin Ben, who had consumption and was almost reduced to a skeleton. Before his wife began to use it she was a pale, sickly thing, but look at her, she's rosy-checked and healthy, and weighs 165 pounds. That, Cyrus, is a discovery that's worth mentioning."
Young or middle-aged men, suffering from premature decline of power, however induced, speedily and radically cured by the use of *Dr. W. H. Simpson's* Medical Discovery. World's Dispensary Medical Association, Buffalo, N. Y.

When *Bowly* was sick, we gave her *Castoria*.
When she was a child, she cried for *Castoria*.
When she became Miss, she clung to *Castoria*.
When she had children, she gave them *Castoria*.
A MOST MAGNIFICENT HEIRLOOM
Is health. No gem in tiara or coronet is so precious. Per contra, a hereditary tendency to disease, often proves a fatal legacy, since the most trifling cause may bring down the curtain of death and render the fruitage deadly. An inherent transmitted weakness of the physical constitution is more effectually opposed and countered by *Hostetter's Stomach Bitters* than by any other safeguard. Digestion and assimilation promoted, due biliary secretion, action of the kidneys and bladder increased, are so many guarantees of permanent health, and these are the consequences, among others of like importance, of a resort to the *Bitters*. The medicine also prevents and remedies malumular complaints, nervousness, chronic insomnia, rheumatism and neuralgia. Such warnings as loss of appetite and indigestion, are not to be neglected. The *Bitters* will restore both without fail.
OLD PEOPLE
Old people who require medicine to regulate the bowels and kidneys find the true remedy in *Electric Bitters*. This medicine does not stimulate and contains no intoxicant, but acts as a tonic and energizer to the stomach and bowels, adding strength and giving tone to the organs, thereby adding years to the performance of the functions. It cures biliousness, indigestion and adds vigor. Old people find it just exactly what they need.
CHARMS, ANCIENT AND MODERN.
A belief in charms must be reckoned amongst those strange things which belong to the mystic borderland where the finite and infinite meet, says the writer of a course of lectures on the occult. From time immemorial charms and amulets have been sought by all nations. And while the rich have set their beliefs on gold and jewels, the poor have contented themselves with coarser mediums. If you cannot have a curious to give you good health you may at least avoid courting it by buying a charm or amulet of the new moon. No doubt the health thus secured will scarcely be of the double-distilled turquoise kind, but it will serve your purpose.
Drunkness can be averted by amethysts, and (according to reliable writers) by amethysts alone. This is regrettable, of course, as it is an error to believe that amethysts have any such power. Amethysts, however, are free to all—that of abstinence and there is little doubt that its effects are even superior to the amethystine charm above referred to. But people do not take it to kindly.
It has become the habit to make useless little appendages of gold, coral, jewels, etc. and to call them charms. The fashion dates from the Rue Rivoli, which may offer slight imitations. It is absurd to suppose that charms can be created by the gross, and it is evidence of reverence to expect to purchase them for 25 cents each.
All kinds of magic are out of date, and don't assist with except in India, writes Rudyard Kipling, "where nothing changes in spite of the shiny, top-sun-stuff people call civilization."
An Indian says, "Intestine" is worn by women to secure the accomplishment of their wishes. This is not the first time that we have heard of feminine charms insuring the effect.
When the plague raged at its height in London the miserably and terror-stricken people clutched wildly at the smallest hope of escape, and charms and amulets became a religion to the more ignorant. Many wore the initials I. H. S., which De Poe "the Jesuit's mark" (7). Others preferred a 3-headed cross. But the most favored charm was the word Abracadabra formed in a triangle or pyramid.
EXTRAORDINARY GRATITUDE.
Convallescent—Doctor, what is your bill? Physician—One hundred dollars, ma'am.
Convallescent (sighing)—I am sure I can never be grateful enough to you, doctor. If it had not been for your care, I should have been a long time in the hospital. I should have been a long time in the hospital. I should have been a long time in the hospital.

FARM NOTES.

