Among the inventions on exhibition at Atlanta was a draw sewing machine, the product of Miss Mary P. Carpenter Hooper of Inventive genius. It was the first machine of its kind that could make four buttonholes at once, without taking it from the machine.

Major Post came down the river with the Cascades yesterday, after a three days' tour of inspection along the various bars and other shallow spots between Portland and this city. After reaching here he took a trip down to the city, though he did not go out to the river end of the work. The object of the major's trip here was to satisfy himself of the result of the dredging operations carried on during the past season and to obtain reliable data for his office records.

He was visited by an Astorian representative, who asked him to expect him to come again Friday evening with the outcome of his inspection. He said:

"I have found on all the bars a good twenty feet of water and I consider that the dredging work during the present season has been done well. The government has not yet decided what disposition will be made of the dredge for the winter season, although I understand that it is destined to be used again for the winter season.

The Cascades will take me up to Portland tomorrow morning and will then be laid up in that city for the winter. It has not yet been decided what disposition will be made of the dredge for the winter season, although I understand that it is destined to be used again for the winter season.

The Cascades has done most excellent work. She has carried down to the jetty during the present year 25,000 tons of sand and gravel, and has cost about \$10,000, unless there happens to be a slight sinking of the present season's dredging.

This, however, I do not think probable, as we have been guided by past experience. Major Post's report of the dredging work will be submitted to the government for the winter season.