Great bones, pounded fine, are more suitable for laying hens at this season than grain, and will enable the fowls to produce more eggs than when grain is used.
I would not keep a cow on my farm that would not care the \$50 a year with butter at 20 cents a pound. Some of my cows the past year have earned over \$50 at the creamery—Gov. Barnard says.
A one-acre garden planned to produce crops and properly attended will produce a large amount of crops at a good profit—much more than the family would need or could consume.
From a dairy averaging fifteen cows, S. M. Hood, of Topsham, Vt., shows the following record for one year: Milk, 71,717; butter, 1,523.93. This brought \$72.38. Average test of milk, 4.0%. He has also sold \$40 worth of eggs and \$20 worth of calves raised on the farm milk.
A horseman gives the following advice: Avoid the luteal heat; breed the best; breed none but the best; breed from the best; but your best, and look out sharp to improve on the next crop, and whenever your dam is bred be sure the sire you lose is not lacking in the same point, and if possible not lacking in any essential qualification.
Last year horses were cheap and farmers desired that never again would good prices be obtained, as there was less demand in the cities since electricity supply planted the car horse. The farmers who continued to breed horses, however, made a mistake, for already prices for work horses have gone up.
Oil is the cheapest substance to use on the farm just now, as it saves wear of implements. Have several oil cans at convenient places, so as not to be compelled to hunt for one. Neglect to use a cent's worth of oil may cause a loss of several dollars. Oil also saves labor by rendering the working of the implements much easier.
When a young tree does not grow and the leaves are yellowish instead of green, dig down to the roots and endeavor to discover if some insect or parasite is not working under ground. Then dig away plenty of dirt and drench the roots with a strong soap suds, to which should be added a few pounds of unbleached wood ashes, or put the ashes in after drenching the roots. It will not injure the tree and may prove of great benefit.

WOUNDS ON TREES OR PLANTS.
The wounds made on growing plants or trees should always be protected by some material as soon as they become dry enough for it to adhere well. Common paint is better than neglect, but any cement of the character of grafting wax is better. One of the best substances for both its neatness and its long adhesion to the surface of the wound, is the well known shellac varnish, consisting of a strong solution of shellac in alcohol. To prevent the neglect which so often occurs because the owner has nothing of the kind on hand it is well to have such a preparation made in time.
Procure a wide-mouthed bottle and insert a brush to be used in applying it by making the cork a part of the handle. This will prevent drying up and it will be always ready.
Those who have time to attend to it may use the turpentine and resin mixture by using a half pound of resin and a pound of turpentine, adding a spoonful of turpentine when it is cool, with two ounces of alcohol and an ounce of water, heating again and stirring rapidly. This is a good application, but is not so delicate for the plants as the shellac. If it becomes too thick add alcohol.

DEEP PLOWING.
It is commonly said that plowing deep is the direct means of making the soil rich. It is true that deep plowing opens a lower stratum to the action of air, but this only hastens the decomposition of vegetable matter in the soil, and if this is not replaced the soil becomes so deficient in humus that deep plowing is useless. There is no better way to do pen soil than to sow clover and every third or fourth year use the subsoil plow as it can be run. This will break up the clover roots to penetrate the soil to a greater depth. Whenever a clover soil is plowed a considerable part of its lower soil is left in the soil as they grow. These roots rapidly decay and they enable the roots of grain and other crops to go down deeply in search of moisture. This is one reason why a deep plow on a clover soil will withstand drought better than if planted on timothy soil, whose roots are all near the surface. To make the clover soil as large as possible in all important, the larger the growth the deeper the clover roots run and the more the subsoil is benefited.

NO MORE CRINOLINES.
We had hoped better things of fashion, but nothing seems to be able to stop her on the road of extravagance down which she is slipping. Skirts and sleeves are getting more and more ample. Skirts are pyramidal, and a large-sized pillow would be within the folds of a halloo sleeve. One thing, however, saves modern fashion from being utterly ungrateful—stiffness is banished, skirts hang in soft folds, sleeves are loosely draped without a suspicion of crinolines or buckram. In fact, in this consists the novelty of the season's toilets. They repudiate all stiff trimmings, and the triumph of a good modiste is to accumulate hollow plates and drooping folds without the aid of any artificial support. Of course there must be undergarments, and we shall certainly return to the use of starched petticoats, but the dress itself stands on the strength of its own material. The only things used are the silk or acetate—Young Ladies' Journal.

A NEW JAPANESE SHADE.
A French woman of fashion has invented a beautiful shade of electric lights. She got her inspiration from the falling of a sunbeam on a beaded Japanese screen, and full of the idea, she substituted an electric fan for the screen. The shades were drawn, the beaded Japanese cloth was thrown around the bulb of an incandescent lamp, and when the current was turned on the effect was exquisite. The light was soft and of a thousand shafts of colored radiance. An attachment was produced after the design of the Japanese cloth and the new shade at once became the rage. An American electrician who has brought the design over here has improved on the original idea by turning on different mixtures of grapes, purple and yellow, and other flowers glistening with dewdrops.—New York Times.

UNREASONABLE DEMAND.
"Haven't you any napkins?" asked the guest at the Muddy Gulch restaurant. "Napkins?" exclaimed the waiter. "Ain't the table cloth good enough for you, mister?"
CURE TAKE THE BEST THAT NATURE GIVES YOU. SHILO'S CURE. It is sold on a guarantee by all druggists. It cures diphtheria, croup, whooping cough, and all throat troubles. For sale by J. W. Conn.

PROFESSIONAL CARDS.

E. A. SMITH
